TRANSACTIONS OF THE AMERICAN MATHEMATICAL SOCIETY

This journal is devoted entirely to research in pure and applied mathematics, and includes, in general, longer papers than those in the PROCEEDINGS.

Preparation of the Manuscript. All papers should be typewritten double-spaced, and two copies should be sent to the appropriate editor. The author should keep a complete copy.

Form of Manuscript. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "Some remarks about" or "concerning" should be avoided. Also avoid proper names unless mathematical usage associates them with the work. The abstract should be at least one complete sentence, and at most 300 words, with the upper limit primarily for longer papers. Included with the footnotes to your paper, but placed before the first footnote, there should be first the 1980 Mathematics Subject Classification representing the primary and secondary subjects of the article, which may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The 1980 Mathematics Subject Classification with instructions for its use can be found in the 1978 Subject Index to Mathematical Reviews.

Submission of Manuscript. See the inside back cover of this journal.

Galleys Proof. When a paper with more than one author has been accepted for publication, only one set of galleys proof will be sent. Joint authors should, therefore, indicate on the original manuscript which of them should receive galleys proof in the event that the manuscript is accepted for publication.

Publication Charges. The research journals of the American Mathematical Society carry a page charge of $40.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of his paper for publication dependent upon payment of the page charge.

Backlog. None. Two-thirds of the papers currently being accepted by the editors will be published in 12–15 months.

Subscription Information. Transactions of the American Mathematical Society is published monthly. Subscription prices for Volumes 257–262 (1980) are $288.00 list; $144.00 member.

Back Number Information. Back number prices per volume are: for Volumes 78–134, $18.00 list, $13.50 member; for Volumes 135–214, $30.00 list, $22.50 member; for Volumes 215–224, $32.00 list, $24.00 member; for Volumes 225–246, $36.00 list, $27.00 member; for Volumes 247–256, $44.00 list, $33.00 member. Volumes 1–77 may be ordered from Johnson Reprint Corporation, 111 Fifth Avenue, New York, New York 10003. Volumes 1–224 are available on 35mm microfilm from University Microfilms International, 300 North Zeeb Road, Ann Arbor, Michigan 48106.

Memoirs of the American Mathematical Society

This bimonthly journal is devoted to research in pure and applied mathematics of much the same nature as appears in Transactions. An issue consists of one or more separately bound research tracts for which the author(s) has provided reproduction copy. Prior to 1975 this was published as a monograph series. The editorial committee is identical with that for the Transactions so that papers intended for publication in this series should be addressed to one of the editors listed on the inside back cover.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.
SUBMISSION OF MANUSCRIPT

Two copies of mathematical papers intended for publication in the TRANSACTIONS or the MEMOIRS should be addressed to one of the editors. Subjects, and the editors associated with them, follow:

Real analysis (excluding harmonic analysis) and applied mathematics to Paul H. Rabinowitz, Department of Mathematics, University of Wisconsin, Madison, WI 53706.

Harmonic and complex analysis to R. O. Wells, Jr., School of Mathematics, Institute for Advanced Study, Princeton, NJ 08540.

Abstract analysis to W. A. J. Luxemburg, Department of Mathematics 253–37, California Institute of Technology, Pasadena, CA 91125.

Algebra and number theory (excluding universal algebras) to Michael Artin, Department of Mathematics, Room 2-239, Massachusetts Institute of Technology, Cambridge, MA 02139.

Logic, foundations, universal algebras and combinatorics to Jan Mycielski, Department of Mathematics, University of Colorado, Boulder, CO 80309.

Topology to James D. Stasheff, Department of Mathematics, University of North Carolina, Chapel Hill, NC 27514.

Global analysis and differential geometry to Alan D. Weinstein, Department of Mathematics, California Institute of Technology, Pasadena, CA 91125.

Probability and statistics to Steven Orey, School of Mathematics, University of Minnesota, Minneapolis, MN 55455.

All other communications to the editors should be addressed to the Managing Editor, James D. Stasheff.

COPYING AND REPRINTING

Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Executive Director, American Mathematical Society, Box 6248, Providence, Rhode Island 02940.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc., Operations Center, P. O. Box 765, Schenectady, New York 12301. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.
CONTENTS
Vol. 258, No. 1 March 1980 Whole No. 538

Asymptotic completeness for classes of two, three, and four particle Schrödinger operators
   By George A. Hagedorn .......................................................... 1

On the excursion process of Brownian motion
   By Frank B. Knight .............................................................. 77

Approximate torus fibrations of high dimensional manifolds can be approximated
   by torus bundle projections
   By R. E. Goad ................................................................. 87

The interior operator logic and product topologies
   By Joseph Sgro ................................................................. 99

Topological equivalence of gradient vector fields
   By Douglas S. Shafer ....................................................... 113

Fibrewise localization and completion
   By J. P. May ................................................................. 127

Fundamental solutions for a class of hypoelliptic PDE generated by composition of
   quadratic forms
   By Aroldo Kaplan ............................................................ 147

Fractional differentiation and Lipschitz spaces on local fields
   By C. W. Onneweer ......................................................... 155

The number of groups of a given genus
   By T. W. Tucker ............................................................. 167

On special classes of entire functions whose zeros and growth are restricted
   By Carl L. Prather .......................................................... 181

Convolution equations in spaces of infinite dimensional entire functions of exponential
   and related types
   By J. F. Colombeau and B. Perrot ...................................... 191

Basic sequences in non-Schwartz-Fréchet spaces
   By Steven F. Bellenot .................................................... 199

Minimal excessive measures and functions
   By E. B. Dynkin ............................................................ 217

Derivation alternator rings with idempotent
   By Irvin R. Hentzel and Harry F. Smith ................................ 245

Two approaches to supermanifolds
   By Marjorie Batchelor .................................................... 257
