Mathematics of Computation

This journal publishes research articles in computational mathematics. Areas covered include numerical analysis, with emphasis on the mathematical analysis and development of methods, computational number theory and algebra, and related fields. Table errata and reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from e-MATH via the World Wide Web at the URL <http://www.ams.org/publications/>. Subscription prices for Volume 67 (1998) are as follows: for paper delivery, \$322 list, \$258 institutional member, \$290 corporate member, \$209 member of CBMS organizations; \$193 individual member; for electronic delivery, \$290 list, \$232 institutional member, \$261 corporate member, \$189 member of CBMS organizations, \$174 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$12 for surface delivery outside the United States and India; \$18 to India. Expedited delivery to destinations in North America is \$17; elsewhere \$52.

Back number information. For back issues see the *AMS Catalog of Publications*.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 5904, Boston, MA 02206-5904. *All orders must be accompanied by payment.* Other correspondence should be addressed to P.O. Box 6248, Providence, RI 02940-6248.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Assistant to the Publisher, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

This journal is indexed in *Science Citation Index®*, *SciSearch®*, *Research Alert®*, *CompuMath Citation Index®*, and *Current Contents®/Physical, Chemical & Earth Sciences*.

⊗ The paper used in this book is acid-free and falls within the guidelines established to ensure permanence and durability.

INDEX TO VOLUME 67 (1998)

- Agoh, Takashi, Dilcher, Karl, and Skula, Ladislav. *Wilson quotients for composite moduli*, 843
Akrivis, Georgios, Crouzeix, Michel, and Makridakis, Charalambos. *Implicit-explicit multistep finite element methods for nonlinear parabolic problems*, 457
Alam, Rafikul, Kulkarni, Rekha P., and Limaye, Balmohan V. *Accelerated spectral approximation*, 1401
Ames, Karen A., Clark, Gordon W., Epperson, James F., and Oppenheimer, Seth F. *A comparison of regularizations for an ill-posed problem*, 1451
Beaucoupe, Franck, Borwein, Peter, Boyd, David W., and Pinner, Christopher. *Power series with restricted coefficients and a root on a given ray*, 715
Ben Ghanem, Riadh. *Quadrature formulae using zeros of Bessel functions as nodes*, 323
Bennett, Michael A., and de Weger, Benjamin M. M. *On the diophantine equation $|ax^n - by^n| = 1$* , 413
Bermúdez, Alfredo, Durán, Ricardo, and Rodríguez, Rodolfo. *Finite element analysis of compressible and incompressible fluid-solid systems*, 111
Bernstein, Daniel J. *Detecting perfect powers in essentially linear time*, 1253
Björn, Anders, and Riesel, Hans. *Factors of generalized Fermat numbers*, 441
Blecksmith, Richard, Brillhart, John, and Gerst, Irving. *A constructive theory of triple and quintuple product identities of the second degree*, 797
Borwein, Peter. *See Beaucoupe, Franck*
Boyd, David W. *See Beaucoupe, Franck*
Bramble, James H., Pasciak, Joseph E., and Vassilev, Apostol T. *Analysis of non-overlapping domain decomposition algorithms with inexact solves*, 1
Bramble, James H., and Sun, Tong. *A negative-norm least squares method for Reissner-Mindlin plates*, 901
Brillhart, John. *See Blecksmith, Richard*
Butcher, J. C., and Chan, R. P. K. *Efficient Runge-Kutta integrators for index-2 differential algebraic equations*, 1001
Carmack, Lori A. *Numerical evaluation of a symmetric potential function*, 641
Castel, M. Jesús, Migallón, Violeta, and Penadés, José. *Convergence of non-stationary parallel multisplitting methods for hermitian positive definite matrices*, 209
Ceniceros, Héctor D., and Hou, Thomas Y. *Convergence of a non-stiff boundary integral method for interfacial flows with surface tension*, 137
Chan, R. P. K. *See Butcher, J. C.*
Charnes, C., and Dempwolff, U. *The translation planes of order 49 and their automorphism groups*, 1207
Chen, X., Qi, L., and Sun, D. *Global and superlinear convergence of the smoothing Newton method and its application to general box constrained variational inequalities*, 519
Chen, Zhangxin, and Oswald, Peter. *Multigrid and multilevel methods for nonconforming Q_1 elements*, 667
Clark, Gordon W. *See Ames, Karen A.*
Cohen, Graeme L., and te Riele, Herman J. J. *On ϕ -amicable pairs*, 399
Cohen, Graeme L. *See Hagis, Peter, Jr.*
Cohen, H., Diaz y Diaz, F., and Olivier, M. *Computing ray class groups, conductors and discriminants*, 773
Cohn, J. H. E. *A conjecture of Erdős on 3-powerful numbers*, 439
Crandall, Richard E. *Fast evaluation of multiple zeta sums*, 1163
Crouzeix, Michel. *See Akrivis, Georgios*
Deléglise, Marc, and Rivat, Joël. *Computing $\psi(x)$* , 1691
Dempwolff, U. *See Charnes, C.*
Deo, Satya, and Mazumdar, Lipika. *An algorithm for constructing a basis for C^r -spline modules over polynomial rings*, 1107
Dewaghe, L. *Remarks on the Schoof-Elkies-Atkin algorithm*, 1247
Diaz y Diaz, F. *See Cohen, H.*
Dilcher, Karl. *See Agoh, Takashi*
Dörfler, W., and Rumpf, M. *An adaptive strategy for elliptic problems including a posteriori controlled boundary approximation*, 1361
Dresden, Gregory P. *Orbits of algebraic numbers with low heights*, 815

INDEX TO VOLUME 67 (1998)

- Du, Qiang. *Discrete gauge invariant approximations of a time dependent Ginzburg-Landau model of superconductivity*, 965
- Durán, Ricardo. *See* Bermúdez, Alfredo
- Eckhoff, Knut S. *On a high order numerical method for functions with singularities*, 1063
- Ekl, Randy L. *New results in equal sums of like powers*, 1309
- El Baz, D. *See* Miellou, J. C.
- Epperson, James F. *See* Ames, Karen A.
- Fan, Haitao. *Existence and uniqueness of traveling waves and error estimates for Godunov schemes of conservation laws*, 87
- Farrell, Paul A., Miller, John J. H., O'Riordan, Eugene, and Shishkin, Grigorii I. *On the non-existence of ε -uniform finite difference methods on uniform meshes for semilinear two-point boundary value problems*, 603
- Flyer, Natasha. *Asymptotic upper bounds for the coefficients in the Chebyshev series expansion for a general order integral of a function*, 1601
- Gao, Shuhong, von zur Gathen, Joachim, and Panario, Daniel. *Gauss periods: orders and cryptographical applications*, 343
- von zur Gathen, Joachim. *See* Gao, Shuhong
- Gerst, Irving. *See* Blecksmith, Richard
- Goetgheluck, P. *Infinite families of solutions of the equation $\binom{n}{k} = 2\binom{a}{b}$* , 1727
- Gottlieb, Sigal, and Shu, Chi-Wang. *Total variation diminishing Runge-Kutta schemes*, 73
- Grandcolas, Michel. *Diameters of complete sets of conjugate algebraic integers of small degree*, 821
- Grannell, M. J., Griggs, T. S., and Mathon, R. A. *Steiner systems $S(5, 6, v)$ with $v = 72$ and 84*, 357
- Greif, Chen, and Levin, David. *The d_2 -transformation for infinite double series and the D_2 -transformation for infinite double integrals*, 695
- Griggs, T. S. *See* Grannell, M. J.
- Guo, Chun-Hua, and Lancaster, Peter. *Analysis and modifacaton of Newton's method for algebraic Riccati equations*, 1089
- Guo, Xian-Zhong. *See* Hu, Ning
- Hagis, Peter, Jr., and Cohen, Graeme L. *Every odd perfect number has a prime factor which exceeds 10^6* , 1323
- Ham, Kie H., and Mullen, Gary L. *Distribution of irreducible polynomials of small degrees over finite fields*, 337
- Hemkemeier, Boris. *See* Scharlau, Rudolf
- Heuer, Norbert, Stephan, Ernst P., and Tran, Thanh. *Multilevel additive Schwarz method for the h - p version of the Galerkin boundary element method*, 501
- Hickernell, Fred J. *A generalized discrepancy and quadrature error bound*, 299
- Higham, Nicholas J. *Factorizing complex symmetric matrices with positive definite real and imaginary parts*, 1591
- Hobby, John D. *A natural lattice basis problem with applications*, 1149
- Hörmann, Wolfgang. *See* Leydold, Josef
- Hou, Thomas Y. *See* Ceniceros, Héctor D.
- Hu, Ning, Guo, Xian-Zhong, and Katz, I. Norman. *Bounds for eigenvalues and condition numbers in the p -version of the finite element method*, 1423
- Hu, Qiya. *Interpolation correction for collocation solutions of Fredholm integro-differential equations*, 987
- Hundsdorfer, Willem. *A note on stability of the Douglas splitting method*, 183
Trapezoidal and midpoint splittings for initial-boundary value problems, 1047
- Ito, Kazufumi, and Kappel, Franz. *The Trotter-Kato theorem and approximation of PDEs*, 21
- Jakubec, Stanislav. *On divisibility of the class number h^+ of the real cyclotomic fields of prime degree l* , 369
- Jia, Rong-Qing. *Approximation properties of multivariate wavelets*, 647
- Jia, Rong-Qing, Riemenschneider, S. D., and Zhou, Ding-Xuan. *Vector subdivision schemes and multiple wavelets*, 1533
- Kaltofen, Erich, and Shoup, Victor. *Subquadratic-time factoring of polynomials over finite fields*, 1179
- Kappel, Franz. *See* Ito, Kazufumi

INDEX TO VOLUME 67 (1998)

- Karakashian, Ohannes, and Makridakis, Charalambos. *A space-time finite element method for the nonlinear Schrödinger equation: the discontinuous Galerkin method*, 479
- Katz, I. Norman. *See* Hu, Ning
- Kedlaya, Kiran S. *Solving constrained Pell equations*, 833
- Kobayashi, Hidetsune, Suzuki, Hideo, and Sakai, Yoshihiko. *Numerical calculation of the multiplicity of a solution to algebraic equations*, 257
- Kulkarni, Rekha P. *See* Alam, Rafikul
- Labreuche, Christophe. *A convergence theorem for the fast multipole method for 2 dimensional scattering problems*, 553
- Lancaster, Peter. *See* Guo, Chun-Hua
- Larsson, Stig, Thomée, Vidar, and Wahlbin, Lars B. *Numerical solution of parabolic integro-differential equations by the discontinuous Galerkin method*, 45

Mathematics of Computation

This journal publishes research articles in computational mathematics. Areas covered include numerical analysis, with emphasis on the mathematical analysis and development of methods, computational number theory and algebra, and related fields. Table errata and reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from e-MATH via the World Wide Web at the URL <http://www.ams.org/publications/>. Subscription prices for Volume 67 (1998) are as follows: for paper delivery, \$322 list, \$258 institutional member, \$290 corporate member, \$209 member of CBMS organizations; \$193 individual member; for electronic delivery, \$290 list, \$232 institutional member, \$261 corporate member, \$189 member of CBMS organizations, \$174 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$12 for surface delivery outside the United States and India; \$18 to India. Expedited delivery to destinations in North America is \$17; elsewhere \$52.

Back number information. For back issues see the *AMS Catalog of Publications*.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 5904, Boston, MA 02206-5904. *All orders must be accompanied by payment.* Other correspondence should be addressed to P.O. Box 6248, Providence, RI 02940-6248.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Assistant to the Publisher, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

This journal is indexed in *Science Citation Index®*, *SciSearch®*, *Research Alert®*, *CompuMath Citation Index®*, and *Current Contents®/Physical, Chemical & Earth Sciences*.

⊗ The paper used in this book is acid-free and falls within the guidelines established to ensure permanence and durability.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 67, No. 221

January 1998

James H. Bramble, Joseph E. Pasciak, and Apostol T. Vassilev,	
Analysis of non-overlapping domain decomposition algorithms with	
inexact solves	1
Kazufumi Ito and Franz Kappel,	
The Trotter-Kato theorem and	
approximation of PDEs	21
Stig Larsson, Vidar Thomée, and Lars B. Wahlbin,	
Numerical solution	
of parabolic integro-differential equations by the discontinuous Galerkin	
method	45
Sigal Gottlieb and Chi-Wang Shu,	
Total variation diminishing Runge-	
Kutta schemes	73
Haitao Fan,	
Existence and uniqueness of traveling waves and error estimates	
for Godunov schemes of conservation laws	87
Alfredo Bermúdez, Ricardo Durán, and Rodolfo Rodríguez,	
Finite	
element analysis of compressible and incompressible fluid-solid systems	
Héctor D. Ceniceros and Thomas Y. Hou,	
Convergence of a non-stiff	
boundary integral method for interfacial flows with surface tension ...	137
Willem Hundsdorfer,	
A note on stability of the Douglas splitting method	
Amos Ron and Zuowei Shen,	
Compactly supported tight affine spline	
frames in $L_2(\mathbb{R}^d)$	191
M. Jesús Castel, Violeta Migallón, and José Penadés,	
Convergence	
of non-stationary parallel multisplitting methods for hermitian positive	
definite matrices	209
Suely Oliveira,	
A new parallel chasing algorithm for transforming arrowhead	
matrices to tridiagonal form	221
J. C. Miellou, D. El Baz, and P. Spiteri,	
A new class of asynchronous	
iterative algorithms with order intervals	237
Hidetsune Kobayashi, Hideo Suzuki, and Yoshihiko Sakai,	
Numerical	
calculation of the multiplicity of a solution to algebraic equations	257
A. Melman,	
Analysis of third-order methods for secular equations	271
Isao Shoji,	
Approximation of continuous time stochastic processes by a local	
linearization method	287
Fred J. Hickernell,	
A generalized discrepancy and quadrature error bound	
Riad Ben Ghanem,	
Quadrature formulae using zeros of Bessel functions	
as nodes	323
Kie H. Ham and Gary L. Mullen,	
Distribution of irreducible polynomials	
of small degrees over finite fields	337
Shuhong Gao, Joachim von zur Gathen, and Daniel Panario,	
Gauss	
periods: orders and cryptographical applications	343
I. A. Semaev,	
Evaluation of discrete logarithms in a group of p -torsion	
points of an elliptic curve in characteristic p	353
M. J. Grannell, T. S. Griggs, and R. A. Mathon,	
Steiner systems	
$S(5, 6, v)$ with $v = 72$ and 84	357
M. Pohst and K. Wildanger,	
Tables of unit groups and class groups of	
quintic fields and a regulator bound	361

Stanislav Jakubec, On divisibility of the class number h^+ of the real cyclotomic fields of prime degree l	369
Graeme L. Cohen and Herman J. J. te Riele, On ϕ-amicable pairs	399
Michael A. Bennett and Benjamin M. M. de Weger, On the diophantine equation $ax^n - by^n = 1$	413
J. H. E. Cohn, A conjecture of Erdős on 3-powerful numbers	439
Anders Björn and Hans Riesel, Factors of generalized Fermat numbers	441
Reviews and Descriptions of Tables and Books	447
Dormand 1, Lebedev 2, Press, Teukolsky, Vetterling and Flannery 3, Sima 4, Zhang and Jin 5, Jensen, Kuperman, Porter and Schmidt 6, Astfalk, Editor 7	
Supplement to “Steiner systems $S(5, 6, v)$ with $v = 72$ and 84” by M. J. Grannell, T. S. Griggs, and R. A. Mathon	S1
Microfiche Supplements	
Shuhong Gao, Joachim von zur Gathen, and Daniel Panario, Gauss periods: orders and cryptographical applications	
Anders Björn and Hans Riesel, Factors of generalized Fermat numbers

Gradshteyn and Ryzhik 633	
Supplement to "Polynomials with small Mahler measure" by Michael J. Mossinghoff	S11

Editorial Information

As of May 31, 1998, the backlog for this journal was approximately 1 issue. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months, reduced by the number of issues published in six months (the time necessary for editing and composing a typical issue).

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. An author should submit three paper copies of the manuscript. Initial submission by e-mail is not allowed. The author may suggest an appropriate editor for his paper. All contributions intended for publication and all books for review should be addressed to Lars B. Wahlbin, Managing Editor, Mathematics of Computation, Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall, Cornell University, Ithaca, NY 14853-3801. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Managing Editor, and it is the responsibility of the author to submit manuscripts directly to this office.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief and reasonably self-contained. Included with the footnotes to the paper, there should be the 1991 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. This may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. A list of classifications may be found in the annual index of *Mathematical Reviews*, published with the December issue starting in 1990. Journal abbreviations used in bibliographies are also listed in the latest *Mathematical Reviews* annual index. The classifications and the journal abbreviations are accessible from e-MATH via the World Wide Web through the URL <http://www.ams.org/publications/>. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

Electronically prepared manuscripts. For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for *AMS-L^AT_EX*. To this end, the Society has prepared *AMS-L^AT_EX* author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, the *AMS Author Handbook*, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the *AMS-L^AT_EX* style file automatically provide hypertext linking to the bibliography and other elements of the article for searching electronically on the World Wide Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of *T_EX*, using *AMS-L^AT_EX* also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. *AMS-L^AT_EX* papers also move more efficiently through the production stream, helping to minimize publishing costs.

AMS-L^AT_EX is the highly preferred format of *T_EX*, but author packages are also available in *AMS-T_EX*. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in *L^AT_EX* or plain *T_EX* are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production

system. L^AT_EX users will find that *\mathcal{AM} S-L^AT_EX* is the same as L^AT_EX with additional commands to simplify the typesetting of mathematics, and users of plain T_EX should have the foundation for learning *\mathcal{AM} S-L^AT_EX*.

Authors may retrieve an author package from e-MATH via the World Wide Web through the URL <http://www.ams.org/tex/> or via FTP to [ftp.ams.org](ftp://ftp.ams.org) (login as **anonymous** and enter username as password). The author package can also be obtained free of charge by sending e-mail to pub@ams.org (Internet) or from the Publication Division, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When requesting an author package, please specify *\mathcal{AM} S-L^AT_EX* or *\mathcal{AM} S-T_EX*, Macintosh or IBM (3.5) format, and the publication in which your paper will appear. Please be sure to include your complete mailing address.

The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper manuscript to the Managing Editor, who will forward a copy to the Providence office. Editors will require authors to send their electronically prepared manuscripts to the Providence office in a timely fashion. Electronically prepared manuscripts can be sent via e-mail to pub-submit@ams.org (Internet) or on diskette to the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When sending a manuscript electronically, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

Electronic graphics. Figures may be sent to the AMS in an electronic format. The AMS recommends that graphics created electronically be saved in Encapsulated PostScript (EPS) format. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images.

If the graphics package used does not support EPS output, the graphics file should be saved in one of the standard graphics formats—such as TIFF, PICT, GIF, etc.—rather than in an application-dependent format. Graphics files sent in an application-dependent format are not likely to be used. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly.

T_EX files available. Beginning with the January 1992 issue of the *Bulletin* and the January 1996 issues of *Transactions*, *Proceedings*, *Mathematics of Computation*, and the *Journal of the AMS*, T_EX files can be downloaded from e-MATH, starting from URL <http://www.ams.org/journals/>. Authors without Web access may request their files at the address given below after the article has been published. For *Bulletin* papers published in 1987 through 1991 and for *Transactions*, *Proceedings*, *Mathematics of Computation*, and the *Journal of the AMS* papers published in 1987 through 1995, T_EX files are available upon request for authors without Web access by sending e-mail to file-request@ams.org or by contacting the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The T_EX file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet e-mail, please include the e-mail address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because T_EX production at the AMS sometimes requires extra

fonts and macros that are not yet publicly available, Te_X files cannot be guaranteed to run through the author's version of Te_X without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's Te_X environment.

Any inquiries concerning a paper that has been accepted for publication should be sent directly to the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248.
