Mathematics of Computation

This journal publishes research articles in computational mathematics. Areas covered include numerical analysis, the application of computational methods, algorithms for advanced computer architectures, computational number theory and algebra, and related fields. Table errata and reviews of books in areas related to computational mathematics are also included.

Subscription information. *Mathematics of Computation* is published quarterly. Subscription prices for Volumes 60 and 61 (1993) are \$249 list; \$199 institutional member; \$162 member of CBMS organizations; \$149 individual AMS member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmember institutions and organizations after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of \$9; subscribers in India must pay a postage surcharge of \$18. Expedited delivery to destinations in North America \$13; elsewhere \$40.

Back number information. For back issues see the *AMS Catalog of Publications*.

Subscriptions and orders should be addressed to the American Mathematical Society, P. O. Box 1571, Annex Station, Providence, RI 02901-1571. *All orders must be accompanied by payment.* Other correspondence should be addressed to P. O. Box 6248, Providence, RI 02940-6248.

Unpublished Mathematical Tables. The editorial office of the journal maintains a repository of Unpublished Mathematical Tables (UMT). When a table is deposited in the UMT repository a brief summary of its contents is published in the section *Reviews and Descriptions of Tables and Books*. Upon request, the chairman of the editorial committee will supply copies of any table for a nominal cost per page. All tables and correspondence concerning the UMT should be sent to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, IN 47907.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Manager of Editorial Services, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that the fee of \$1.00 plus \$.25 per page for each copy be paid directly to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale.

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213. Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

TABLE OF CONTENTS

JANUARY 1993

James H. Bramble, Zbigniew Leyk, and Joseph E. Pasciak , Iterative schemes for nonsymmetric and indefinite elliptic boundary value problems .	1
Torgeir Rusten and Ragnar Winther , Substructure preconditioners for elliptic saddle point problems	23
Howard Swann , On the use of Lagrange multipliers in domain decomposition for solving elliptic problems	49
Donald A. French and J. Thomas King , Analysis of a robust finite element approximation for a parabolic equation with rough boundary data .	79
Ch. Lubich and A. Ostermann , Runge-Kutta methods for parabolic equations and convolution quadrature	105
Nai-Ying Zhang , On fully discrete Galerkin approximations for partial integro-differential equations of parabolic type	133
Kenneth Eriksson and Claes Johnson , Adaptive Streamline Diffusion finite element methods for stationary convection-diffusion problems	167
J. A. Mackenzie and K. W. Morton , Finite volume solutions of convection-diffusion test problems	189
Helge Holden and Nils Henrik Risebro , A method of fractional steps for scalar conservation laws without the CFL condition	221
Jian-Guo Liu and Zhouping Xin , L^1 -stability of stationary discrete shocks	233
Eitan Tadmor , Total variation and error estimates for spectral viscosity approximations	245
Stefan Heinrich and Peter Mathé , The Monte Carlo complexity of Fredholm integral equations	257
Seymour Haber , Two formulas for numerical indefinite integration	279
John A. Crow , Quadrature of integrands with a logarithmic singularity ..	297
Clément Frappier and Patrick Olivier , A quadrature formula involving zeros of Bessel functions	303
F. Peherstorfer , On the remainder of Gaussian quadrature formulas for Bernstein-Szegő weight functions	317
Peter J. Grabner and Robert F. Tichy , Spherical designs, discrepancy and numerical integration	327
Horst Alzer , Some gamma function inequalities	337
Elliot Linzer and Ephraim Feig , Modified FFTs for fused multiply-add architectures	347
Dakai Wang and Aaldert Compagner , On the use of reducible polynomials as random number generators	363
Jürgen Eichenauer-Herrmann , Statistical independence of a new class of inversive congruential pseudorandom numbers	375
S. Gupta and D. Zagier , On the coefficients of the minimal polynomials of Gaussian periods	385

A. O. L. Atkin and F. Morain , Finding suitable curves for the elliptic curve method of factorization	399
Alfred J. Menezes, Scott A. Vanstone, and Robert J. Zuccherato , Counting points on elliptic curves over F_{2^m}	407
H. J. Godwin and J. R. Smith , On the Euclidean nature of four cyclic cubic fields	421
Jukka Pihko , On the minimal elements for the sequence of all powers in the Lemoine-Kátai algorithm	425
Reviews and Descriptions of Tables and Books	431
Mikhlin 1, Szabó and Babuška 2, Schiesser 3, Zwillinger 4, Dongarra, Messina, Sorensen, and Voigt, Editors 5, Snyder and McCuen 6, Farin, Editor 7, Barnhill, Editor 8, Vavasis 9, Deák 10, Brackx and Constaes 11, Piacentini Cattaneo and Strickland, Editors 12	
Supplement to “Adaptive Streamline Diffusion finite element methods for stationary convection-diffusion problems” by Kenneth Eriksson and Claes Johnson	S1

TABLE OF CONTENTS

APRIL 1993

James H. Bramble and Joseph E. Pasciak , New estimates for multilevel algorithms including the V-cycle	447
Per Lötstedt and Bertil Gustafsson , Fourier analysis of multigrid methods for general systems of PDEs	473
Christophe Devulder, Martine Marion, and Edriss S. Titi , On the rate of convergence of the nonlinear Galerkin methods	495
J. P. Lohéac, F. Nataf, and M. Schatzman , Parabolic approximations of the convection-diffusion equation	515
Tian-xiao Zhou and Min-fu Feng , A least squares Petrov-Galerkin finite element method for the stationary Navier-Stokes equations	531
Bernard Bialecki and Ryan I. Fernandes , Orthogonal spline collocation Laplace-modified and alternating-direction methods for parabolic problems on rectangles	545
Martin Buhmann and Arie Iserles , Stability of the discretized pantograph differential equation	575
R. A. Trompert and J. G. Verwer , Runge-Kutta methods and local uniform grid refinement	591
L. Abia and J. M. Sanz-Serna , Partitioned Runge-Kutta methods for separable Hamiltonian problems	617
Mohamed Bin Suleiman , Some necessary conditions for convergence of the GBDF methods	635

Paul N. Swarztrauber , A parallel algorithm for computing the eigenvalues of a symmetric tridiagonal matrix.....	651
T. Y. Li and Xiaoshen Wang , Solving real polynomial systems with real homotopies	669
José Mario Martínez , A theory of secant preconditioners	681
P. P. B. Eggermont and Ch. Lubich , Operational quadrature methods for Wiener-Hopf integral equations.....	699
Takemitsu Hasegawa, Hiroshi Sugiura, and Tatsuo Torii , Positivity of the weights of extended Clenshaw-Curtis quadrature rules	719
Allan J. MacLeod , Chebyshev expansions for modified Struve and related functions	735
Raymond Couture, Pierre L'Ecuyer, and Shu Tezuka , On the distribution of k -dimensional vectors for simple and combined Tausworthe sequences	749
Shu Tezuka and Masanori Fushimi , Calculation of Fibonacci polynomials for GFSR sequences with low discrepancies.....	763
Taizo Kanenobu and Toshio Sumi , Polynomial invariants of 2-bridge knots through 22 crossings	771
Gerhard J. A. Schneider , The structure of the projective indecomposable modules of the Suzuki group $Sz(8)$ in characteristic 2	779
Igor E. Shparlinski , On bivariate polynomial factorization over finite fields	787
M. Pohst and J. Graf v. Schmettow , On the computation of unit groups and class groups of totally complex quartic fields	793
Hiroyuki Fujita , The minimum discriminant of totally real algebraic number fields of degree 9 with cubic subfields	801
Robert Styer , Small two-variable exponential Diophantine equations	811
W. Plesken and M. Pohst , Constructing integral lattices with prescribed minimum. II	817
Zhenxiang Zhang , On a problem of Erdős concerning primitive sequences	827
Zhenxiang Zhang , A B_2 -sequence with larger reciprocal sum	835
R. G. E. Pinch , Squares in quadratic progression	841
Reviews and Descriptions of Tables and Books	847
Aspray 13, Buchanan and Turner 14, Golub and Ortega 15, Light, Editor 16, Light, Editor 17, Chen and Zhou 18, Haug and Deyo, Editors 19, Whiteman, Editor 20, Cohen, Halpern, and Joly, Editors 21, Chui 22, Brezinski 23, Brezinski and Zaglia 24, Espelid and Genz, Editors 25, Machielsen 26, Floudas and Pardalos, Editors 27, Bertsekas 28, Abell and Braselton 29, Maccallum and Wright 30, O'Malley, Editor 31, Nisan 32, Flournoy and Tsutakawa, Editors 33, Bergum, Philippou, and Horadam, Editors 34	
Corrigendum	877
Supplement to "Fourier analysis of multigrid methods for general systems of PDEs" by Per Lötstedt and Bertil Gustafsson	S3

Supplement to “On the distribution of k-dimensional vectors for simple and combined Tausworthe sequences” by Raymond Couture, Pierre L’Ecuyer, and Shu Tezuka	S11
Supplement to “Polynomial invariants of 2-bridge knots through 22 crossings” by Taizo Kanenobu and Toshio Sumi	S17
Supplement to “The structure of the projective indecomposable modules of the Suzuki group $Sz(8)$ in characteristic 2” by Gerhard A. Schneider	S29

Editorial Information

As of March 1, 1993, the backlog for this journal was approximately 2 issues. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months, reduced by the number of issues published in six months (the time necessary for editing and composing a typical issue).

A Copyright Transfer Agreement is required before a paper will be published in this journal. By submitting a paper to this journal, authors certify that the manuscript has not been submitted to nor is it under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors and Editors

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief and reasonably self-contained. Included with the footnotes to the paper, there should be the 1991 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. This may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual index of *Mathematical Reviews*, published with the December issue starting in 1990, as well as from the electronic service e-MATH [telnet e-MATH.ams.com (or telnet 130.44.1.100). Login and password are e-math]. For journal abbreviations used in bibliographies, see the list of serials in the latest *Mathematical Reviews* annual index. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

Electronically prepared manuscripts. The AMS encourages submission of electronically prepared manuscripts in $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$ or $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{T}\mathcal{E}\mathcal{X}$ because properly prepared electronic manuscripts save the author proofreading time and move more quickly through the production process. To this end, the Society has prepared “preprint” style files, specifically the amsppt style of $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$ and the amsart style of $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{T}\mathcal{E}\mathcal{X}$, which will simplify the work of authors and of the production staff. Those authors who make use of these style files from the beginning of the writing process will further reduce their own effort. Electronically submitted manuscripts prepared in plain $\mathcal{T}\mathcal{E}\mathcal{X}$ or $\mathcal{L}\mathcal{T}\mathcal{E}\mathcal{X}$ do not mesh properly with the AMS production systems and cannot, therefore, realize the same kind of expedited processing. Users of plain $\mathcal{T}\mathcal{E}\mathcal{X}$ should have little difficulty learning $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$, and $\mathcal{L}\mathcal{T}\mathcal{E}\mathcal{X}$ users will find that $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{T}\mathcal{E}\mathcal{X}$ is the same as $\mathcal{L}\mathcal{T}\mathcal{E}\mathcal{X}$ with additional commands to simplify the typesetting of mathematics.

Guidelines for Preparing Electronic Manuscripts provides additional assistance and is available for use with either $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$ or $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{T}\mathcal{E}\mathcal{X}$. Authors with FTP access may obtain *Guidelines* from the Society’s Internet node e-MATH@math.ams.org (130.44.1.100). For those without FTP access *Guidelines* can be obtained free of charge from the e-mail address guide-elec@math.ams.org (Internet) or from the Publications Department, American

Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When requesting *Guidelines*, please specify which version you want.

At the time of submission, authors should indicate if the paper has been prepared using \AA M S-T E X or \AA M S-L A T E X . The *Manual for Authors of Mathematical Papers* should be consulted for symbols and style conventions. The *Manual* may be obtained free of charge from the e-mail address `cust-serv@math.ams.org` or from the Customer Services Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. The Providence office should be supplied with a manuscript that corresponds to the electronic file being submitted.

Electronic manuscripts should be sent to the Providence office immediately after the paper has been accepted for publication. They can be sent via e-mail to `pub-submit@math.ams.org` (Internet) or on diskettes to the Publications Department address listed above. When submitting electronic manuscripts please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Authors and editors are encouraged to make the necessary submissions of electronically prepared manuscripts and proof copies in a timely fashion.

An author should submit the original and two copies of the manuscript and retain one copy. The author may suggest an appropriate editor for his paper. All contributions intended for publication and all books for review should be addressed to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, Indiana 47907. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Chairman of the Editorial Committee, and it is the responsibility of the author to submit manuscripts directly to this office.

Any inquiries concerning a paper that has been accepted for publication should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

Advances in SOVIET MATHEMATICS

Volumes 12 & 13

Topics in Nonparametric Estimation

R. Z. Khasminskiĭ, *Editor*

This book contains papers presented at the Seminar on Mathematical Statistics held at the Institute for Problems of Information Transmission of the Academy of Sciences in the former Soviet Union. The topics covered include density, regression, image estimation, adaptive estimation, stochastic approximation, median estimation, sequential experimental design, and large deviations for empirical measures. This book will be of interest to scientists and engineers who use probability and statistics, to mathematicians and applied statisticians who work in approximation theory, and to computer scientists who work in image analysis.

Idempotent Analysis

V. P. Maslov and S. N. Samborskiĭ, *Editors*

The articles in this collection show how idempotent analysis is playing a unifying role in many branches of mathematics related to external phenomena and structures—a role similar to that played by functional analysis in mathematical physics, or numerical methods in partial differential equations. Such a unification necessitates study of the algebraic and analytic structures appearing in spaces of functions with values in idempotent semirings. The papers collected here constitute an advance in this direction.

CONTEMPORARY MATHEMATICS

Volumes 139 & 140

Kazhdan-Lusztig Theory and Related Topics

Vinay Deodhar, *Editor*

This book is perhaps the first to discuss all aspects of the Kazhdan-Lusztig theory and will give readers a flavor of the range of topics involved. The articles present recent work in Kazhdan-Lusztig theory, including representations of Kac-Moody Lie algebras, geometry of Schubert varieties, intersection cohomology of stratified spaces, and some new topics such as quantum groups.

1991 *Mathematics Subject Classification*: 14, 17, 20, 22; 51, 55,

Geometric Analysis

Eric L. Grinberg, *Editor*

This volume contains the refereed proceedings of the Special Session on Geometric Analysis held at the AMS meeting in Philadelphia in October 1991. The papers in this collection should help to define better the notion of geometric analysis by illustrating emerging trends in the subject. Containing articles varying from the expository to the technical, this book presents the latest results in a broad range of analytic and geometric topics.

MONOGRAPHS**

Volumes 118-120

Algebraic Functions

Kenkichi Iwasawa, Translated by Goro Kato

This is a translation of Iwasawa's *Theory of Algebraic Functions*, which was originally published in Japanese. Because this book treats mainly the classical part of the theory of algebraic functions, emphasizing analytic methods, it provides an excellent introduction to the subject from the classical viewpoint.

1991 *Mathematics Subject Classification*: 14, 30; 33
ISBN 0-8218-4595-0, 287 pages (hardcover), April 1993

**Nonlinear Poisson Brackets.
Geometry and Quantization**

M. V. Karasev and V. P. Maslov

This book deals with the problem of constructing an analog of a Lie group for general nonlinear Poisson brackets and the quantization problem for such brackets in the semiclassical approximation. Many ideas of algebra, modern differential geometry, algebraic topology and operator theory are synthesized here. The authors prove all statements in detail, thus making the book accessible to graduate students.

1991 *Mathematics Subject Classification*: 14, 30; 33
ISBN 0-8218-4596-9, 287 pages (hardcover), April 1993

Gaussian Processes

Takeyuki Hida and Masuyuki Hitsuda

Aimed at students and researchers in mathematics, communications engineering, and economics, this book describes the probabilistic structure of a Gaussian process in terms of its canonical representation. The authors' approach is unique, involving causality in time evolution and information-theoretic aspects.

1991 *Mathematics Subject Classification*: 60
ISBN 0-8218-4598-3, 182 pages (hardcover), April 1993

CRM Monograph Series

Volume 1

Free Random Variables

D. V. Voiculescu, K. J. Dykema, and A. Nica

This book represents the first comprehensive introduction to free probability theory, a highly noncommutative probability theory with independence based on free products instead of tensor products. Basic examples of this kind of theory are provided by convolution operators on free groups and by the asymptotic behavior of large Gaussian random matrices. In addition to researchers and graduate students in mathematics, this book is of interest to physicists and others who use random matrices.

1991 *Mathematics Subject Classification*: 46; 47, 60

ISBN 0-8218-6999-X, 70 pages (hardcover), December 1992

Individual member \$23, List price \$39, Institutional member \$31

To order, please specify CRMM/1MC

Volume 2

Applied Integral Transforms

M. Ya. Antimirov, A. A. Kolyshkin,
and Rémi Vaillancourt

The first section of this book, which proceeds mainly by examples and includes exercises, requires little mathematical background and can be considered an introduction to the subject of integral transforms. In the second part of the book, the method of integral transforms is used to solve modern applied problems in convective stability, temperature fields in oil strata, and eddy current testing. The choice of topics reflects the authors' research experience and involvement in industrial applications.

1991 *Mathematics Subject Classification*: 35; 76, 80, 78, 44

ISBN 0-8218-6998-1, 265 pages (hardcover), February 1993

Introducing...

Graduate Studies in Mathematics

The Series...

Graduate Studies in Mathematics is the first graduate text series to be published by the AMS. This exciting new series incorporates the same high quality and distinguished authorship as other AMS publications at an affordable price for the graduate student. This series is useful to professors looking for graduate-level textbooks for class use and to librarians wishing to recommend suitable books to graduate students.

Volume 1

The General Topology of Dynamical Systems

Ethan Akin

- is an essential text for students studying dynamical systems and numerical analysis;
- contains straightforward proofs (guided by hints) for less experienced readers;
- has over 60 exercises and 50 supplemental exercises;
- builds a natural foundation for all aspects of dynamical systems theory, using both old and new research;
- is a valuable reference tool for students and researchers alike.
