

2022-2023

Faculty Salaries Report

Sarah Bryant, Skylar R. Homan, and Nusrat Jahan

This salary report is one part of the Annual Survey of Mathematical and Statistical Sciences, a nation-wide survey administered by the AMS on behalf of the American Statistical Association (ASA), the Institute for Mathematical Statistics (IMS), the Mathematical Association of America (MAA), the Society for Industrial and Applied Mathematics (SIAM), the Association for Women in Mathematics (AWM), the Caucus for Women in Statistics (CWS), and the National Association of Mathematicians (NAM). It provides a look at the salaries of faculty in the Mathematical Sciences in the US by rank in several different department groupings based on discipline, highest degree offered, and graduate counts. The graphs here are identified by those group names, and the group definitions are given at the end of the report.

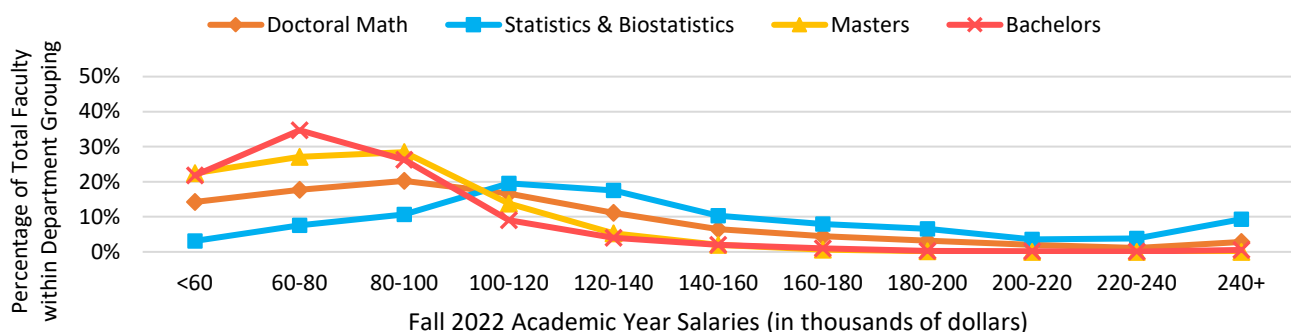

Departments were asked to report for each rank the number of tenured, tenure-track, and non-tenure-track full time faculty whose 2022-23 academic-year salaries fell within given salary intervals. Reporting salary data in this fashion ensures confidentiality of individual responses, though it does mean that the quartiles reported in the tables are approximations. The quartiles reported have been estimated to the nearest \$500 assuming that the density over each interval is uniform.

Note: In the graph for all faculty salaries on this page, the percentage scale ranges from 0% to 50%, while the scale for all other graphs is 0% to 100%. The non-tenure-track faculty are reported in this report alongside the other full-time faculty; pay-by-course faculty are summarized in the last table of this report.

Faculty Salary Reports from prior years are available at <https://www.ams.org/annual-survey/salaries>. Interpretation of historical trends should be made with care. For instance, one factor influencing year to year changes in the mean reported salaries may be differences in the sets of responding departments within the groups.

Figure 1 provides a comparative view of faculty salaries among four broad groups: departments whose highest degree is a (1) PhD in mathematics (including applied mathematics departments), (2) PhD in statistics or biostatistics, (3) master’s degree in mathematics, and (4) bachelor’s degree in mathematics. In the remainder of this report, salary distributions are broken down within finer departmental categories and by faculty rank. Throughout the report, when describing departments included in (1) we may abbreviate by type (e.g., “Public Large”).

ANNUAL SURVEY

Mean Salary Trends

From tables corresponding to Figures 2 through 11, it can be seen that mean salaries for most faculty ranks and institution types increased since 2019 (the last year the Annual Survey Report was released) with the exception of assistant professors. In large and medium public doctoral mathematics departments, as well as large and small private ones, the average annual salary for assistant professors, both new and existing, decreased since 2019 by anywhere from \$3,000 to almost \$20,000. While survey

data from 2020 and 2021 has not been analyzed, it is possible that these decreases are due to the factors introduced by the COVID-19 pandemic, which began in early 2020, affecting hiring. Figures 12 through 18 below present the mean salary trends from 2012 to 2022 across various institution types for each faculty rank. It can be observed that large institutions, both private and public, generally paid higher salaries across all faculty ranks.

Box and Whisker Plots

Box and whisker plots allow for visual comparison of quartile data, including identification of outliers, and have been included in the report this year

Since faculty salaries were collected as ranges, box and whisker plots were created using the midpoint of each range, so all values shown are approximate. Whiskers were drawn to a maximum length of 1.5 times the interquartile range (Q3 minus Q1), with data points lying beyond that distance represented as diamonds.

Departmental Groupings

In this report, *Mathematical and Statistical Sciences* departments are those in four-year institutions in the US that refer to themselves with a name that incorporates (with a few exceptions) “Mathematics” or “Statistics” in some form. For instance, the term includes, but is not limited to, departments of “Mathematics,” “Mathematical Sciences,” “Mathematics and Statistics,” “Mathematics and Computer Science,” “Applied Mathematics,” “Statistics,” and “Biostatistics.” *Mathematics (Math)* refers to departments that (with exceptions) have “mathematics” in the name; *Stat/Biostat (Stats)* refers to departments that incorporate (again, with exceptions) “statistics” or “biostatistics” in the name but do not use “mathematics.”

Listings of the actual departments that comprise these groups are available on the AMS website at <https://www.ams.org/annual-survey/groupings>.

A department is in Group...	...when its subject area, highest degree offered, and/or PhD production rate* p are...
Math Public Large	Math PhD, $p \geq 7.0$
Math Public Medium	Math PhD, $3.9 \leq p \leq 7.0$
Math Public Small	Math PhD, $p < 3.9$
Math Private Large	Math PhD, $p \geq 3.9$
Math Private Small	Math PhD, $p < 3.9$
Applied Math	Applied Mathematics, PhD
Statistics	Statistics, PhD
Biostatistics	Biostatistics, PhD
Masters	Math, master's
Bachelors	Math, bachelor's
Doctoral Math	Math Public, Math Private, & Applied Math
Stat/Biostat or Stats	Statistics & Biostatistics
Math	All groups except Statistics & Biostatistics

Faculty Categories

The faculty categories used in this report are described below. Departments were asked to report any

faculty member who was full-time in the institution for the academic year and at least half-time in the department. Each faculty member was reported in exactly one of these categories. Tenure-track faculty includes full-time faculty who hold tenured/tenure-eligible positions (i.e., only those individuals who are tenured full professors, other tenured and tenure-eligible faculty). Postdoctoral faculty includes full-time faculty who have teaching and/or research responsibilities, but for a strictly limited term of employment (i.e., those individuals who hold a temporary position primarily intended to provide an opportunity to continue training or to further research experience). Non-tenure-track faculty includes full-time faculty eligible for benefits and with an appointment that lasts at least one academic year. These faculty hold appointments that are renewable (potentially unlimited), fixed-term but not renewable, or temporary. Typical titles for these positions are Lecturer, Senior Lecturer, Instructor, Senior Instructor, Associate/Assistant/Full Teaching Professor, Professor of the Practice, or Clinical Professor, and similar titles for research-only faculty. Part-time faculty includes those individuals who are hired term-by-term, paid by the course, and/or those in phased retirement.

Acknowledgements

The Annual Survey attempts to provide an accurate appraisal and analysis of various aspects of the academic mathematical sciences scene for use and benefit of the community and for filling the information needs of the professional organizations. The Annual Survey relies heavily on the conscientious efforts of the dedicated staff members of mathematical sciences departments for the quality of its information. On behalf of the Joint Data Committee and the Annual Survey Staff, we thank the many secretarial and administrative staff members in the mathematical sciences departments for their cooperation and assistance in responding to the survey questionnaires.
