TRANSACTIONS OF THE AMERICAN MATHEMATICAL SOCIETY

THIS JOURNAL is devoted entirely to research in pure and applied mathematics, and includes, in general, longer papers than those in the PROCEEDINGS.

PREPARATION OF THE MANUSCRIPT. All papers should be typewritten double-spaced, and two copies should be sent to the appropriate editor. The author should keep a complete copy.

FORM OF MANUSCRIPT. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "Some remarks about" or "concerning" should be avoided. Also avoid proper names unless mathematical usage associates them with the work. The abstract should be at least one complete sentence, and at most 300 words, with the upper limit primarily for longer papers. Included with the footnotes to your paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article, which may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

SUBMISSION OF MANUSCRIPT. See the inside back cover of this journal.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galleys will be sent. Joint authors should, therefore, indicate on the original manuscript which of them should receive galley proof in the event that the manuscript is accepted for publication.

PUBLICATION CHARGES. The research journals of the American Mathematical Society carry a page charge of $40.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of his paper for publication dependent upon payment of the page charge.

BACKLOG. 1000 pages. Two-thirds of the papers currently being accepted by the editors will be published in 15—17 months.

SUBSCRIPTION INFORMATION. TRANSACTIONS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscription prices for Volumes 235—246 (1978) are $288.00 list; $144.00 member.

BACK NUMBER INFORMATION. Back number prices per volume are: for Volumes 78—134, $18.00 list, $13.50 member; for Volumes 135—214, $30.00 list, $22.50 member; for Volumes 215—224, $32.00 list, $24.00 member; for Volumes 225—234, $36.00 list, $27.00 member. Volumes 1—77 may be ordered from Johnson Reprint Corporation, 111 Fifth Avenue, New York, New York 10003. Volumes 1—224 are available on 35mm microfilm from University Microfilms International, 300 North Zeeb Road, Ann Arbor, Michigan 48106.

MEMOIRS OF THE AMERICAN MATHEMATICAL SOCIETY

This bimonthly journal is devoted to research in pure and applied mathematics of much the same nature as appears in TRANSACTIONS. An issue consists of one or more separately bound research tracts for which the author(s) has provided reproduction copy. Prior to 1975 this was published as a monograph series. The editorial committee is identical with that for the TRANSACTIONS so that papers intended for publication in this series should be addressed to one of the editors listed on the inside back cover.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.

Desarguesian Klingenberg planes
By P. Y. Bacon

Isosingular loci and the Cartesian product structure of complex analytic singularities
By Robert Ephraim

Uniqueness in the Cauchy problem for parabolic equations
By Roger M. Hayne

A characterization of upper-embeddable graphs
By Mark Jungerman

SUBMISSION OF MANUSCRIPT
Two copies of mathematical papers intended for publication in the TRANSACTIONS or the MEMOIRS should be addressed to one of the editors. Subjects, and the editors associated with them, follow:

Real analysis (excluding harmonic analysis) and applied mathematics to ROBERT T. SEELEY, Department of Mathematics, University of Massachusetts–Boston, Harbor Campus, Boston, MA 02125.

Harmonic and complex analysis to HUGO ROSSI, Department of Mathematics, University of Utah, Salt Lake City, UT 84112.

Abstract analysis to W. A. J. LUXEMBURG, Department of Mathematics 253–37, California Institute of Technology, Pasadena, CA 91125.

Algebra and number theory (excluding universal algebras) to STEPHEN S. SHATZ, Department of Mathematics, University of Pennsylvania, Philadelphia, PA 19174.

Logic, foundations, universal algebras and combinatorics to SOLOMON FEFERMAN, Department of Mathematics, Stanford University, Stanford, CA 94305.

Topology to JAMES D. STASHEFF, Department of Mathematics, University of North Carolina, Chapel Hill, NC 27514.

Global analysis and differential geometry to ALAN D. WEINSTEIN, Department of Mathematics, University of California, Berkeley, Berkeley, CA 94720.

Probability and statistics to DANIEL W. STROOCK, Department of Mathematics, University of Colorado, Boulder, CO 80302.

All other communications to the editors should be addressed to the Managing Editor, HUGO ROSSI.
CONTENTS

Vol. 241 July 1978 Whole No. 518

The order and symbol of a distribution
By Alan Weinstein ........................................... 1

Groups of PL A-homology spheres
By Gerald A. Anderson ..................................... 55

Solution of the nonlinear problem \( Au = N(u) \) in a Banach space
By Martin Schechter, Jack Shapiro and Morris Snow ...... 69

Ultrafilter invariants in topological spaces
By Victor Saks ............................................. 79

The BP homology of H-spaces
By Richard Kane .......................................... 99

Undecidable existential problems for addition and divisibility in algebraic number rings
By L. Lipshitz .............................................. 121

Distances between two-state Markov processes attainable by Markov joinings
By Martin H. Ellis ........................................ 129

Singularly perturbed boundary value problems with angular limiting solutions
By F. A. Howes ............................................ 155

Characterizations of amenable groups
By William R. Emerson .................................. 181

Topologies on spaces of vector-valued continuous functions
By Surjit Singh Khurana ................................ 195

3-pseudomanifolds with preassigned links
By Amos Altshuler ....................................... 213

On the growth of the integral means of subharmonic functions of order less than one
By Faruk F. Abi-Khuzam ................................ 239

Standard and normal reductions
By R. Hindley ............................................ 253

Weak uniqueness sets for discrete groups
By Marek Bozejko and Tadeusz Pytlik ..................... 273

Partition theorems and ultrafilters
By James E. Baumgartner and Alan D. Taylor .......... 283

Structural stability for flows on the torus with a cross-cap
By Carlos Gutierrez ..................................... 311

Regular Hjelmslev planes. II
By Dieter Jungnickel .................................... 321

The semigroup of varieties of Brouwerian semilattices
By Peter Köhler ......................................... 331

(Continued on inside back cover)
