PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY

CONTENTS

Vol. 144, No. 9 Whole No. 687 September 2016

A. ALGEBRA, NUMBER THEORY, AND COMBINATORICS

Botong Wang, Maximum likelihood degree of Fermat hypersurfaces via Euler characteristics ................................................................. 3649
Katsuhisa Furukawa, Convex separably rationally connected complete intersections ................................................................. 3657
Alain Couvreur, An upper bound on the number of rational points of arbitrary projective varieties over finite fields .......................... 3671
Byungchan Kim, Subong Lim, and Jeremy Lovejoy, Odd-balanced unimodal sequences and related functions: parity, mock modularity and quantum modularity .......................................... 3687
Tri Lai, Jörg Endrullis, and Lawrence S. Moss, Majority Digraphs ...... 3701
Stefan Patrikis, Mumford-Tate groups of polarizable Hodge structures ... 3717

B. ANALYSIS

Congming Li and John Villavert, A degree theory framework for semilinear elliptic systems ................................................................. 3731
Nesrine Kamouche and Abdallah Benaissa, Asymptotic expansion of double Laplace-type integrals: The case of non-stationary minimum points ...... 3741
Mário Bessa, Sérgio Dias, and Alberto A. Pinto, Explosion of differentiability for equivalencies between Anosov flows on 3-manifolds ......................... 3757
Carla Farsi and Elizabeth Gillaspy, Twists over étale groupoids and twisted vector bundles ................................................................. 3767
Gökalp Alpan and Alexander Goncharov, Orthogonal polynomials for the weakly equilibrium Cantor sets ........................................... 3781
A. Alexandrou Himonas and Dionyssios Mantzavinos, An ab-family of equations with peakon traveling waves ......................................... 3797
Andrzej Wiśnicki and Jacek Wośko, Uniformly Lipschitzian group actions on hyperconvex spaces ...................................................... 3813
Albrecht Seelmann, Notes on the subspace perturbation problem for off-diagonal perturbations ................................................................. 3825
Marek Cúth, Michal Douha, and Przemysław Wojtaszczyk, On the structure of Lipschitz-free spaces ............................................. 3833
P. Foulon and R. Ruggiero, A first integral for $C^\infty$, k-basic Finsler surfaces and applications to rigidity ......................................................... 3847
Ángel Arroyo and José G. Llorente, On the asymptotic mean value property for planar p-harmonic functions .............................................. 3859
José M. Conde-Alonso and Luis Daniel López-Sánchez, Operator-valued dyadic harmonic analysis beyond doubling measures ......................... 3869
Matthias Leuenberger, (Volume) density property of a family of complex manifolds including the Koras-Russell cubic threefold ......................... 3887
Luca Lorenzi, Alessandra Lunardi, and Roland Schnaubelt, Strong convergence of solutions to nonautonomous Kolmogorov equations ........ 3903
Arthur A. Danielyan, A theorem of Lohwater and Piranian ...................... 3919
Swarup N. Ghosh, Isolated point theorems for uniform algebras on two- and three-manifolds ................................................................. 3921
Mathieu Meyer and Shlomo Reisner, The isotropy constant and boundary properties of convex bodies ............................................. 3935
Corentin Léna, Courant-sharp eigenvalues of the three-dimensional square torus 3949
Simon Bortz and Steve Hofmann, A singular integral approach to a two phase free boundary problem ........................................... 3959
Ioannis D. Platis, Modulus of revolution rings in the heisenberg group ........ 3975
Sylwester Zajac, Hypercyclicity of composition operators in Stein manifolds ... 3991

D. GEOMETRY
Ezequiel Barbosa and Yong Wei, The length of the shortest closed geodesic in a closed Riemannian 3-manifold with nonnegative Ricci curvature ............ 4001
Gerardo Arizmendi, Rafael Herrera, and Noemi Santana, Almost even-Clifford hermitian manifolds with a large automorphism group ............. 4009

E. LOGIC AND FOUNDATIONS
Tin Lok Wong, Interpreting Weak König’s Lemma using the Arithmetized Completeness Theorem ................................................. 4021
Martin Goldstern, Diego Alejandro Mejía, and Saharon Shelah, The left side of Cichoń’s diagram ............................................. 4025

F. STATISTICS AND PROBABILITY
Péter Kevei and David M. Mason, On the Breiman conjecture ................. 4043

G. TOPOLOGY
Qihan He and Shuangjie Peng, Synchronized vector solutions to an elliptic system ............................................................... 4055
A. V. Arhangel’skii and J. van Mill, Nonhomogeneity of remainders ........ 4065
Jair Remigio–Juárez, The link volume of 3-manifolds is not multiplicative under coverings ..................................................... 4075
Itaï Ben Yaacov and Julien Melleray, Isometrisable group actions ............ 4081
Zhongtao Wu, A cabling formula for the $\nu^+$ invariant .......................... 4089
Irakli Patchkoria and Steffen Sagave, Topological Hochschild homology and the cyclic bar construction in symmetric spectra ..................... 4099
Editorial Information

To be published in the Proceedings, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors solicit and encourage publication of worthy papers of length not exceeding 15 published pages. Published pages are the same size as those generated in the style files provided for \texttt{AMS-\LaTeX}.

Information on the backlog for this journal can be found on the AMS website starting from \url{http://www.ams.org/proc}.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer reviewed. The AMS has a single blind peer-review process in which the reviewers know who the authors of the manuscript are, but the authors do not have access to the information on who the peer reviewers are. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at \url{www.ams.org/submission/proc} or send one copy of the manuscript to the following address: Centralized Manuscript Processing, PROCEEDINGS OF THE AMS, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for \textit{Proceedings} and include the name of the corresponding author, contact information such as email address or mailing address, and the name of an appropriate Editor to review the paper (see the list of Editors below).

The first page of an article must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence and at most 150 words. Included with the footnotes to the paper should be the 2010 \textit{Mathematics Subject Classification} representing the primary and secondary subjects of the article. The classifications are accessible from \url{www.ams.org/msc/}. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest \textit{Mathematical Reviews} annual index. The series abbreviations are also accessible from \url{www.ams.org/msnhtml/serials.pdf}. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at \url{www.ams.org/mrlookup/}.

Electronically prepared manuscripts. Manuscripts should be electronically prepared in \texttt{AMS-\LaTeX}. To this end, the Society has prepared \texttt{AMS-\LaTeX} author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the \texttt{AMS-\LaTeX} style file and the \texttt{\label} and \texttt{\ref} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for \textit{Proceedings of the AMS} from \url{www.ams.org/proc/procauthorpac.html} or via FTP to \url{ftp.ams.org} (login as anonymous, enter your complete email address as password, and type \texttt{cd pub/author-info}). The \textit{AMS Author
Handbook and the Instruction Manual are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the Web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/authors/journals.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

AMS policy on making changes to articles after publication. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information such as affiliation, current address, and email address up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the Web through links from the manuscript tracking screen. Questions can be sent to proc-query@ams.org.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to proc-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
Editors

The AMS uses Centralized Manuscript Processing for initial submissions to AMS journals. Authors should follow instructions listed on the Initial Submission page found at www.ams.org/proc/procsubmit.html.

Managing Editor: Ken Ono, Emory University, Atlanta, GA 30322 USA; e-mail: ono@mathcs.emory.edu

1. ODE, PDE, GLOBAL ANALYSIS, AND DYNAMICAL SYSTEMS

Coordinating Editor: Nimish Shah, The Ohio State University, Columbus, OH 43210 USA; e-mail: shah@math.osu.edu

Ergodic theory and dynamical systems, Nimish Shah

Global analysis, Guofang Wei, University of California, Santa Barbara, Santa Barbara, CA 93106-3080 USA; e-mail: wei@math.ucsb.edu

Ordinary differential equations and dynamical systems, Yingfei Yi, School of Mathematics, Georgia Institute of Technology, Atlanta, GA 30332-0001 USA; e-mail: yi@math.gatech.edu

Partial differential equations, Joachim Krieger, École Polytechnique Fédérale de Lausanne, Bâtiment des Mathématiques Station 8, CH-1015 Lausanne, Switzerland; e-mail: joachim.krieger@epfl.ch

Representation theory and algebraic geometry, Alexander Braverman, University of Toronto, Toronto, ON, Canada; and Perimeter Institute, Waterloo, ON, Canada; e-mail: braval@math.toronto.edu

2. TOPOLOGY AND GEOMETRY

Coordinating Editor: Michael Wolf, Rice University, Houston, TX 77005-1892 USA; e-mail: mwolf@rice.edu

Algebraic topology, Michael A. Mandell, Indiana University Bloomington, Bloomington, IN 47405 USA; e-mail: mmandell@indiana.edu

Differential geometry, Lei Ni, University of California, San Diego, La Jolla, CA 92093 USA; e-mail: lni@math.ucsd.edu; lni.math.ucsd@gmail.com

Geometric analysis, Michael Wolf

Geometric topology, Ken Bromberg, University of Utah, Salt Lake City, UT 84112, USA; e-mail: bromberg@math.utah.edu

Geometric topology and knot theory, David Futer, Temple University, Philadelphia, PA 19122, USA; e-mail: dfuter@temple.edu

3. ANALYSIS

Coordinating Editor: Mei-Chi Shaw, University of Notre Dame, Notre Dame, IN 46556-0398 USA; e-mail: mei-chi.shaw.1@nd.edu

Banach spaces and linear functional analysis, Thomas Schlumprecht, Texas A&M University, College Station, TX 77843-3368 USA; e-mail: schlump@math.tamu.edu

Geometric function theory, Jeremy Tyson, University of Illinois, Urbana, IL 61801 USA; e-mail: tyson@math.uiuc.edu

Harmonic analysis, Alexander Iosevich, University of Rochester, Rochester, NY 14627 USA; e-mail: iosevich@math.rochester.edu

Harmonic analysis and linear partial differential equations; geometric measure theory and its applications, Svitlana Mayboroda, Department of Mathematics, University of Minnesota, Minneapolis, MN 55455 USA; e-mail: svitlana@math.umn.edu

Microlocal analysis and spectral theory, Michael Hitrik, University of California, Los Angeles, Los Angeles, CA 90095-1555 USA; e-mail: hitrik@math.ucla.edu
Operator algebras, Adrian Ioana, Department of Mathematics, University of California, San Diego, La Jolla, CA 92093 USA; e-mail: aioana@math.ucsd.edu

Operator theory and spaces of holomorphic functions, Stephan Ramon Garcia, Pomona College, Claremont, CA 91711 USA; e-mail: stephan.garcia@pomona.edu

Several complex variables, Franc Forstneric, University of Ljubljana, Jadranska 19, 1000 Ljubljana, Slovenia; e-mail: franc.forstneric@fmf.uni-lj.si

4. ALGEBRA, NUMBER THEORY, COMBINATORICS, AND LOGIC

Coordinating Editor: Pham Huu Tiep, University of Arizona, Tucson, AZ 85721-0089 USA; e-mail: tiep@math.arizona.edu

Algebraic and arithmetic geometry, Lev Borisov, Rutgers University, Piscataway, NJ 08854 USA; e-mail: borisov@math.rutgers.edu

Algebraic number theory and arithmetic geometry, Romyar T. Sharifi, University of Arizona, Tucson, AZ 85721-0089 USA; e-mail: sharifi@math.arizona.edu

Automorphic and modular forms, Kathrin Bringmann, Mathematisches Institut der Universität zu Köl n, D-50931 Köl n, Germany; e-mail: kbringma@math.uni-koeln.de

Combinatorics, Patricia L. Hersh, North Carolina State University, Raleigh, NC 27695-8205 USA; e-mail: plhersh@ncsu.edu

Commutative algebra, Irena Peeva, Cornell University, Ithaca, NY 14853 USA; e-mail: irena@math.cornell.edu

Commutative algebra, noncommutative algebra and invariant theory, Jerzy Weyman, University of Connecticut, Storrs, CT 06269 USA; e-mail: jerzy.weyman@uconn.edu

Group theory, Pham Huu Tiep

Lie algebras and quantized enveloping algebras, Kailash C. Misra, North Carolina State University, Raleigh, NC 27695-8205 USA; e-mail: misra@math.ncsu.edu

Logic and foundations, Mirna Džamonja, School of Mathematics, University of East Anglia, Norwich, United Kingdom; e-mail: h020@uea.ac.uk

Number theory, Matthew A. Papanikolas, Texas A&M University, College Station, TX 77843-3368 USA; e-mail: map@math.tamu.edu

5. APPLIED MATHEMATICS, PROBABILITY, AND STATISTICS

Coordinating Editor: Mark M. Meerschaert, Department of Probability and Statistics, Michigan State University, East Lansing, MI 48823 USA; e-mail: mcubed@stt.msu.edu

Applied probability and statistics, David Levin, University of Oregon, Eugene, OR 97043-1221 USA; e-mail: dlevin@oregon.edu

Integrable systems and special functions, Mourad Ismail, Department of Mathematics, University of Central Florida, Orlando, FL 32816 USA; and King Saud University, Riyadh, Saudi Arabia; e-mail: mourad.eh.ismail@gmail.com

Sergei K. Suslov, School of Mathematical and Statistical Sciences, Arizona State University, Tempe, AZ 85287-1807 USA; e-mail: sks@asu.edu

Nonlinear partial differential equations, Catherine Sulem, University of Toronto, 40 St. George Street, Bahen Center, Toronto, ON, Canada; e-mail: sulem@math.toronto.edu

Probability, Mark M. Meerschaert

Special functions and approximation theory, Walter Van Assche, Katholieke University Leuven, Celestijnenlaan 200B, Leuven, Belgium; e-mail: walter.vanassche@wis.kuleuven.be
