### Table of Contents

**Hedrick, E. R., of Columbia, Mo.** (with Louis Ingold). A set of axioms for line geometry. 205

**Ingold, Louis, of Columbia, Mo.** (with E. R. Hedrick). A set of axioms for line geometry. 205

**Jackson, Dunham, of Cambridge, Mass.** On the degree of convergence of Sturm-Liouville series. 439

**Johnson, Roger A., of Cambridge, Mass.** The conic as a space element. 335

**Longley, W. R., of New Haven, Conn.** An existence theorem for a certain differential equation of the nth order. 328

**Love, Clyde E., of Ann Arbor, Mich.** Singular integral equations of the Volterra type. 467

**Mitchell, H. H., of Philadelphia, Pa.** The subgroups of the quaternion abelian linear group. 379

**Root, Ralph E., of Annapolis, Md.** Limits in terms of order, with example of limiting element not approachable by a sequence. 51

**Sharpe, F. R., of Ithaca, N. Y.** (with C. F. Craig). An application of Severi’s theory of a basis to the Kummer and Weddle surfaces. 236

**Snyder, Virgil, of Ithaca, N. Y.** (with F. R. Sharpe). Birational transformations of certain quartic surfaces. 266

**Sullivan, Charles T., of Montreal, Canada.** Properties of surfaces whose asymptotic curves belong to linear complexes. 167

**Underhill, A. L., of Minneapolis, Minn.** (with G. A. Bliss). The minimum of a definite integral for unilateral variations in space. 291

**Vandiver, H. S., of Bala, Pa.** Note on Fermat’s last theorem. 202

**Wedderburn, J. H. M., of Princeton, N. J.** A type of primitive algebra. 162

**Wiley, Forbes Bagley, of Chicago, Ill.** Proof of the finiteness of the modular covariants of a system of binary forms and cogredient points. 431

Notes and errata: volumes 11 and 14. 504

* The numbers in this column indicate for every paper the volume and part of volume of publication, and thus the date of publication, e.g., the first paper in the list was published in January, 1911, and the second in October, 1910.

In this column references are made also to the Notes and errata published in the concluding numbers of various volumes, e.g., a note to the paper by E. B. Lytle appears in the Notes and errata of volume 15.
Clements, G. R., Implicit functions defined by equations with vanishing jacobian .................................. 143 325-342
Coble, A. B., An application of Moore’s cross-ratio group to the solution of the sextic equation .............. 123 311-325
— An application of finite geometry to the characteristic theory of the odd and even theta functions. .......... 143 241-276
Cole, F. N., The triad systems of thirteen letters .......... 141 1- 5
Coolidge, J. L., The metrical aspect of the line-sphere transformation .................................................. 121 43- 69
— A study of the circle cross .................................. 142 149-174
— Congruences and complexes of circles ..................... 151 107-134
Conner, J. R., Multiple correspondences determined by the rational plane quintic curve ......................... 131 265-278
Craig, C. F., On a class of hyperfuchsian functions ....... 111 37- 54
— (with F. R. Sharpe), An application of Severi’s theory of a basis to the Kummer and Weddle surfaces ......... 153 236-244
Cummings, L. D., On a method of comparison for triple-systems ...................................................... 153 311-327
Dederick, L. S., On the character of a transformation in the neighborhood of a point where its jacobian vanishes .. 141 143-148
Denton, W. W., Projective differential geometry of developable surfaces ............................................. 142 175-208
Dickson, L. E., An invariantive investigation of irreducible binary modular forms ............................... 121 1- 18
— A fundamental system of invariants of the general modular linear group with a solution of the form problem ... 121 75- 98
— Linear algebras .............................................. 131 59- 73
— Proof of the finiteness of modular covariants .......... 141 299-310
— Linear associative algebras and abelian equations .... 151 31- 46
— Invariants in the theory of numbers ....................... 154 497-503
Eisenhart, L. P., Congruences of the elliptic type ........ 113 351-370
— Surfaces with isothermal representation of their lines of curvature and their transformations (second memoir) ... 114 475-486
— Certain continuous deformations of surfaces applicable to the quadrics ....................................... 144 365-402
— Transformations of surfaces of Voss ......................... 154 245-265
— Transformations of conjugate systems with equal point invariants ............................................... 154 397-430
Eiesland, J., On minimal lines and congruences in four-dimensional space ............................................. 124 403-428
Evans, G. C., Volterra’s integral equation of the second kind, with discontinuous kernel .......................... 114 393-413
— Volterra’s integral equation of the second kind, with discontinuous kernel (second paper) ..................... 124 429-472
— The Cauchy problem for integro-differential equations... 15, 215–226
— On the reduction of integro-differential equations... 15, 477–496
FIELDS, J. C., A method of proving certain theorems relating to rational functions which are adjoint to an algebraic equation for a given value of the independent variable... 13, 164–174
FITE, W. B., Some theorems concerning groups whose orders are powers of a prime... 15, 47–50
FRÉCHET, M., Sur les classes $V$ normales... 14, 320–324
— Sur la notion de différentielle d'une fonction de ligne... 15, 135–161
GLENN, O. E., On semi-discriminants of ternary forms... 12, 367–374
— The symbolical theory of finite expansions... 15, 72–86
GREEN, G. M., One-parameter families of curves in the plane... 15, 277–290
GRÖNWALL, T. H., On a theorem of Fejér's and an analogon to Gibb's phenomenon... 13, 445–468
— Some asymptotic expressions in the theory of numbers... 14, 113–122
— On the degree of convergence of Laplace's series... 15, 1–30
HEDRICK, E. R., On properties of a domain for which any set is closed... 12, 285–294
— (with L. Ingold), A set of axioms for line geometry... 15, 205–214
HODGSON, J. E., Orthocentric properties of the plane directed $n$-line... 13, 199–231
HOSKINS, L. M., The strain of a gravitating, compressible elastic sphere... 11, 203–248
— The strain of a non-gravitating sphere of variable density... 11, 494–504
HURWITZ, W. A., On the pseudo-resolvent to the kernel of an integral equation... 13, 405–418
INGOLD, L., Vector interpretation of symbolic differential parameters... 11, 449–474
— Functional differential geometry... 13, 319–341
— (with E. R. Hedrick), A set of axioms for line geometry... 15, 205–214
JACKSON, D., On the degree of convergence of the development of a continuous function according to Legendre's polynomials... 13, 305–318
— On approximation by trigonometric sums and polynomials... 13, 491–515
— On the approximate representation of an indefinite integral and the degree of convergence of related Fourier's series... 14, 343–364
— On the accuracy of trigonometric interpolation... 14, 453–461
— On the degree of convergence of Sturm-Liouville series... 15, 439–466
JOHNSON, R. A., The conic as a space element... 15, 335–368
KASNER, E., The theorem of Thomson and Tait and natural families of trajectories... 11, 121–140
— Natural systems of trajectories generating families of Lamé... 12, 70–74
KELLOGG, O. D., Harmonic functions and Green's integral... 13, 109–132
