Mathematics of Computation

This journal publishes research articles in computational mathematics. Areas covered include numerical analysis, the application of computational methods, algorithms for advanced computer architectures, computational number theory and algebra, and related fields. Table errata and reviews of books in areas related to computational mathematics are also included.

Subscription information. *Mathematics of Computation* is published quarterly. Subscription prices for Volume 64 (1995) are $274 list; $219 institutional member; $178 member of CBMS organizations; $164 individual AMS member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmember institutions and organizations after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $9; subscribers in India must pay a postage surcharge of $18. Expedited delivery to destinations in North America $13; elsewhere $40.

Back number information. For back issues see the *AMS Catalog of Publications.*

Subscriptions and orders should be addressed to the American Mathematical Society, P. O. Box 5904, Boston, MA 02206-5904. *All orders must be accompanied by payment.* Other correspondence should be addressed to P. O. Box 6248, Providence, RI 02940-6248.

Unpublished Mathematical Tables. The editorial office of the journal maintains a repository of Unpublished Mathematical Tables (UMT). When a table is deposited in the UMT repository a brief summary of its contents is published in the section *Reviews and Descriptions of Tables and Books.* Upon request, the chairman of the editorial committee will supply copies of any table for a nominal cost per page. All tables and correspondence concerning the UMT should be sent to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, IN 47907.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Assistant Director of Production, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940-6248. Requests can also be made by e-mail to `reprint-permission@math.ams.org`.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213. Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

Ithaca, NY 14853

AUTHOR INDEX TO VOLUME 64

Author	*Title*	*Page*
ABRATE, SERGE	On a method for obtaining approximate solutions to Sturm-Liouville problems	1511
ADAM, BRIGITTE	Voronoï-algorithm expansion of two families with period length going to infinity	1687
APPLEGATE, DAVID & LAGARIAS, JEFFREY C.	Density bounds for the $3x + 1$ problem. I. Tree-search method	411
APPLEGATE, DAVID & LAGARIAS, JEFFREY C.	Density bounds for the $3x + 1$ problem. II. Krasikov inequalities	427
ARBOGAST, TODD & CHEN, ZHANGXIN	On the implementation of mixed methods as nonconforming methods for second-order elliptic problems	943
ARNAULT, F.	Rabin-Miller primality test: Composite numbers which pass it	355
ASHWIN, PETER, BÖHMER, KLAUS & ZHEN, MEI	A numerical Liapunov-Schmidt method with applications to Hopf bifurcation on a square	649
BABUŠKA, IVO	*See*: SURI, MANIL, BABUŠKA, IVO & SCHWAB, CHRISTOPH	461
BALES, L. & LASIECKA, I.	Negative norm estimates for fully discrete finite element approximations to the wave equation with nonhomogeneous L_2 Dirichlet boundary data	89
BIESTER, CHRISTIAN, GRABNER, PETER J., LARCHER, GERHARD & TICHY, ROBERT F.	Adaptive search in quasi-Monte-Carlo optimization	807
BÖHMER, KLAUS	*See*: ASHWIN, PETER, BÖHMER, KLAUS & ZHEN, MEI	649
BRAMBLE, JAMES H.	Interpolation between Sobolev spaces in Lipschitz domains with an application to multigrid theory	1359
BUHMANN, M. D.	Multiquadric prewavelets on nonequally spaced knots in one dimension	1611
BUTCHER, J. C., CASH, J. R., MOORE, G. & RUSSELL, R. D.	Defect correction for two-point boundary value problems on nonequidistant meshes	629
CALDWELL, CHRIS K.	On the primality of $n! \pm 1$ and $2 \cdot 3 \cdot 5 \cdots p \pm 1$	889
CARSTENSEN, CARSTEN & STEPHAN, ERNST P.	A posteriori error estimates for boundary element methods	483
CASH, J. R.	*See*: BUTCHER, J. C., CASH, J. R., MOORE, G. & RUSSELL, R. D.	629
CAYCO, MARIA, FOSTER, LESLIE & SWANN, HOWARD	On the convergence rate of the cell discretization algorithm for solving elliptic problems	1397
CHAN, TONY F. & VASSILEVSKI, PANAYOT S.	A framework for block ILU factorizations using block-size reduction	129
CHANG, QIANSHUN, GUO, BOLING & JIANG, HONG	Finite difference method for generalized Zakharov equations	537
CHEN, ZHANGXIN	*See*: ARBOGAST, TODD & CHEN, ZHANGXIN	943
CHIEN, DAVID	Numerical evaluation of surface integrals in three dimensions	727

AUTHOR INDEX

Author	*Title*	*Page*
COHEN, GRAEME L., GRETTON, STEPHEN F. & HAGIS, PETER, JR.	Multiamicable numbers	1743
COHN, HARVEY	Half-step modular equations	1267
COLEMAN, JOHN P. & MYERS, NICK J.	The Faber polynomials for annular sectors	181
CORRIAS, L., FALCONE, M. & NATALINI, R.	Numerical schemes for conservation laws via Hamilton-Jacobi equations	555
COWSAR, LAWRENCE C., MANDEL, JAN & WHEELER, MARY F.	Balancing domain decomposition for mixed finite elements	989
CRANDALL, R., DOENIAS, J., NORRIE, C. & YOUNG, J.	The twenty-second Fermat number is composite	863
CREMONA, J. E.	Computing the degree of the modular parametrization of a modular elliptic curve	1235
CUNHA, CRISTINA & VILOCHE, FERMIN	An iterative method for the numerical inversion of Laplace transforms	1193
CVIJOVIĆ, DJURDJE & KLINOWSKI, JACEK	Closed-form summation of some trigonometric series	205
DARI, ENZO, DURÁN, RICARDO & PADRA, CLAUDIO	Error estimators for nonconforming finite element approximations of the Stokes problem	1017
DEMETRIOU, I. C.	Discrete piecewise monotonic approximation by a strictly convex distance function	157
DIAZ Y DIAZ, F. & OLIVIER, M.	Imprimitive ninth-degree number fields with small discriminants	305
DILCHER, KARL & SKULA, LADISLAV	A new criterion for the first case of Fermat's last theorem	363
DOENIAS, J.	*See*: CRANDALL, R., DOENIAS, J., NORRIE, C. & YOUNG, J.	863
DUBNER, HARVEY & KELLER, WILFRID	Factors of generalized Fermat numbers	397
DURÁN, RICARDO	*See*: DARI, ENZO, DURÁN, RICARDO & PADRA, CLAUDIO	1017
ECKHOFF, KNUT S.	Accurate reconstructions of functions of finite regularity from truncated Fourier series expansions	671
EDELMAN, ALAN & MURAKAMI, H.	Polynomial roots from companion matrix eigenvalues	763
ELLIOTT, CHARLES M. & LARSSON, STIG	A finite element model for the time-dependent Joule heating problem	1433
FALCONE, M.	*See*: CORRIAS, L., FALCONE, M. & NATALINI, R.	555
FAROUKI, R. T. & NEFF, C. A.	Hermite interpolation by Pythagorean hodograph quintics	1589
FOSTER, LESLIE	*See*: CAYCO, MARIA, FOSTER, LESLIE & SWANN, HOWARD	1397
FRANCO, ZACHARY & POMERANCE, CARL	On a conjecture of Crandall concerning the $qx+1$ problem	1333
FRIEDMAN, EDUARDO & SANDS, JONATHAN W.	On the l-adic Iwasawa λ-invariant in a p-extension (with an appendix by Lawrence C. Washington)	1659
GAO, SHUHONG & VANSTONE, SCOTT A.	On orders of optimal normal basis generators	1227

AUTHOR INDEX

Author	*Title*	*Page*
GIRAULT, V.	A local projection operator for quadrilateral finite elements	1421
GOHBERG, I., KAILATH, T. & OLSHEVSKY, V.	Fast Gaussian elimination with partial pivoting for matrices with displacement structure	1557
GOSTIN, GARY B.	New factors of Fermat numbers	393
GÖTTFERT, RAINER	*See*: NIEDERREITER, HARALD & GÖTTFERT, RAINER	347
GOTTLIEB, DAVID & SHU, CHI-WANG	On the Gibbs phenomenon IV: recovering exponential accuracy in a subinterval from a Gegenbauer partial sum of a piecewise analytic function	1081
GRABNER, PETER J.	*See*: BIESTER, CHRISTIAN, GRABNER, PETER J., LARCHER, GERHARD & TICHY, ROBERT F.	807
GRANTHAM, JON	The largest prime dividing the maximal order of an element of S_n	407
GRETTON, STEPHEN F.	*See*: COHEN, GRAEME L., GRETTON, STEPHEN F. & HAGIS, PETER, JR.	1743
GROZEV, GEORGI R. & RAHMAN, QAZI I.	A quadrature formula with zeros of Bessel functions as nodes	715
GUO, BEN-YU	A spectral method for the vorticity equation on the surface	1067
GUO, BOLING	*See*: CHANG, QIANSHUN, GUO, BOLING & JIANG, HONG	537
HAGIS, PETER, JR.	*See*: COHEN, GRAEME L., GRETTON, STEPHEN F. & HAGIS, PETER, JR.	1743
HAN, WEIMIN & JENSEN, SØREN	On the sharpness of L^2-error estimates of H_0^1-projections onto subspaces of piecewise, high-order polynomials	51
HASEGAWA, TAKEMITSU & TORII, TATSUO	An algorithm for nondominant solutions of linear second-order inhomogeneous difference equations	1199
HASSARD, BRIAN	*See*: SHI, ZHIXIN & HASSARD, BRIAN	515
VAN DEN HIJLIGENBERG, NICO, KOTCHETKOV, YOURI & POST, GERHARD	Deformations of vector fields and Hamiltonian vector fields on the plane	1215
HILL, ADRIAN T. & SÜLI, ENDRE	Upper semicontinuity of attractors for linear multistep methods approximating sectorial evolution equations	1097
HUBER, BIRKETT & STURMFELS, BERND	A polyhedral method for solving sparse polynomial systems	1541
HUCKLE, THOMAS	Low-rank modification of the unsymmetric Lanczos algorithm	1577
ISHIKAWA, TSUNEO	On the number of zeros of diagonal forms	841
IYANAGA, KENICHI	A recursive method to calculate the number of solutions of quadratic equations over finite fields	1319
JAKUBEC, STANISLAV, MARKO, FRANTIŠEK & SZYMICZEK, KAZIMIERZ	Parity of class numbers and Witt equivalence of quartic fields	1711
JENSEN, SØREN	*See*: HAN, WEIMIN & JENSEN, SØREN	51
JHA, VIJAY	Faster computation of the first factor of the class number of $\mathbb{Q}(\zeta_p)$	1705

Author	Review Number	Title	Page
11-XX Number theory			
11-02 *Research exposition*			
POHST, MICHAEL E.	33	Computational Algebraic Number Theory	1763
11-04 *Explicit machine computation and programs*			
GRAY, JOHN	18	Mastering Mathematica: Programming Methods and Applications	903
11Y40 *Algebraic number theory computations*			
POHST, MICHAEL E.	33	Computational Algebraic Number Theory	1763
12-XX Field theory and polynomials			
12-04 *Explicit machine computation and programs*			
GRAY, JOHN	18	Mastering Mathematica: Programming Methods and Applications	903
13-XX Commutative rings and algebras			
13-04 *Explicit machine computation and programs*			
GRAY, JOHN	18	Mastering Mathematica: Programming Methods and Applications	903
13-06 *Proceedings, conferences, collections, etc.*			
EISENBUD, DAVID & ROBBIANO, LORENZO (EDITORS)	19	Computational Algebraic Geometry and Commutative Algebra	904
13P10 *Polynomial ideals, Gröbner bases*			
EISENBUD, DAVID & ROBBIANO, LORENZO (EDITORS)	19	Computational Algebraic Geometry and Commutative Algebra	904
14-XX Algebraic geometry			
14-04 *Explicit machine computation and programs*			
GRAY, JOHN	18	Mastering Mathematica: Programming Methods and Applications	903
14-06 *Proceedings, conferences, collections, etc.*			
EISENBUD, DAVID & ROBBIANO, LORENZO (EDITORS)	19	Computational Algebraic Geometry and Commutative Algebra	904
14Qxx *Computational aspects in algebraic geometry*			
EISENBUD, DAVID & ROBBIANO, LORENZO (EDITORS)	19	Computational Algebraic Geometry and Commutative Algebra	904
28-XX Measure and integration			
28-00 *General reference works*			
ZWILLINGER, DANIEL	14	Handbook of Integration	899
30-XX Functions of a complex variable			
30-04 *Explicit machine computation and programs*			
GRAY, JOHN	18	Mastering Mathematica: Programming Methods and Applications	903
30B70 *Continued fractions*			
COOPER, S. CLEMENT & THRON, W. J. (EDITORS)	27	Continued Fractions and Orthogonal Functions: Theory and Applications	1352
30E05 *Moment problems, interpolation problems*			
COOPER, S. CLEMENT & THRON, W. J. (EDITORS)	27	Continued Fractions and Orthogonal Functions: Theory and Applications	1352

INDEX OF REVIEWS BY SUBJECT OF WORK REVIEWED

Author	Review Number	Title	Page
31–XX Potential theory			
31B30 *Biharmonic and polyharmonic equations and functions*			
SOBOLEV, S. L.	32	Cubature Formulas and Modern Analysis: An Introduction	1761
33–XX Special functions			
33–00 *General reference works*			
GRADSHTEYN, I. S. & RYZHIK, I. M.	1	Table of Integrals, Series, and Products	439
33–04 *Explicit machine computation and programs*			
GRAY, JOHN	18	Mastering Mathematica: Programming Methods and Applications	903
33B15 *Gamma, beta and polygamma functions*			
COOPER, S. CLEMENT & THRON, W. J. (EDITORS)	27	Continued Fractions and Orthogonal Functions: Theory and Applications	1352
34–XX Ordinary differential equations			
34B24 *Sturm-Liouville theory*			
PRYCE, JOHN D.	10	Numerical Solution of Sturm-Liouville Problems	892
34C35 *Dynamical systems*			
SANZ-SERNA, J. M. & CALVO, M. P.	25	Numerical Hamiltonian Problems	1346
35–XX Partial differential equations			
35J99 *None of the above, but in this section*			
SOBOLEV, S. L.	32	Cubature Formulas and Modern Analysis: An Introduction	1761
40–XX Sequences, series, summability			
40A15 *Convergence and divergence of continued fractions*			
COOPER, S. CLEMENT & THRON, W. J. (EDITORS)	27	Continued Fractions and Orthogonal Functions: Theory and Applications	1354
41–XX Approximations and expansions			
41A55 *Approximate quadratures*			
BRASS, H. & HÄMMERLIN, G. (EDITORS)	16	Numerical Integration IV	901
42–XX Fourier analysis			
42C05 *Orthogonal functions and polynomials, general theory*			
COOPER, S. CLEMENT & THRON, W. J. (EDITORS)	27	Continued Fractions and Orthogonal Functions: Theory and Applications	1352
42C15 *Series of general orthogonal functions, generalized Fourier expansions, nonorthogonal expansions*			
SCHUMAKER, LARRY L. & WEBB, GLENN (EDITORS)	13	Recent Advances in Wavelet Analysis	898
43–XX Abstract harmonic analysis			
43–06 *Proceedings, conferences, collections, etc.*			
SCHUMAKER, LARRY L. & WEBB, GLENN (EDITORS)	13	Recent Advances in Wavelet Analysis	898
43A32 *Other transforms and operators of Fourier type*			
SCHUMAKER, LARRY L. & WEBB, GLENN (EDITORS)	13	Recent Advances in Wavelet Analysis	898
43A70 *Analysis on specific locally compact abelian groups*			
SCHUMAKER, LARRY L. & WEBB, GLENN (EDITORS)	13	Recent Advances in Wavelet Analysis	898

INDEX OF REVIEWS BY SUBJECT OF WORK REVIEWED

Author	Review Number	Title	Page
44–XX Integral transforms, operational calculus			
44–00 *General reference works*			
GRADSHTEYN, I. S. & RYZHIK, I. M.	1	Table of Integrals, Series, and Products	439
46–XX Functional analysis			
46N20 *Applications to differential and integral equations*			
PETRYSHYN, WOLODYMYR V.	3	Approximation-Solvability of Nonlinear Functional and Differential Equations	443
46N40 *Applications in numerical analysis*			
PETRYSHYN, WOLODYMYR V.	3	Approximation-Solvability of Nonlinear Functional and Differential Equations	443
SOBOLEV, S. L.	32	Cubature Formulas and Modern Analysis: An Introduction	1761
47–XX Operator theory			
47–02 *Research exposition*			
PETRYSHYN, WOLODYMYR V.	3	Approximation-Solvability of Nonlinear Functional and Differential Equations	443
47H05 *Monotone operators*			
PETRYSHYN, WOLODYMYR V.	3	Approximation-Solvability of Nonlinear Functional and Differential Equations	443
47H15 *Equations involving nonlinear operator*			
PETRYSHYN, WOLODYMYR V.	3	Approximation-Solvability of Nonlinear Functional and Differential Equations	443
47H17 *Methods for solving equations involving nonlinear operators*			
PETRYSHYN, WOLODYMYR V.	3	Approximation-Solvability of Nonlinear Functional and Differential Equations	443
49–XX Calculus of variations and optimal control; optimization			
49–02 *Research exposition*			
BULIRSCH, R. & KRAFT, D. (EDITORS)	30	Computational Optimal Control	1758
49M15 *Methods of Newton-Raphson, Galerkin and Ritz types*			
BULIRSCH, R. & KRAFT, D. (EDITORS)	30	Computational Optimal Control	1758
49N99 *None of the above, but in this section*			
BULIRSCH, R. & KRAFT, D. (EDITORS)	30	Computational Optimal Control	1758
58–XX Global analysis, analysis on manifolds			
58F05 *Hamiltonian and Lagrangian systems; symplectic geometry*			
SANZ-SERNA, J. M. & CALVO, M. P.	25	Numerical Hamiltonian Problems	1346
60–XX Probability theory and stochastic processes			
60–02 *Research exposition*			
BOULEAU, NICOLAS & LÉPINGLE, DOMINIQUE	17	Numerical Methods for Stochastic Processes	903
EGOROV, A. D., SOBOLEVSKY, P. I. & YANOVICH, L. A.	2	Functional Integrals: Approximate Evaluation and Applications	441
60G07 *General theory of processes*			
BOULEAU, NICOLAS & LÉPINGLE, DOMINIQUE	17	Numerical Methods for Stochastic Processes	903
60H05 *Stochastic integrals*			
EGOROV, A. D., SOBOLEVSKY, P. I. & YANOVICH, L. A.	2	Functional Integrals: Approximate Evaluation and Applications	441

Mathematics of Computation

This journal publishes research articles in computational mathematics. Areas covered include numerical analysis, the application of computational methods, algorithms for advanced computer architectures, computational number theory and algebra, and related fields. Table errata and reviews of books in areas related to computational mathematics are also included.

Subscription information. *Mathematics of Computation* is published quarterly. Subscription prices for Volume 64 (1995) are $274 list; $219 institutional member; $178 member of CBMS organizations; $164 individual AMS member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmember institutions and organizations after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $9; subscribers in India must pay a postage surcharge of $18. Expedited delivery to destinations in North America $13; elsewhere $40.

Back number information. For back issues see the *AMS Catalog of Publications.*

Subscriptions and orders should be addressed to the American Mathematical Society, P. O. Box 5904, Boston, MA 02206-5904. *All orders must be accompanied by payment.* Other correspondence should be addressed to P. O. Box 6248, Providence, RI 02940-6248.

Unpublished Mathematical Tables. The editorial office of the journal maintains a repository of Unpublished Mathematical Tables (UMT). When a table is deposited in the UMT repository a brief summary of its contents is published in the section *Reviews and Descriptions of Tables and Books.* Upon request, the chairman of the editorial committee will supply copies of any table for a nominal cost per page. All tables and correspondence concerning the UMT should be sent to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, IN 47907.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Assistant Director of Production, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940-6248. Requests can also be made by e-mail to `reprint-permission@math.ams.org`.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213. Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

MATHEMATICS OF COMPUTATION
CONTENTS

Vol. 64, No. 209 **January 1995**

Ricardo H. Nochetto, Pointwise a posteriori error estimates for elliptic problems on highly graded meshes 1
Shangyou Zhang, Optimal-order nonnested multigrid methods for solving finite element equations III: On degenerate meshes 23
Weimin Han and Søren Jensen, On the sharpness of L^2-error estimates of H_0^1-projections onto subspaces of piecewise, high-order polynomials 51
Lixin Wu, The semigroup stability of the difference approximations for initial-boundary value problems 71
L. Bales and I. Lasiecka, Negative norm estimates for fully discrete finite element approximations to the wave equation with nonhomogeneous L_2 Dirichlet boundary data 89
R. A. Nicolaides and Noel J. Walkington, Strong convergence of numerical solutions to degenerate variational problems 117
Tony F. Chan and Panayot S. Vassilevski, A framework for block ILU factorizations using block-size reduction 129
I. C. Demetriou, Discrete piecewise monotonic approximation by a strictly convex distance function 157
John P. Coleman and Nick J. Myers, The Faber polynomials for annular sectors 181
Djurdje Cvijović and Jacek Klinowski, Closed-form summation of some trigonometric series 205
Frank Stenger, Collocating convolutions 211
G. Mastroianni and G. Monegato, Convergence of product integration rules over $(0, \infty)$ for functions with weak singularities at the origin 237
Arno Kuijlaars, Chebyshev-type quadrature and partial sums of the exponential series 251
Abraham Ziv, Converting approximate error bounds into exact ones 265
Harald Niederreiter, Pseudorandom vector generation by the multiple-recursive matrix method 279
Georges Rhin and Christopher Smyth, On the absolute Mahler measure of polynomials having all zeros in a sector 295
F. Diaz y Diaz and M. Olivier, Imprimitive ninth-degree number fields with small discriminants 305
Stéphane Louboutin, Determination of all nonquadratic imaginary cyclic number fields of 2-power degrees with ideal class groups of exponents ≤ 2 323
Irving Kaplansky, The first nontrivial genus of positive definite ternary forms 341
Harald Niederreiter and Rainer Göttfert, On a new factorization algorithm for polynomials over finite fields 347
F. Arnault, Rabin-Miller primality test: Composite numbers which pass it 355
Karl Dilcher and Ladislav Skula, A new criterion for the first case of Fermat's last theorem 363
Gary B. Gostin, New factors of Fermat numbers 393

Harvey Dubner and Wilfrid Keller, Factors of generalized Fermat numbers 397
Jon Grantham, The largest prime dividing the maximal order of an element of S_n 407
David Applegate and Jeffrey C. Lagarias, Density bounds for the $3x + 1$ problem. I. Tree-search method 411
David Applegate and Jeffrey C. Lagarias, Density bounds for the $3x + 1$ problem. II. Krasikov inequalities 427

Editorial Information

As of June 30, 1995, the backlog for this journal was approximately 1 issue. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months, reduced by the number of issues published in six months (the time necessary for editing and composing a typical issue).

A Copyright Transfer Agreement is required before a paper will be published in this journal. By submitting a paper to this journal, authors certify that the manuscript has not been submitted to nor is it under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors and Editors

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The *abstract* must be brief and reasonably self-contained. Included with the footnotes to the paper, there should be the 1991 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. This may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual index of *Mathematical Reviews*, published with the December issue starting in 1990, as well as from the electronic service e-MATH [**telnet e-MATH.ams.com** (or **telnet 130.44.1.100**). Login and password are **e-math**]. For journal abbreviations used in bibliographies, see the list of serials in the latest *Mathematical Reviews* annual index. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

TEX files available upon request. Authors may request a copy of the TEX files of their papers by sending e-mail to `file-request@math.ams.org` or by contacting the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The TEX file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet e-mail, please include the e-mail address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because TEX production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, TEX files cannot be guaranteed to run through the author's version of TEX without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's TEX environment.

Electronically Prepared Manuscripts. The AMS encourages submission of electronically prepared manuscripts in $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX or $\mathcal{A}\mathcal{M}\mathcal{S}$-LATEX because properly prepared electronic manuscripts save the author proofreading time and move more quickly through the production process. To this end, the Society has prepared author packages for each AMS publication. Author packages include

instructions for preparing electronic manuscripts, the *AMS Author Handbook*, samples, and a style file that generates the particular design specifications of that publication series for both $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX and $\mathcal{A}\mathcal{M}\mathcal{S}$-LATEX.

Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Electronically submitted manuscripts prepared in plain TEX or LATEX are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production system. Users of plain TEX should have little difficulty learning $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX, and LATEX users will find that $\mathcal{A}\mathcal{M}\mathcal{S}$-LATEX is the same as LATEX with additional commands to simplify the typesetting of mathematics.

Authors with FTP access may retrieve an author package from the Society's Internet node `e-MATH.ams.org` (130.44.1.100). For those without FTP access, the author package can be obtained free of charge by sending e-mail to `pub@math.ams.org` (Internet) or from the Publication Division, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When requesting an author package, please specify $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX or $\mathcal{A}\mathcal{M}\mathcal{S}$-LATEX, Macintosh or IBM (3.5) format, and the publication in which your paper will appear. Please be sure to include your complete mailing address.

At the time of submission, authors should indicate if the paper has been prepared using $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX or $\mathcal{A}\mathcal{M}\mathcal{S}$-LATEX and provide the Editor with a paper manuscript that matches the electronic manuscript. The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper manuscript to the Editor, who will forward a copy to the Providence office. Editors will require authors to send their electronically prepared manuscripts to the Providence office in a timely fashion. Electronically prepared manuscripts can be sent via e-mail to `pub-submit@math.ams.org` (Internet) or on diskette to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When submitting an electronic manuscript, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to submit files are included in the author package.

Electronic graphics. Figures may be submitted to the AMS in an electronic format. The AMS recommends that graphics created electronically be saved in Encapsulated PostScript (EPS) format. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images.

If the graphics package used does not support EPS output, the graphics file should be saved in one of the standard graphics formats—such as TIFF, PICT, GIF, etc.—rather than in an application-dependent format. Graphics files submitted in an application-dependent format are not likely to be used. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a "hairline" for a very thin line. Hairlines often

look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly.

An author should submit the original and two copies of the manuscript and retain one copy. The author may suggest an appropriate editor for his paper. All contributions intended for publication and all books for review should be addressed to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, Indiana 47907. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Chairman of the Editorial Committee, and it is the responsibility of the author to submit manuscripts directly to this office.

Any inquiries concerning a paper that has been accepted for publication should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

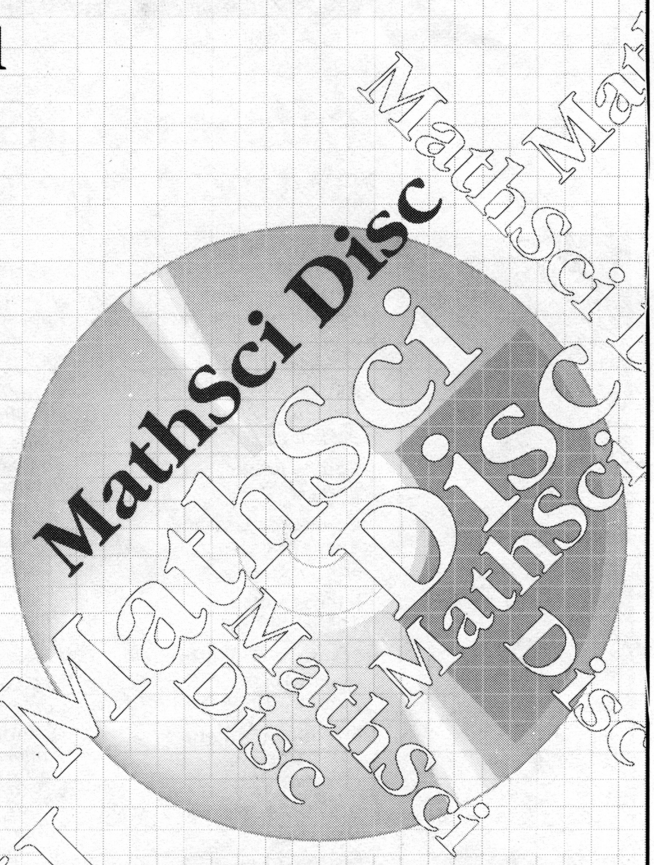
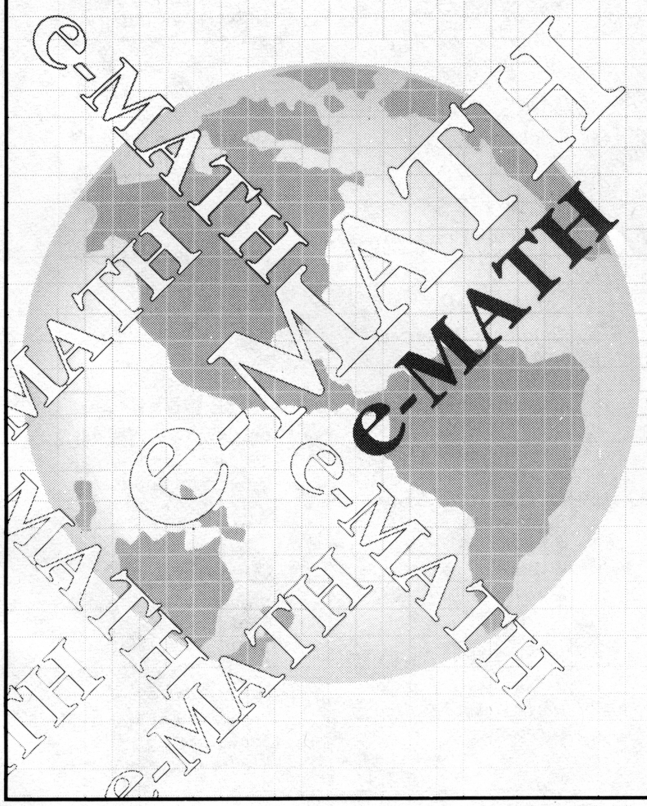
ELECTRONIC PRODUCTS & SERVICES



MathSci Disc is the CD-ROM version of *Mathematical Reviews* (*MR*) and *Current Mathematical Publications* (*CMP*), the abstracting, reviewing, and indexing publications of the AMS.

- Covers 1940–present and is updated twice each year.
- Performs complex searches using SilverPlatter's Information Retrieval Software (SPIRS).
- Is available for use on DOS, Windows, and Macintosh platforms.
- Can be networked to allow simultaneous access.



e-MATH provides electronic delivery of AMS Products and Services. Now on the World Wide Web.

- **Electronic Journals:** *Notices of the AMS, Bulletin of the AMS, Electronic Research Announcements of the AMS.*
- **Preprint Server**
- **Mathematics Calendar**
- **Combined Membership List**
- **Many other services and products**

Vijay Jha, Faster computation of the first factor of the class number of $\mathbb{Q}(\zeta_p)$ 1705
Stanislav Jakubec, František Marko, and Kazimierz Szymiczek, Parity of class numbers and Witt equivalence of quartic fields 1711
Daniel Shanks and Samuel S. Wagstaff, Jr., 48 more solutions of Martin Davis's quaternary quartic equation 1717
Wilfrid Keller, New Cullen primes 1733
Graeme L. Cohen, Stephen F. Gretton, and Peter Hagis, Jr., Multiamicable numbers 1743
Stan Wagon, Quintuples with square triplets 1755
Reviews and Descriptions of Tables and Books 1757
Euvrard **29**, Bulirsch and Kraft, Editors **30**, Hackbusch **31**, Sobolev **32**, Pohst **33**
Supplement to "New Cullen primes" by **Wilfrid Keller and Wolfgang Niebuhr** S39

No microfiche supplement in this issue

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 64, No. 212 **October 1995**

James H. Bramble, Interpolation between Sobolev spaces in Lipschitz domains with an application to multigrid theory 1359
Patrick Le Tallec and Taoufik Sassi, Domain decomposition with nonmatching grids: Augmented Lagrangian approach 1367
Maria Cayco, Leslie Foster, and Howard Swann, On the convergence rate of the cell discretization algorithm for solving elliptic problems ... 1397
V. Girault, A local projection operator for quadrilateral finite elements . 1421
Charles M. Elliott and Stig Larsson, A finite element model for the time-dependent Joule heating problem 1433
P. Neittaanmäki, V. Rivkind, and G. Seregin, A dual finite element approach for stresses of elasto-perfectly plastic bodies 1455
Zhi-zhong Sun, A second-order accurate linearized difference scheme for the two-dimensional Cahn-Hilliard equation 1463
Pelle Olsson, Summation by parts, projections, and stability. II 1473
Daoqi Yang, Grid modification for second-order hyperbolic problems ... 1495
Serge Abrate, On a method for obtaining approximate solutions to Sturm-Liouville problems 1511
Erich Novak, Klaus Ritter, and Henryk Woźniakowski, Average-case optimality of a hybrid secant-bisection method 1517
Birkett Huber and Bernd Sturmfels, A polyhedral method for solving sparse polynomial systems 1541
I. Gohberg, T. Kailath, and V. Olshevsky, Fast Gaussian elimination with partial pivoting for matrices with displacement structure 1557
Thomas Huckle, Low-rank modification of the unsymmetric Lanczos algorithm 1577
R. T. Farouki and C. A. Neff, Hermite interpolation by Pythagorean hodograph quintics 1589
M. D. Buhmann, Multiquadric prewavelets on nonequally spaced knots in one dimension 1611
Avram Sidi, Convergence analysis for a generalized Richardson extrapolation process with an application to the $d^{(1)}$-transformation on convergent and divergent logarithmic sequences 1627
Eduardo Friedman and Jonathan W. Sands (with an appendix by Lawrence C. Washington), On the l-adic Iwasawa λ-invariant in a p-extension 1659
Ming-yao Zhang, On Yokoi's conjecture 1675
Brigitte Adam, Voronoï-algorithm expansion of two families with period length going to infinity 1687
