PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY

CONTENTS

Vol. 145, No. 11 Whole No. 701 November 2017

A. ALGEBRA, NUMBER THEORY, AND COMBINATORICS

Izzet Coskun, Donghoon Hyeon, and Junyoung Park, Castelnuovo-Mumford regularity and Bridgeland stability of points in the projective plane ............. 4573

J. Awang, M. Pfeiffer, and N. Ruškuc, Finite presentability and isomorphism of Cayley graphs of monoids ........................................... 4585

Nik Weaver, A “quantum” Ramsey theorem for operator systems ............... 4595

N. K. Meher, K. Senthil Kumar, and R. Thangadurai, On a theorem of Mahler ............................................................................. 4607

W. D. Brownawell and D. W. Masser, Unlikely intersections for curves in additive groups over positive characteristic ........................................ 4617

June Huh and Botong Wang, Lefschetz classes on projective varieties ......... 4629

Giorgis Petridis, Pinned algebraic distances determined by Cartesian products in \( \mathbb{F}_p^2 \) .................................................................................. 4639

Eric Ramos, Generalized representation stability and \( \text{FI}_d \)-modules ........ 4647

Saeed Nasseh and Sean Sather-Wagstaff, Vanishing of Ext and Tor over fiber products ............................................................................. 4661

Rob Egrot, Non-elementary classes of representable posets .......................... 4675

Emre Coskun and Ozhan Genc, Ulrich bundles on Veronese surfaces .......... 4687

Krishnendu Gongopadhyay and Sean Lawton, Invariants of pairs in \( SL(4,\mathbb{C}) \) and \( SU(3,1) \) ................................................................. 4703

Piotr Achinger and Maciej Zdanowicz, Some elementary examples of non-liftable varieties .................................................................. 4717

Guillaume Rond and Bernd Schober, An irreducibility criterion for power series .................................................................................. 4731

B. ANALYSIS

Eliel J. C. dos Santos, Monotonicity of zeros of Jacobi-Angelesco polynomials . 4741

André Junqueira, Quantitative recurrence for generic homeomorphisms ........ 4751

Haijun Hu and Xingfu Zou, Existence of an extinction wave in the Fisher equation with a shifting habitat ........................................... 4763

M. Cristina Cerutti and Anna Piro Grimaldi, Maximal and minimal solutions of second order elliptic and parabolic equations in non-divergence form with measurable coefficients ........................................ 4773

Francisco Odair de Paiva, Wojciech Kryszewski, and Andrzej Szulkin, Generalized Nehari manifold and semilinear Schrödinger equation with weak monotonicity condition on the nonlinear term ............................. 4783

Dominic Enders, Subalgebras of finite codimension in semiprojective \( C^* \)-algebras 4795

Weichao Guo, Huoxiong Wu, and Guoping Zhao, Inclusion relations between modulation and Triebel-Lizorkin spaces ............................. 4807

D. Alpay, P. Cerejeiras, and U. Kähler, Gleason’s problem associated to the fractional Cauchy-Riemann operator, Fueter series, Drury-Arveson space and related topics .................................................. 4821

Lloyd N. Trefethen, Multivariate polynomial approximation in the hypercube . 4837

Ismail Kombe and Abdullah Yener, Weighted Rellich type inequalities related to Baouendi-Grushin operators ........................................... 4845

Benjamin Dodson and Jason Murphy, A new proof of scattering below the ground state for the 3d radial focusing cubic NLS .............................. 4859
Evgeny Korotyaev and Natalia Saburova, Schrödinger operators with guided potentials on periodic graphs ........................................ 4869
Nguyen Lam, Maximizers for the singular Trudinger-Moser inequalities in the subcritical cases ............................................................ 4885
Ling Zhang and Shangjiang Guo, Slowly oscillating periodic solutions for a nonlinear second order differential equation with state-dependent delay .... 4893
Jonathan M. Fraser and Thomas Jordan, The Assouad dimension of self-affine carpets with no grid structure .................................................. 4905
John T. Anderson and Alexander J. Izzo, Localization for uniform algebras generated by real-analytic functions ............................................ 4919

C. APPLIED MATHEMATICS

Mihai Ciucu, Gaps in dimer systems on doubly periodic planar bipartite graphs 4931

D. GEOMETRY

Ezequiel Barbosa, Ben Sharp, and Yong Wei, Smooth compactness of f-minimal hypersurfaces with bounded f-index ...................................... 4945
Chong Song, Gauss map of the skew mean curvature flow .............................. 4963

E. LOGIC AND FOUNDATIONS

Menachem Magidor and Dima Sinapova, Singular cardinals and square properties .............................................................. 4971

G. TOPOLOGY

Tomás Ibarlucea and Julien Melleray, Dynamical simplices and minimal homeomorphisms ................................................................. 4981
Javier Aramayona, Ariadna Fossas, and Hugo Parlier, Arc and curve graphs for infinite-type surfaces ...................................................... 4995
Helge Glöckner, Elementary p-adic Lie groups have finite construction rank ... 5007
Editorial Information

To be published in the Proceedings, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors solicit and encourage publication of worthy papers of length not exceeding 15 published pages. Published pages are the same size as those generated in the style files provided for \texttt{AMS-\LaTeX}.

Information on the backlog for this journal can be found on the AMS website starting from \url{http://www.ams.org/proc}.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer reviewed. The AMS has a single blind peer-review process in which the reviewers know who the authors of the manuscript are, but the authors do not have access to the information on who the peer reviewers are. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at \url{www.ams.org/submission/proc} or send one copy of the manuscript to the following address: Centralized Manuscript Processing, PROCEEDINGS OF THE AMS, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for Proceedings and include the name of the corresponding author, contact information such as email address or mailing address, and the name of an appropriate Editor to review the paper (see the list of Editors below).

The first page of an article must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence and at most 150 words. Included with the footnotes to the paper should be the 2010 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from \url{www.ams.org/msc/}. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from \url{www.ams.org/msnhtml/serials.pdf}. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at \url{www.ams.org/mrlookup/}.

Electronically prepared manuscripts. Manuscripts should be electronically prepared in \texttt{AMS-\LaTeX}. To this end, the Society has prepared \texttt{AMS-\LaTeX} author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the \texttt{AMS-\LaTeX} style file and the \texttt{\label} and \texttt{\ref} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for Proceedings of the AMS from \url{www.ams.org/proc/procauthorpac.html}. The AMS Author Handbook is available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical
Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the Web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/authors/journals.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

AMS policy on making changes to articles after publication. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information such as affiliation, current address, and email address up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the Web through links from the manuscript tracking screen. Questions can be sent to proc-query@ams.org.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to proc-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
Editors

The AMS uses Centralized Manuscript Processing for initial submissions to AMS journals. Authors should follow instructions listed on the Initial Submission page found at www.ams.org/proc/procsubmit.html.
