Transactions of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics.

Subscription information. Transactions of the American Mathematical Society is published monthly. Subscription prices for Volumes 329–334 (1992) are $842 list; $674 institutional member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $27; subscribers in India must pay a postage surcharge of $50. Expedited delivery to destinations in North America $38; elsewhere $127.

Back number information. For back issues see the AMS Catalogue of Publications.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 1571, Annex Station, Providence, RI 02901-1571. All orders must be accompanied by payment. Other correspondence should be addressed to P.O. Box 6248, Providence, RI 02940-6248.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Manager of Editorial Services, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that the fee of $1.00 plus $.25 per page for each copy be paid directly to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.

Transactions of the American Mathematical Society is published monthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213. Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Transactions, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248.

The strong maximal function on a nilpotent group
   By Michael Christ .................................................. 1
The transverse homoclinic dynamics and their bifurcations at nonhyperbolic fixed points
   By Bo Deng .......................................................... 15
Tensor products and Grothendieck type inequalities of operators in $L_p$-spaces
   By Bernd Carl and Andreas Defant ................................. 55
Stable splittings of the dual spectrum of the classifying space of a compact Lie group
   By Chun-Nip Lee ..................................................... 77
Nests of subspaces in Banach space and their order types
   By Alvaro Arias and Jeff Farmer ................................. 113
The helical transform as a connection between ergodic theory and harmonic analysis
   By Idris Assani and Karl Petersen ............................... 131
A simple proof of the fundamental theorem of Kirby calculus on links
   By Ning Lu .......................................................... 143
A Chern character in cyclic homology
   By Luca Quardo Zamboni ........................................... 157
The structure of rings in some varieties with definable principal congruences
   By G. E. Simons ..................................................... 165
On the resolution of a curve lying on a smooth cubic surface in $\mathbb{P}^3$
   By Salvatore Giuffrida and Renato Maggioni ....................... 181
On the genus of smooth 4-manifolds
   By Alberto Cavicchioli ............................................. 203
A quasiregular analogue of a theorem of Hardy and Littlewood
   By Craig A. Nolder .................................................. 215
An open collar theorem for 4-manifolds
   By Craig R. Guilbault ............................................. 227
L'espace des pseudo-arcs d'une surface
   By Robert Cauty .................................................... 247
Frames associated with an abelian $\ell$-group
   By James J. Madden ............................................... 265
Two-dimensional Cremona groups acting on simplicial complexes
   By David Wright .................................................... 281
A Haar-type theory of best $L_1$-approximation with constraints
By András Kroó and Darrell Schmidt ......................... 301
Gauge invariant quantization on Riemannian manifolds
By Liu Zhang-Ju and Qian Min ............................. 321
On the $p$-adic completions of nonnilpotent spaces
By A. K. Bousfield ........................................ 335
Normal form and linearization for quasiperiodic systems
By Shui-Nee Chow, Kening Lu and Yun-Qiu Shen .......... 361
Multipliers of families of Cauchy-Stieltjes transforms
By R. A. Hibschweiler and T. H. MacGregor ............... 377
An asymptotic estimate for heights of algebraic subspaces
By Jeffrey Lin Thunder .................................... 395
A simplified trace formula for Hecke operators for $\Gamma_0(N)$
By Shepley L. Ross II ..................................... 425
Noetherian ring extensions with trace conditions
By Robert B. Warfield, Jr. .................................. 449

Vol. 331, No. 2 June 1992 Whole No. 685

Commutator theory for relatively modular quasivarieties
By Keith Kearnes and Ralph McKenzie ........................ 465
On the positive solutions of semilinear equations $\Delta u + \lambda u - hu^p = 0$ on the compact manifolds
By Tiancheng Ouyang ........................................ 503
The Bergman projection on Hartogs domains in $C^2$
By Harold P. Boas and Emil J. Straube ...................... 529
Invariant affine connections on Lie groups
By H. Turner Laquer ........................................ 541
Finite determination on algebraic sets
By L. Kushner ............................................... 553
Galois groups and the multiplicative structure of field extensions
By Robert Guralnick and Roger Wiegand ..................... 563
Approximation of Jensen measures by image measures under holomorphic functions and applications
By Shangquan Bu and Walter Schachermayer ................. 585
Isoparametric submanifolds of hyperbolic spaces
By Bingle Wu .............................................. 609
On the analyticity of solutions of first-order nonlinear PDE
By Nicholas Hanges and François Treves .......................... 627

On local structures of the singularities $A_k, D_k$ and $E_k$ of smooth maps
By Yoshifumi Ando .................................................... 639

On twistor spaces of anti-self-dual hermitian surfaces
By Massimiliano Pontecorvo ......................................... 653

Products of commutative rings and zero-dimensionality
By Robert Gilmer and William Heinzer ............................ 663

A bounded mountain pass lemma without the (PS) condition and applications
By Martin Schechter ...................................................... 681

A restriction theorem for modules having a spherical submodule
By Nicolas Andruskiewitsch and Juan A. Tirao .................. 705

The Gauss map of a genus three theta divisor
By Clint McCrorry, Theodore Shifrin and Robert Varley .... 727

Growth series of some wreath products
By Walter Parry .......................................................... 751

3-manifold groups with the finitely generated intersection property
By Teruhiko Soma ......................................................... 761

Exactly $k$-to-1 maps between graphs
By Jo Heath and A. J. W. Hilton .................................... 771

Parametrization of a singular Lagrangian variety
By Goo Ishikawa .......................................................... 787

Schubert calculus in complex cobordism
By Paul Bressler and Sam Evens ..................................... 799

Weakly compact homomorphisms
By J. E. Galé, T. J. Ransford and M. C. White .................. 815

Compact actions commuting with ergodic actions and applications to crossed products
By C. Peligrad ............................................................ 825

Subsequence ergodic theorems for $L^p$ contractions
By Roger L. Jones, James Olsen and Mate Wierdl ............... 837

Maximal triads and prime decompositions of surfaces embedded in 3-manifolds
By Michael Motto ....................................................... 851

The union of compact subgroups of an analytic group
By Ta-Sun Wu ............................................................ 869

Rotation sets for homeomorphisms and homology
By Mark Pollicott ....................................................... 881

Growth rates, $Z_p$-homology, and volumes of hyperbolic 3-manifolds
By Peter B. Shalen and Philip Wagreich ............................ 895
Editorial Information

To be published in the Transactions, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Transactions Editors shall solicit and encourage publication of worthy papers of length exceeding 10 published pages. Published pages are the same size as those generated in the style files provided for \TeX or \LaTeX.

As of April 1, 1992, the backlog for this journal was approximately 24 issues. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months.

A Copyright Transfer Agreement is required before a paper will be published in this journal. By submitting a paper to this journal, authors certify that the manuscript has not been submitted to nor is it under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

The first page must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence, and at most 300 words. Included with the footnotes to the paper, there should be the 1991 Mathematics Subject Classification representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual index of Mathematical Reviews, published with the December issue starting in 1990, as well as from the electronic service e-MATH [telnet e-MATH.ams.com (or telnet 130.44.1.100)]. Login and password are e-math]. For journal abbreviations used in bibliographies, see the list of serials in the latest Mathematical Reviews annual index. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

Electronically-prepared manuscripts. The AMS encourages submission of electronically-prepared manuscripts in or \LaTeX because properly prepared electronic manuscripts save the author proofreading time and move more quickly through the production process. To this end, the Society has prepared “preprint” style files, specifically the amspt style of or \LaTeX, which will simplify the work of authors and of the production staff. Those authors who make use of these style files from the beginning of the writing process will further reduce their own effort.

Guidelines for Preparing Electronic Manuscripts provide additional assistance and are available for use with either or \LaTeX. Authors with FTP access may obtain these Guidelines from the Society’s Internet node e-MATH.ams.com (130.44.1.100). For those without FTP access they can be
obtained free of charge from the e-mail address guide-elec@math.ams.com (Internet) or from the Publications Department, P. O. Box 6248, Providence, RI 02940-6248. When requesting Guidelines please specify which version you want.

Electronic manuscripts should be sent to the Providence office only after the paper has been accepted for publication. Please send electronically prepared manuscript files via e-mail to pub-submit@math.ams.com (Internet) or on diskettes to the Publications Department address listed above. When submitting electronic manuscripts please be sure to include a message indicating in which publication the paper has been accepted.

Two copies of the paper should be sent directly to the appropriate Editor and the author should keep one copy. At that time authors should indicate if the paper has been prepared using \texttt{AM\LaTeX} or \texttt{AM\LaTeX}. The \textit{Manual for Authors of Mathematical Papers} should be consulted for symbols and style conventions. The \textit{Manual} may be obtained free of charge from the e-mail address cust-serv@math.ams.com or from AMS, Customer Services Department, P. O. Box 6248, Providence, RI 02940-6248.

Any inquiries concerning a paper that has been accepted for publication should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.
Editors

Two copies of papers intended for publication in *Transactions or Memoirs* should be addressed to the appropriate editor. Subjects, and the editors associated with them, follow.

**Harmonic analysis, representation theory, and Lie theory** to AVNER D. ASH, Department of Mathematics, The Ohio State University, 231 West 18th Avenue, Columbus, OH 43210

**Abstract analysis** to MASAMICHI TAKESAKI, Department of Mathematics, University of California, Los Angeles, CA 90024

**Real and harmonic analysis** to DAVID JERISON, Department of Mathematics, Room 2-180, Massachusetts Institute of Technology, Cambridge, MA 02139

**Algebra and algebraic geometry** to JUDITH D. SALLY, Department of Mathematics, Northwestern University, Evanston, IL 60208

**Geometric topology, hyperbolic geometry, infinite group theory, and general topology** to PETER SHALEN, Department of Mathematics, Statistics and Computer Science, University of Illinois, Chicago, IL 60680

**Algebraic topology and differential topology** to RALPH COHEN, Department of Mathematics, Stanford University, Stanford, CA 94305

**Ordinary differential equations, partial differential equations, and applied mathematics** to JOHN MALLET-PARET, Division of Applied Mathematics, Brown University, Providence, RI 02912-9000

**Global analysis and differential geometry** to ROBERT L. BRYANT, Department of Mathematics, Duke University, Durham, NC 27706-7706

**Probability and statistics** to RICHARD DURRETT, Department of Mathematics, Cornell University, Ithaca, NY 14853-7901

**Combinatorics and Lie theory** to PHILIP J. HANLON, Department of Mathematics, University of Michigan, Ann Arbor, MI 48109-1003

**Logic, set theory, general topology, and universal algebra** to JAMES E. BAUMGARTNER, Department of Mathematics, Dartmouth College, Hanover, NH 03755

**Algebraic number theory, analytic number theory, and automorphic forms** to WENCHING WINNIE LI, Department of Mathematics, Pennsylvania State University, University Park, PA 16802-6401

**Complex analysis and nonlinear partial differential equations** to SUN-YUNG A. CHANG, Department of Mathematics, University of California, Los Angeles, CA 90024

All other communications to the editors should be addressed to the Managing Editor, JAMES E. BAUMGARTNER, Department of Mathematics, Dartmouth College, Hanover, NH 03755.

---

**MEMOIRS OF THE AMERICAN MATHEMATICAL SOCIETY**

This bimonthly journal is devoted to research in pure and applied mathematics of much the same nature as appears in *Transactions*. An issue consists of one or more separately bound research tracts for which the author(s) has provided reproduction copy. Prior to 1975 this was published as a monograph series. The editorial committee is identical with that for the *Transactions* so that papers intended for publication in this series should be addressed to one of the editors.
3-manifold groups with the finitely generated intersection property
   By Teruhiko Soma ........................................... 761
Exactly k-to-1 maps between graphs
   By Jo Heath and A. J. W. Hilton .......................... 771
Parametrization of a singular Lagrangian variety
   By Goo Ishikawa ........................................... 787
Schubert calculus in complex cobordism
   By Paul Bressler and Sam Evens .......................... 799
Weakly compact homomorphisms
   By J. E. Galé, T. J. Ransford and M. C. White ........ 815
Compact actions commuting with ergodic actions and applications to crossed products
   By C. Peligrad ............................................ 825
Subsequence ergodic theorems for $L^p$ contractions
   By Roger L. Jones, James Olsen and Mate Wierdl ....... 837
Maximal triads and prime decompositions of surfaces embedded in 3-manifolds
   By Michael Motto ........................................ 851
The union of compact subgroups of an analytic group
   By Ta-Sun Wu ............................................ 869
Rotation sets for homeomorphisms and homology
   By Mark Pollicott ........................................ 881
Growth rates, $\mathbb{Z}_p$-homology, and volumes of hyperbolic 3-manifolds
   By Peter B. Shalen and Philip Wagreich ................. 895
Commutator theory for relatively modular quasivarieties  
   By Keith Kearnes and Ralph McKenzie .................................. 465

On the positive solutions of semilinear equations $\Delta u + \lambda u - h u^p = 0$ on the compact manifolds  
   By Tiancheng Ouyang ..................................................... 503

The Bergman projection on Hartogs domains in $\mathbb{C}^2$  
   By Harold P. Boas and Emil J. Straube .................................. 529

Invariant affine connections on Lie groups  
   By H. Turner Laquer ...................................................... 541

Finite determination on algebraic sets  
   By L. Kushner ............................................................... 553

Galois groups and the multiplicative structure of field extensions  
   By Robert Guralnick and Roger Wiegand ................................ 563

Approximation of Jensen measures by image measures under holomorphic functions and applications  
   By Shangquan Bu and Walter Schachermayer ............................. 585

Isoparametric submanifolds of hyperbolic spaces  
   By Bingle Wu ............................................................... 609

On the analyticity of solutions of first-order nonlinear PDE  
   By Nicholas Hanges and François Trèves ............................... 627

On local structures of the singularities $A_k, D_k$ and $E_k$ of smooth maps  
   By Yoshifumi Ando .......................................................... 639

On twistor spaces of anti-self-dual hermitian surfaces  
   By Massimiliano Pontecorvo .............................................. 653

Products of commutative rings and zero-dimensionality  
   By Robert Gilmer and William Heinzer .................................. 663

A bounded mountain pass lemma without the (PS) condition and applications  
   By Martin Schechter ...................................................... 681

A restriction theorem for modules having a spherical submodule  
   By Nicolas Andruskiewitsch and Juan A. Tirao ......................... 705

The Gauss map of a genus three theta divisor  
   By Clint McCrory, Theodore Shifrin and Robert Varley ............. 727
