Transactions of the American Mathematical Society

THIS JOURNAL is devoted entirely to research in pure and applied mathematics, and includes, in general, longer papers than those in the PROCEEDINGS.

PREPARATION OF THE MANUSCRIPT. All papers should be typewritten, double-spaced, and the author should keep a complete copy.

FORM OF MANUSCRIPT. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as “Some remarks about” or “concerning” should be avoided. Also avoid proper names unless mathematical usage associates them with the work. The abstract should be at least one complete sentence, and at most 300 words, with the upper limit primarily for longer papers. Included with the footnotes to your paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article, which may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

SUBMISSION OF MANUSCRIPT. See the inside back cover of this journal.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate on the original manuscript which of them should receive galley proof in the event that the manuscript is accepted for publication.

BACKLOG. 300 pages. Two-thirds of the papers currently being accepted by the editors will be published in 12–14 months.

SUBSCRIPTION INFORMATION. Subscription prices for Volumes 201–214 (1975) are list $210.00, member $105.00. Subscription prices for Volumes 215–224 (1976) are list $210.00, member $105.00.

Back number prices per volume for Volumes 78–134 (1955–1968) are list $18.00, member $13.50; Volumes 135–200 (1969–1974), list $30.00, member $22.50. Volumes 201–214 (1975), when sold at back number prices, will be list $30.00 per volume, member $22.50 per volume. Volumes 1–77 (1900–1954) may be ordered through Johnson Reprint Corporation, 111 Fifth Avenue, New York, New York 10003. Volumes 1–200 (1900–1974) are available on 35 mm microfilm from University Microfilms-Xerox, 300 North Zeeb Road, Ann Arbor, Michigan 48106.

Memoirs of the American Mathematical Society

This bimonthly journal is devoted to research in pure and applied mathematics of much the same nature as appears in TRANSACTIONS. An issue consists of one or more separately bound research tracts for which the author(s) has provided reproduction copy. Prior to 1975 this was published as a monograph series. The editorial committee is identical with that for the TRANSACTIONS so that papers intended for publication in this series should be addressed to one of the editors listed on the inside back cover.

Published monthly except two in April and October by the American Mathematical Society. Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P.O. Box 1571, Annex Station, Providence, Rhode Island 02901. All orders must be accompanied by payment. Other correspondence should be addressed to P.O. Box 6248, Providence, Rhode Island 02940.

Second-class postage paid at Providence, Rhode Island, and additional mailing offices. Copyright © 1975 American Mathematical Society All rights reserved

Newman's theorem in the Riemannian category  
By L. N. Mann and J. L. Sicks .......................................................... 259

Sobolev-Galpern equations of order $n + 2$ in $R^m \times R$, $m \geq 2$  
By V. R. Gopala Rao ........................................................................... 267

Localization and sheaf reflectors  
By J. Lambek and B. A. Rattray ......................................................... 279

On bilateral derivates and the derivative  
By K. M. Garg ..................................................................................... 295

On the generation of one-relator groups  
By Stephen J. Pride ........................................................................... 331

Topological extension properties  
By R. Grant Woods ........................................................................... 365

Nonlinear techniques for linear oscillation problems  
By Zeev Nehari .................................................................................. 387

Submission of Manuscript

Mathematical papers intended for publication in the TRANSACTIONS or the MEMOIRS should be addressed to one of the editors. Subjects, and the editors associated with them, follow:

Real analysis (excluding harmonic analysis) and applied mathematics to FRANÇOIS TREVES, Department of Mathematics, Rutgers University, New Brunswick, N J 08903

Harmonic and complex analysis to HUGO ROSSI, Department of Mathematics, University of Utah, Salt Lake City, UT 84112

Abstract analysis to ALEXANDRA IONESCU TULCEA, Department of Mathematics, Northwestern University, Evanston, IL 60201

Algebra and number theory (excluding universal algebras) to STEPHEN S. SHATZ, Department of Mathematics, University of Pennsylvania, Philadelphia, PA 19174

Logic, foundations, universal algebras and combinatorics to ALISTAIR H. LACHLAN, Department of Mathematics, Simon Fraser University, Burnaby 2, B.C., CANADA

Topology to PHILIP T. CHURCH, Department of Mathematics, Syracuse University, Syracuse, NY 13210

Global analysis and differential geometry to VICTOR W. GUillemin, c/o Ms. M. McQuillen, Department of Mathematics, Harvard University, Cambridge, MA 02138

Probability and statistics to DANIEL W. STROOCK, Department of Mathematics, University of Colorado, Boulder, CO 80302

All other communications to the editors should be addressed to the Managing Editor, ALISTAIR H. LACHLAN.
Gelfond's method for algebraic independence
By W. Dale Brownawell .................................................. 1

The subgroups of a tree product of groups
By J. Fischer ................................................................. 27

Hypercontractive semigroups and Sobolev's inequality
By George F. Feissner ..................................................... 51

Duality for Hadamard products with applications to extremal problems for
categories regular in the unit disk
By Stephan Ruscheweyh .................................................. 63

On minimal immersions of $S^2$ into $S^{2m}$
By João Lucas Marques Barbosa ...................................... 75

Topological dynamics and $C^*$-algebras
By William L. Green ..................................................... 107

On automorphism groups and endomorphism rings of abelian $p$-groups
By Jutta Hausen ............................................................ 123

The similarity orbit of a normal operator
By L. A. Fialkow ........................................................... 129

The zeroes of nonnegative holomorphic curvature operators
By A. M. Naveira and C. Fuertes ..................................... 139

A classification theorem for Abelian $p$-groups
By R. B. Warfield, Jr. .................................................... 149

Concerning first countable spaces. III
By G. M. Reed ............................................................. 169

A property of finite $p$-groups with trivial multiplicator
By Michael R. Jones ..................................................... 179

On the variety of manifolds without conjugate points
By Robert Gulliver ....................................................... 185

On the construction of the Bockstein spectral sequence
By Jerrold Siegel .......................................................... 203

Two weight function norm inequalities for the Poisson integral
By Benjamin Muckenhoupt .............................................. 225

Polynomials related to the Bessel functions
By F. T. Howard .......................................................... 233

The center of an order with finite global dimension
By Mark Ramras ........................................................... 249

(Continued on inside back cover)
