Transactions of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics, and includes, in general, longer papers than those in the Proceedings.

Mathematical papers intended for publication in the Transactions should be addressed to one of the editors:

Papers in analysis and applied mathematics to FRANÇOIS TREVES, Department of Mathematics, Rutgers University, New Brunswick, New Jersey 08903.

Papers in algebra and number theory to DOCK S. RIM, Department of Mathematics, University of Pennsylvania, Philadelphia, Pennsylvania 19104.

Papers in statistics and probability to HARRY KESTEN, Department of Mathematics, Cornell University, Ithaca, New York 14850.

Papers in geometry and abstract analysis to SHLOMO STERNBERG, Department of Mathematics, Harvard University, Cambridge, Massachusetts 02138.

Papers in topology to STEVE ARMENTROUT, Department of Mathematics, Pennsylvania State University, University Park, Pennsylvania 16802.

All other communications to the editors should be addressed to the Managing Editor, STEVE ARMENTROUT.

All papers should be typewritten, double-spaced, and the author should keep a complete copy.

The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. Also avoid proper names unless mathematical usage associates them with the work. The abstract should be at least one complete sentence, and at most 300 words, with the upper limit primarily for longer papers. Included with the footnotes to your paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article, which may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate on the original manuscript which of them should receive galley proof in the event that the manuscript is accepted for publication.

Annual subscription is $180.00; 12 volumes are planned for 1973. All inquiries for Volumes 1–77 should be directed to Johnson Reprint Corporation, 111 Fifth Avenue, New York, New York 10003. Orders for Volumes 78 through the present volume should be directed to the American Mathematical Society.

Backlog. Two-thirds of the papers currently being received by the editors will be published in 11–14 months.

Memoirs of the American Mathematical Society

These are a series of paperbound research tracts which are of the same general character as the papers published in the Transactions. The editorial committee is identical with that for the Transactions so that papers intended for publication in this series should be addressed to one of the editors listed above.

Published monthly by the American Mathematical Society. Subscriptions for Journals published by the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02904.

Second-class postage paid at Providence, Rhode Island, and additional mailing offices.

(Continued from back cover)

Additive set functions on lattices of sets
By Gene A. DeBoth ................................................................. 341

A nonlinear optimal control minimization technique
By Russell D. Rupp ............................................................... 357

Decreasing rearrangements and doubly stochastic operators
By Peter W. Day ................................................................. 383

On the zeros of power series with Hadamard gaps—distribution in sectors
By I-Lok Chang ................................................................. 393

Some integral inequalities with applications to the imbedding of Sobolev spaces defined over irregular domains
By R. A. Adams ................................................................. 401

On fibering of cobordism classes
By R. E. Stong ................................................................. 431

Equivariant bordism of maps
By R. E. Stong ................................................................. 449

Exit properties of stochastic processes with stationary independent increments
By P. W. Millar ................................................................. 459

Monotonically normal spaces
By R. W. Heath, D. J. Lutzer and P. L. Zenor ...................... 481

Generalized Dedekind eta-functions and generalized Dedekind sums
By Bruce C. Berndt ............................................................. 495
