Transactions of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics, and includes, in general, longer papers than those in the PROCEEDINGS.

Mathematical papers intended for publication in the TRANSACTIONS should be addressed to one of the editors:

Papers in analysis and applied mathematics to FRANCOIS TREVES, Department of Mathematics, Rutgers University, New Brunswick, New Jersey 08903.

Papers in algebra and number theory to DOCK S. RIM, Department of Mathematics, University of Pennsylvania, Philadelphia, Pennsylvania 19104.

Papers in statistics and probability to HARRY KESTEN, Department of Mathematics, Cornell University, Ithaca, New York 14850.

Papers in geometry and abstract analysis to SHLOMO STERNBERG, Department of Mathematics, Harvard University, Cambridge, Massachusetts 02138.

Papers in topology to PHILIP T. CHURCH, Department of Mathematics, Syracuse University, Syracuse, New York 13210.

All other communications to the editors should be addressed to the Managing Editor, HARRY KESTEN.

All papers should be typewritten, double-spaced, and the author should keep a complete copy.

The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. Also avoid proper names unless mathematical usage associates them with the work. The abstract should be at least one complete sentence, and at most 300 words, with the upper limit primarily for longer papers. Included with the footnotes to your paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article, which may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate on the original manuscript which of them should receive galley proof in the event that the manuscript is accepted for publication.

Annual subscription is $210.00; 14 volumes are planned for 1974. All inquiries for Volumes 1–77 should be directed to Johnson Reprint Corporation, 111 Fifth Avenue, New York, New York 10003. Orders for Volumes 78 through the present volume should be directed to the American Mathematical Society.

Backlog. 1200 pages. Two-thirds of the papers currently being received by the editors will be published in 12–14 months.

Memoirs of the American Mathematical Society

These are a series of paperbound research tracts which are of the same general character as the papers published in the TRANSACTIONS. The editorial committee is identical with that for the TRANSACTIONS so that papers intended for publication in this series should be addressed to one of the editors listed above.

Published monthly by the American Mathematical Society. Subscriptions for Journals published by the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02940.

Second-class postage paid at Providence, Rhode Island, and additional mailing offices.

Printed in the United States of America
Almost everywhere convergence of Vilenkin-Fourier series
By John Gosselin
345

The strong law of large numbers when the mean is undefined
By K. Bruce Erickson
371

Neocontinuous Mikusiński operators
By Carl C. Hughes and Raimond A. Struble
383

Perturbations of nonlinear differential equations
By R. E. Fennell and T. G. Proctor
401

Convex hulls and extreme points of families of starlike and convex mappings
By L. Brickman, D. J. Hallenbeck, T. H. MacGregor and D. R. Wilken
413

Cauchy problem and analytic continuation for systems of first order elliptic equations with analytic coefficients
By Chung-Ling Yu
429

Square integrable representations of nilpotent groups
By Calvin C. Moore and Joseph A. Wolf
445

Appell polynomials and differential equations of infinite order
By J. D. Buckholtz
463

Mechanical systems with symmetry on homogeneous spaces
By Ernesto A. Lacomba
477

A geometrical characterization of Banach spaces having the Radon-Nikodym property
By Hugh B. Maynard
493

Weakly almost periodic functionals on the Fourier algebra
By Charles F. Dunkl and Donald E. Ramirez
501
CONTENTS

Vol. 185 November 1973 Whole No. 458

Harmonic analysis for functors on categories of Banach spaces of distributions
By Thomas Donaldson.......................................................... 1

Homology of the classical groups over the Dyer-Lashof algebra
By Stanley O. Kochman....................................................... 83

The calculation of penetration indices for exceptional wild arcs
By James M. McPherson..................................................... 137

On coefficient means of certain subclasses of univalent functions
By F. Holland and J. B. Twomey........................................... 151

Multipliers for certain convolution measure algebras
By Charles Dwight Lahr..................................................... 165

Stability properties of a class of attractors
By Jorge Lewowicz........................................................... 183

Representations of Jordan triples
By Ottmar Loos...................................................................... 199

On recurrent random walks on semigroups
By T. C. Sun, A. Mukherjea and N. A. Tserpes.......................... 213

On strictly cyclic algebras, \(\mathbb{P}\)-algebras and reflexive operators
By Domingo A. Herrero and Alan Lambert.............................. 229

Statistical mechanics on a compact set with \(\mathbb{Z}^d\) action satisfying expansiveness and specification
By David Ruelle........................................................................ 237

The law of the iterated logarithm for Brownian motion in a Banach space
By J. Kuelbs and R. LePage.................................................. 253

Extreme points for some classes of univalent functions
By W. Hengartner and G. Schober........................................ 265

Triangular representations of splitting rings
By K. R. Goodearl.................................................................. 271

Multiplicative structure of generalized Koszul complexes
By Eugene H. Gover............................................................. 287

Isomorphisms of the lattice of inner ideals of certain quadratic Jordan algebras
By Jerome M. Katz.................................................................. 309

Hermitian operators and one-parameter groups of isometries in Hardy spaces
By Earl Berkson and Horacio Porta...................................... 331

(Continued on inside back cover)
