SUBSCRIPTION INFORMATION: MATHEMATICS OF COMPUTATION is published quarterly, with issues numbered serially since Volume 1, Number 1. Subscription prices for Volumes 56 and 57 (1991) are $205 list; $164 institutional member; $133 member of CBMS organizations; $123 individual AMS member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmember institutions and organizations after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $9; subscribers in India must pay a postage surcharge of $18. Expedited delivery to destinations in North America $12; elsewhere $40. Combination paper and microfiche subscription prices are $273 list; $219 institutional member. Microfiche of each issue will be mailed the fastest way before the issue is mailed by the printer.

BACK NUMBER INFORMATION: Back number prices *per volume* are for Volumes 1–21, $90 list, $72 member; for Volumes 22–33, $136 list, $109 institutional member; for Volumes 34–43, $90 list, $72 institutional member; Volumes 44–45, $127 list, $102 institutional member; Volumes 46–47, $139 list, $111 institutional member; Volumes 48–49, $148 list, $118 institutional member; Volumes 50–51, $149 list, $119 institutional member; for Volumes 52–53, $152 list, $122 institutional member; for Volumes 54–55, $144 list, $115 institutional member. Back volumes may be purchased on microfilm or microfiche from University Microfilms International, 300 North Zeeb Road, Ann Arbor, MI 48106.

UNPUBLISHED MATHEMATICAL TABLES: The editorial office of the journal maintains a repository of Unpublished Mathematical Tables (UMT). When a table is deposited in the UMT repository a brief summary of its contents is published in the section *Reviews and Descriptions of Tables and Books*. Upon request, the chairman of the editorial committee will supply copies of any table for a nominal cost per page. All tables and correspondence concerning the UMT should be sent to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, IN 47907.

Orders for subscriptions and publications of the American Mathematical Society should be addressed to the AMS, P.O. Box 1571, Annex Station, Providence, RI 02901-1571. *All orders must be accompanied by payment.* Other correspondence should be addressed to P.O. Box 6248, Providence, RI 02940-6248.

MATHEMATICS OF COMPUTATION is published quarterly by the American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213. Second-class postage is paid at Providence, Rhode Island, and additional mailing offices. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248.

Information for Contributors

Authors are encouraged to prepare articles electronically with the $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX software package in the AMS pre-print style and to provide the article in this electronic form for typesetting. While this procedure may not reduce the interval between submission and publication of an article, generally much more accurate copy will be returned for proofreading. Production time for manuscripts prepared with other systems, even TEX itself without $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX, currently prevents cost-effective use of the existing electronic form. Before sending an $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX manuscript for typesetting, contact the AMS Composition department for details.

Manuscripts prepared by some means other than $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX should be doubled-spaced and produced in the format used by the journal. For journal abbreviations, see the latest *Mathematical Reviews* volume index. An author should submit the original and two copies of the manuscript and retain one copy. The author may suggest an appropriate editor for his paper. It is recommended that the author acquaint himself with the pertinent material contained in "A Manual for Authors of Mathematical Papers," which is available from the American Mathematical Society. All contributions intended for publication and all books for review should be addressed to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, Indiana 47907. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Chairman of the Editorial Committee, and it is the responsibility of the author to submit manuscripts directly to this office.

Each article submitted for publication must be accompanied by a brief and reasonably self-contained abstract, and by 1991 *Mathematics Subject Classification* numbers. If a list of key words and phrases is included, it will be printed as a footnote on the first page. A list of the classification numbers may be found in the 1990 Subject Index to Mathematical Reviews. Authors are also encouraged to supply electronic addresses when available. These will be printed after the postal address at the end of each article.

Copying and Reprinting

Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addessed to the Manager of Editorial Services, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940-6248.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that the fee of $1.00 plus $.25 per page for each copy be paid directly to Copyright Clearance Center, Inc., 27 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.

Mathematical Impressions

Anatoliĭ T. Fomenko

"*I think of my drawings as if they were photographs of a strange but real world, and the nature of this world, one of infinite objects and processes, is not well known. Clearly there is a connection between the mathematical world and the real world.... This is the relationship I see between my drawings and mathematics.*"—Anatoliĭ Fomenko, in the Introduction

Anatoliĭ Fomenko is a Soviet mathematician with a talent for expressing abstract mathematical concepts through artwork. Some of his works echo those of M.C. Escher in their meticulous rendering of shapes and patterns, while other pieces seem to be more visceral expressions of mathematical ideas. Stimulating to the imagination and to the eye, his rich and evocative work can be interpreted and appreciated in various ways—mathematical, aesthetic, or emotional.

This book contains 84 reproductions of works by Fomenko (23 of them in color). In the accompanying captions, Fomenko explains the mathematical motivations behind the illustrations as well as the emotional, historical, or mythical subtexts they evoke. The illustrations carry the viewer through a mathematical world consisting not of equations and dry logic, but of intuition and inspiration.

Since the mid-1970s, Fomenko has created more than 280 illustrations. Not only have his images filled pages of his own numerous books on geometry, but they have also been chosen to illustrate books on other subjects, such as statistics, probability, and number theory. In addition, his works have found their way into the Soviet scientific and popular press and have been displayed in more than 100 exhibits in the Soviet Union, Holland, India, and much of Eastern Europe.

Fomenko describes his images as "deep reflections about the essence of being and about the place of modern man—in particular, the learned man—in the stormy and unpredictable world surrounding him." His illustrations are the product of a sensitive, aesthetically attuned mind diving deep below the surface of modern mathematics and emerging with great stories to tell.

Stories about Maxima and Minima

V. M. Tikhomirov
translated by Abe Shenitzer

Throughout the history of mathematics, maximum and minimum problems have played an important role in the evolution of the field. Many beautiful and important problems have appeared in a variety of branches of mathematics and physics, as well as in other fields of sciences. The greatest scientists of the past—Euclid, Archimedes, Heron, the Bernoullis, Newton, and many others—took part in seeking solutions to these concrete problems. The solutions stimulated the development of the theory, and, as a result, techniques were elaborated that made possible the solution of a tremendous variety of problems by a single method.

This book, copublished with the Mathematical Association of America (MAA), presents fifteen "stories" designed to acquaint readers with the central concepts of the theory of maxima and minima, as well as with its illustrious history. Unlike most AMS publications, the book is accessible to high school students and would likely be of interest to a wide variety of readers.

In Part One, the author familiarizes readers with many concrete problems that lead to discussion of the work of some of the greatest mathematicians of all time. Part Two introduces a method for solving maximum and minimum problems that originated with Lagrange. While the content of this method has varied constantly, its basic conception has endured for over two centuries. The final story is addressed primarily to those who teach mathematics, for it impinges on the question of how and why to teach. Throughout the book, the author strives to show how the analysis of diverse facts gives rise to a general idea, how this idea is transformed, how it is enriched by new content, and how it remains the same in spite of these changes.

1980 *Mathematics Subject Classifications*: 00, 01, 46, 49

Individual Member $184, Reviewer $154
To order, please specify REVCOM/86MC

Prepayment required. Review volumes are shipped by surface at no extra charge; add $6.50 per title for air delivery. Prices subject to change.

Order from the American Mathematical Society, P. O. Box 1571, Annex Station, Providence, RI 02901-1571 or call toll free 800-321-4AMS (321-4267) in the continental U.S. and Canada to charge with VISA or MasterCard.

Reviews in Global Analysis, 1980-86
Introduction by Anthony J. Tromba

5 volumes, 3920 pages, softcover
1989, ISBN 0-8218-0104-X, LC 88-10565
List $325, Institutional Member $260,
Individual Member $195, Reviewer $163
To order, please specify REVGLO/86MC

Reviews in Numerical Analysis, 1980-86
Introduction by Gene H. Golub

5 volumes, 2701 pages, softcover
1989, ISBN 0-8218-0102-3, LC 87-25478
List $277, Institutional Member $222,
Individual Member $166, Reviewer $139
To order, please specify REVNAN/86MC

Reviews in Partial Differential Equations, 1980-86
Introduction by Murray H. Protter

5 volumes, 3998 pages, softcover
1989, ISBN 0-8218-0103-1, LC 88-6681
List $325, Institutional Member $260
Individual Member $195, Reviewer $163
To order, please specify REVPDE/86MC

Special Combination Offers
Reviews in Partial Differential Equations, 1980-86
and Reviews in Global Analysis, 1980-86
ISBN 0-8218-0143-0
List $520, Institutional Member $416,
Individual Member $312, Reviewer $260
To order, please specify REVPGL/86MC

Reviews in Partial Differential Equations, 1980-86
and Reviews in Numerical Analysis, 1980-86
ISBN 0-8218-0144-9
List $480, Institutional Member $384,
Individual Member $288, Reviewer $240
To order, please specify REVPNA/86MC

Subscribe to the Award Winning

JOURNAL
OF THE

AMERICAN MATHEMATICAL SOCIETY

The *Journal of the American Mathematical Society* is a quarterly journal containing research articles of the highest quality in all areas of pure and applied mathematics.

Editors

H. Blaine Lawson, Jr.
Robert D. MacPherson
Richard Melrose
Wilfried Schmid
Robert E. Tarjan

ISSN 0894-0347
Quarterly, Volume 4, 1991
Code 91JAMS/MC

1991 Subscription Prices:
List $126*, Institutional Member $101*, Individual Member $76*

* Add for postage: Surface delivery to destinations outside the U. S. and India -- $8; to India -- $18. Expedited delivery to destinations in North America $12; elsewhere -- $25.

Note: Subscriptions to AMS journals are sold only on a calendar year basis (January-December); split year and multiple year subscription orders are not accepted. Subscription orders received from nonmember institutions and organizations after January 1 of the subscription year will be sold at list price plus a 10% late charge (rounded); the maximum late charge for any subscription is $200. Subscription cancellations from nonmembers will not be accepted after March 1 of the subscription year. Cancellation refunds are computed by deducting an $8 cancellation fee, and the price of each issue already shipped, from the price paid.

To order: Prepayment required in U. S. funds. Mail to AMS, Annex Station, P. O. Box 1571, Providence, Rhode Island 02901-1571 U.S.A. or call 800-321-4AMS (321-4267) in the U.S. and Canada to use VISA or MasterCard.

(*Continued from back cover*)

Stanislav Jakubec, Juraj Kostra, and Karol Nemoga, On the existence of an integral normal basis generated by a unit in prime extensions of rational numbers 809
Yoshiharu Kurita and Makoto Matsumoto, Primitive t-nomials ($t = 3, 5$) over $GF(2)$ whose degree is a Mersenne exponent ≤ 44497..... 817
Brigitte Vallée, Generation of elements with small modular squares and provably fast integer factoring algorithms..... 823
R. Ernvall and T. Metsänkylä, Cyclotomic invariants for primes between 125000 and 150000 851
Patrick Costello, Amicable pairs of the form $(i, 1)$ 859
W. N. Colquitt and L. Welsh, Jr., A new Mersenne prime 867
Achim Flammenkamp, New sociable numbers 871
Reviews and Descriptions of Tables and Books..... 875
Nürnberger **24**, Tolimieri, An, and Lu **25**, Mockus **26**, United Laboratories, Inc. **27**, Belinfante and Kolman **28**
Index to Volume 56 887
Supplement to "A table of totally real quintic number fields" by **F. Diaz y Diaz** S1

No microfiche supplement in this issue

MATHEMATICS OF COMPUTATION
TABLE OF CONTENTS
April 1991

Charles I. Goldstein, Multigrid analysis of finite element methods with numerical integration 409

R. E. Ewing, R. D. Lazarov, and P. S. Vassilevski, Local refinement techniques for elliptic problems on cell-centered grids I. Error analysis . 437

James H. Bramble and Jinchao Xu, Some estimates for a weighted L^2 projection 463

Junping Wang, Superconvergence and extrapolation for mixed finite element methods on rectangular domains 477

Georgios D. Akrivis and Vassilios A. Dougalis, Finite difference discretizations of some initial and boundary value problems with interface .. 505

Max D. Gunzburger, Amnon J. Meir, and Janet S. Peterson, On the existence, uniqueness, and finite element approximation of solutions of the equations of stationary, incompressible magnetohydrodynamics 523

David Gottlieb and Eitan Tadmor, The CFL condition for spectral approximations to hyperbolic initial-boundary value problems 565

Thomas Hagstrom, Asymptotic boundary conditions for dissipative waves: General theory 589

Mingyou Huang, A Hamiltonian approximation to simulate solitary waves of the Korteweg-de Vries equation 607

Christian Lécot, A quasi-Monte Carlo method for the Boltzmann equation 621

Brynjulf Owren and Marino Zennaro, Order barriers for continuous explicit Runge-Kutta methods 645

Martin Stynes and Eugene O'Riordan, An analysis of a singularly perturbed two-point boundary value problem using only finite element techniques..... 663

Qiang Ye, A convergence analysis for nonsymmetric Lanczos algorithms. 677

T. Y. Li and Xiaoshen Wang, Solving deficient polynomial systems with homotopies which keep the subschemes at infinity invariant..... 693

Bernd Fischer and Gene H. Golub, On generating polynomials which are orthogonal over several intervals 711

Philip Rabinowitz, Uniform convergence results for Cauchy principal value integrals 731

Takemitsu Hasegawa and Tatsuo Torii, An automatic quadrature for Cauchy principal value integrals 741

Daniela Calvetti, A stochastic roundoff error analysis for the Fast Fourier Transform 755

Richard Blecksmith, John Brillhart, and Irving Gerst, On a certain (mod 2) identity and a method of proof by expansion 775

Henri Darmon, Note on a polynomial of Emma Lehmer 795

F. Diaz y Diaz, A table of totally real quintic number fields 801

(Continued on inside back cover)
