ACKNOWLEDGEMENT OF PRIORITY

BY

AVNER FRIEDMAN AND MARK A. PINSKY

In our first paper on stochastic stability [1] we proved several results which we could not find in the literature. Professor Hasminskii has kindly pointed out that several of our initial results can be obtained directly from theorems found in his book [2]. In particular, the results of §§1 and 2 of [1] follow directly from results in Chapters 5 and 6 of [2]. Furthermore, the methods of §6.8 of [2] give an alternate proof of Theorem 3.1 of the paper. The remainder of [1] contains results on spiraling which generalize the behaviour found in Example 2 of §6.9 of [2].
