Editorial Information

To be published in the Transactions, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication.

Papers submitted to the Transactions should exceed 10 published journal pages in length. Shorter papers may be submitted to the Proceedings of the American Mathematical Society. Published pages are the same size as those generated in the style files provided for \( \text{AMS-L}\text{\LaTeX} \) or \( \text{AMS-}\text{\TeX} \).

As of June 30, 2002, the backlog for this journal was approximately 1 issue. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months, reduced by the number of issues published in four months (the time necessary for editing and composing a typical issue). In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. Two copies of the paper should be sent directly to the appropriate Editor and the author should keep a copy. If an editor is agreeable, an electronic manuscript prepared in \( \text{\LaTeX} \) or \( \text{\LaTeX} \) may be submitted by pointing to an appropriate URL on a preprint or e-print server.

The first page must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 300 words. Included with the footnotes to the paper should be the 2000 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The list of classifications is also available in print starting with the 1999 annual index of Mathematical Reviews. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from www.ams.org/publications/. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

Electronically prepared manuscripts. The AMS encourages electronically prepared manuscripts, with a strong preference for \( \text{AMS-L}\text{\LaTeX} \). To this end, the
Society has prepared \texttt{AMS-LATEX} author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, the \textit{AMS Author Handbook}, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the \texttt{AMS-LATEX} style file and the \texttt{\label} and \texttt{\ref} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of \texttt{TEX}, using \texttt{AMS-LATEX} also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. \texttt{AMS-LATEX} papers also move more efficiently through the production stream, helping to minimize publishing costs.

\texttt{AMS-LATEX} is the highly preferred format of \texttt{TEX}, but author packages are also available in \texttt{AMS-TEX}. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in \texttt{LATEX} or plain \texttt{TEX} are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production system. \texttt{LATEX} users will find that \texttt{AMS-LATEX} is the same as \texttt{LATEX} with additional commands to simplify the typesetting of mathematics, and users of plain \texttt{TEX} should have the foundation for learning \texttt{AMS-LATEX}.

Authors may retrieve an author package from the AMS website starting from \url{www.ams.org/tex/} or via FTP to \url{ftp.ams.org} (login as \texttt{anonymous}, enter username as password, and type \texttt{cd pub/author-info}). The \textit{AMS Author Handbook} and the \textit{Instruction Manual} are available in PDF format following the author packages link from \url{www.ams.org/tex/}. The author package can also be obtained free of charge by sending email to \texttt{pub@ams.org} (Internet) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify \texttt{AMS-LATEX} or \texttt{AMS-TEX}, Macintosh or IBM (3.5) format, and the publication in which your paper will appear. Please be sure to include your complete mailing address.

At the time of submission, authors should indicate if the paper has been prepared using \texttt{AMS-LATEX} or \texttt{AMS-TEX} and provide the Editor with a paper manuscript that matches the electronic manuscript. The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper manuscript to the Editor, who will forward a copy to the Providence office. Editors will require authors to send their electronically prepared manuscripts to the Providence office in a timely fashion. Electronically prepared manuscripts can be sent via email to \texttt{pub-submit@ams.org} (Internet) or on diskette to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

**Electronic graphics.** Comprehensive instructions on preparing graphics are available starting from \url{www.ams.org/jourhtml/authors.html}. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or
other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

AMS policy on making changes to articles after posting. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata article to the Editor. The errata article will appear in a future print issue and will link back and forth on the web to the original article online.

Secure manuscript tracking on the Web and via email. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/ or via email sent to mstrack-query@ams.org. To access by email, on the subject line of the message simply enter the AMS ID and Article ID. To track more than one manuscript by email, choose one of the Article IDs and enter the AMS ID and the Article ID followed by the word all on the subject line. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to tran-query@ams.org.

TeX files available. Beginning with the January 1992 issue of the Bulletin and the January 1996 issues of Transactions, Proceedings, Mathematics of Computation, and the Journal of the AMS, TeX files can be downloaded from the AMS website, starting from www.ams.org/journals/. Authors without Web access may request their files at the address given below after the article has been published. For Bulletin papers published in 1987 through 1991 and for Transactions, Proceedings, Mathematics of Computation, and the Journal of the AMS papers published in 1987 through 1995, TeX files are available upon request for authors without Web access by sending email to file-request@ams.org or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the
name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The \TeX{} file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because \TeX{} production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, \TeX{} files cannot be guaranteed to run through the author’s version of \TeX{} without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author’s \TeX{} environment.

**Inquiries.** Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to tran-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
Editors

The traditional method of submitting a paper is to send two hard copies to the appropriate editor. Subjects, and the editors associated with them, are listed below.

In principle the Transactions welcomes electronic submissions, and some of the editors, those whose names appear below with an asterisk (*), have indicated that they prefer them. Editors reserve the right to request hard copies after papers have been submitted electronically. Authors are advised to make preliminary inquiries to editors as to whether they are likely to be able to handle submissions in a particular electronic form.

**Algebra**, KAREN E. SMITH, Department of Mathematics, University of Michigan, Ann Arbor, MI 48109-1109 USA; e-mail: ksmith@math.lsa.umich.edu

**Algebraic geometry and commutative algebra**, LAWRENCE EIN, Department of Mathematics, University of Illinois, 851 S. Morgan (M/C 249), Chicago, IL 60607-7045 USA; e-mail: ein@uic.edu

**Algebraic topology and cohomology of groups**, STEWART PRIDDY, Department of Mathematics, Northwestern University, 2033 Sheridan Road, Evanston, IL 60288-2730 USA; e-mail: priddy@math.nwu.edu

**Combinatorics**, SERGEY FOMIN, Department of Mathematics, University of Michigan, East Hall, Ann Arbor, MI 48109-1109 USA; e-mail: fomin@math.lsa.umich.edu

**Complex analysis and geometry**, D. H. PHONG, Department of Mathematics, Columbia University, 2900 Broadway, New York, NY 10027-0029 USA; e-mail: phong@math.columbia.edu

**Differential geometry and global analysis**, LISA C. JEFFREY, Department of Mathematics, University of Toronto, 100 St. George Street, Toronto, Ontario, Canada M5S 3G3; e-mail: jeffrey@math.toronto.edu

**Dynamical systems and ergodic theory**, ROBERT F. WILLIAMS, Department of Mathematics, University of Texas, Austin, TX 78712-1082 USA; e-mail: bob@math.utexas.edu

**Functional analysis and operator algebras**, DAN VOICULESCU, Department of Mathematics, University of California, Berkeley, CA 94720-0001 USA; e-mail: dvv@math.berkeley.edu

**Geometric topology, knot theory, and hyperbolic geometry**, ABIGAIL THOMPSON, Department of Mathematics, University of Wisconsin, Davis, CA 95616-5224 USA; e-mail: thompson@math.ucdavis.edu

**Harmonic analysis, representation theory, and Lie theory**, ROBERT J. STANTON, Department of Mathematics, Ohio State University, 231 West 18th Avenue, Columbus, OH 43210-1174 USA; e-mail: stanton@math.ohio-state.edu

* **Logic**, THEODORE SLAMAN, Department of Mathematics, University of California, Berkeley, CA 94720-3840 USA; e-mail: slaman@math.berkeley.edu

* **Number theory**, HAROLD G. DIAMOND, Department of Mathematics, University of Illinois, 1409 West Green Street, Urbana, IL 61801-2917 USA; e-mail: diamond@math.uiuc.edu

* **Ordinary differential equations and applied mathematics**, PETER W. BATES, Department of Mathematics, Michigan State University, East Lansing, MI 48824-1027 USA; e-mail: bates@math.msu.edu

* **Partial differential equations**, PATRICIA E. BAUMAN, Department of Mathematics, Purdue University, West Lafayette, IN 47907-1395 USA; e-mail: bauman@math.purdue.edu

* **Probability and statistics**, KRZYSZTOF BURDZY, Department of Mathematics, University of Washington, Box 354350, Seattle, WA 98195-4350 USA; e-mail: burdzy@math.washington.edu

* **Real and harmonic analysis and geometric partial differential equations**, WILLIAM BECKNER, Department of Mathematics, University of Texas, Austin, TX 78712-1082 USA; e-mail: beckner@math.utexas.edu

All other communications to the editors should be addressed to the Managing Editor, WILLIAM BECKNER, Department of Mathematics, University of Texas, Austin, TX 78712-1082 USA; e-mail: beckner@math.utexas.edu

---

MEMOIRS OF THE AMERICAN MATHEMATICAL SOCIETY

Memoirs is devoted to research in pure and applied mathematics of the same nature as Transactions. An issue consists of one or more separately bound research tracts for which the authors provide reproduction copy. Papers intended for Memoirs should normally be at least 80 pages in length. Memoirs has the same editorial committee as Transactions; so such papers should be addressed to one of the editors listed above.
Markus P. Brodmann, Mordechai Katzman, and Rodney Y. Sharp, Associated primes of graded components of local cohomology modules ......................................................... 4261
S. Kuhlmann and M. Marshall, Positivity, sums of squares and the multidimensional moment problem ......................................................... 4285
Carolina Araujo, Kähler-Einstein metrics for some quasi-smooth log del Pezzo surfaces ................................................................. 4303
Art M. Duval and Victor Reiner, Shifted simplicial complexes are Laplacian integral ................................................................. 4313
Lidia Angeleri-Hügel and Jan Trlifaj, Tilting theory and the finitistic dimension conjectures ................................................................. 4345
Terrell L. Hodge and Brian J. Parshall, On the representation theory of Lie triple systems ................................................................. 4359
Jeb F. Willenbring, An application of the Littlewood restriction formula to the Kostant-Rallis theorem ................................................................. 4393
Christopher P. Bendel, Daniel K. Nakano, and Cornelius Pillen, Extensions for finite Chevalley groups II ................................................................. 4421
Valeri A. Faiziev, Themistocles M. Rassias, and Prasanna K. Sahoo, The space of \((\psi, \gamma)\)-additive mappings on semigroups ................................................................. 4455
Andreas Defant, Mieczysław Mastyło, and Carsten Michels, Summing inclusion maps between symmetric sequence spaces ................................................................. 4473
Daniel Guan, Classification of compact complex homogeneous spaces with invariant volumes ................................................................. 4493
Manuel Gutiérrez, Francisco J. Palomo, and Alfonso Romero, A Berger-Green type inequality for compact Lorentzian manifolds ................................................................. 4505
Benjamin Muckenhoupt and David W. Webb, Two-weight norm inequalities for the Cesàro means of Hermitezian manifolds ................................................................. 4525
Zhi Lü, Involutions fixing \(\mathbb{R}^{p,q}\cup\mathbb{P}(h,i), I\) ................................................................. 4539
Kathryn Hess and Paul-Eugène Parent, Emergence of the Witt group in the cellular lattice of rational spaces ................................................................. 4571
R. Bruce Richter and Carsten Thomassen, 3-connected planar spaces uniquely embed in the sphere ................................................................. 4585
Tullio Ceccherini-Silberstein and Wolfgang Woess, Growth and ergodicity of context-free languages ................................................................. 4597
Hassan Allouba, Brownian-time processes: The PDE connection II and the corresponding Feynman-Kac formula ................................................................. 4627
Zhen-Qing Chen, Gaugeability and conditional gaugeability ................................................................. 4639
