Mathematics of Computation

This journal publishes research articles in computational mathematics. Areas covered include numerical analysis, with emphasis on the mathematical analysis and development of methods, computational number theory and algebra, and related fields. Table errata and reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to e-MATH. Articles are posted individually to e-MATH before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from e-MATH via the World Wide Web at the URL <http://www.ams.org/publications/>. Subscription prices for Volume 68 (1999) are as follows: for paper delivery, \$332 list, \$266 institutional member, \$299 corporate member, \$216 member of CBMS organizations; \$199 individual member; for electronic delivery, \$299 list, \$239 institutional member, \$269 corporate member, \$194 member of CBMS organizations, \$179 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$12 for surface delivery outside the United States and India; \$18 to India. Expedited delivery to destinations in North America is \$17; elsewhere \$56.

Back number information. For back issues see the *AMS Catalog of Publications*.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 5904, Boston, MA 02206-5904. *All orders must be accompanied by payment.* Other correspondence should be addressed to P.O. Box 6248, Providence, RI 02940-6248.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Assistant to the Publisher, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

INDEX TO VOLUME 68 (1999)

- Acciaro, Vincenzo, and Klüners, Jürgen. *Computing automorphisms of abelian number fields*, 1179
- Akiyama, Shigeki, and Tanigawa, Yoshio. *Calculation of values of L-functions associated to elliptic curves*, 1201
- Alonso, Ana, and Valli, Alberto. *An optimal domain decomposition preconditioner for low-frequency time-harmonic Maxwell equations*, 607
- Anderssen, Robert S., and Hegland, Markus. *For numerical differentiation, dimensionality can be a blessing!*, 1121
- Arno, Steve. *See* Ferguson, Helaman R. P.
- Bailey, David H. *See* Ferguson, Helaman R. P.
- Baltensperger, Richard, Berrut, Jean-Paul, and Noël, Benjamin. *Exponential convergence of a linear rational interpolant between transformed Chebyshev points*, 1109
- Barrett, John W., and Blowey, James F. *Finite element approximation of the Cahn-Hilliard equation with concentration dependent mobility*, 487
- Ben Belgacem, F., and Bernardi, C. *Spectral element discretization of the Maxwell equations*, 1497
- Bendali, A., and Guillaume, Ph. *Non-reflecting boundary conditions for waveguides*, 123
- Benito, Manuel, and Varona, Juan L. *Advances in aliquot sequences*, 389
- Bernardi, C. *See* Ben Belgacem, F.
- Berrut, Jean-Paul. *See* Baltensperger, Richard
- Bertault, F., Ramaré, O., and Zimmermann, P. *On sums of seven cubes*, 1303
- Bischof, Christian. *See* Eberhard, Peter
- Blatov, I. A., and Strygin, V. V. *On best possible order of convergence estimates in the collocation method and Galerkin's method for singularly perturbed boundary value problems for systems of first-order ordinary differential equations*, 683
- Blowey, James F. *See* Barrett, John W.
- Böhmer, Klaus, Govaerts, Willy, and Janovský, Vladimír. *Numerical detection of symmetry breaking bifurcation points with nonlinear degeneracies*, 1097
- Boumenir, Amin. *Eigenvalues of periodic Sturm-Liouville problems by the Shannon-Whittaker sampling theorem*, 1057
- Brenner, Susanne C. *Convergence of nonconforming multigrid methods without full elliptic regularity*, 25
_____. *Multigrid methods for the computation of singular solutions and stress intensity factors I: Corner singularities*, 559
- Brent, Richard P. *Factorization of the tenth Fermat number*, 429
- Browkin, Jerzy, and Gangl, Herbert. *Tame and wild kernels of quadratic imaginary number fields*, 291
- Brunner, Hermann, Pedas, Arvet, and Vainikko, Gennadi. *The piecewise polynomial collocation method for nonlinear weakly singular Volterra equations*, 1079
- Buchmann, Johannes, and Eisenbrand, Friedrich. *On factor refinement in number fields*, 345
- Cafisch, Russel E., Hou, Thomas Y., and Lowengrub, John. *Almost optimal convergence of the point vortex method for vortex sheets using numerical filtering*, 1465
- Cai, Zhiqiang. *See* Hou, Thomas Y.
- Callahan, Patrick J., Hildebrand, Martin V., and Weeks, Jeffrey R. *A census of cusped hyperbolic 3-manifolds*, 321
- Chalabi, A. *Convergence of relaxation schemes for hyperbolic conservation laws with stiff source terms*, 955
- Chen, Zhongying, Micchelli, Charles A., and Xu, Yuesheng. *A construction of interpolating wavelets on invariant sets*, 1569
- Chou, So-Hsiang, and Vassilevski, Panayot S. *A general mixed covolume framework for constructing conservative schemes for elliptic problems*, 991
- Cochrane, Todd, and Dressler, Robert E. *Gaps between integers with the same prime factors*, 395
- Cohen, H., Diaz y Diaz, F., and Olivier, M. *Tables of octic fields with a quartic subfield*, 1701
- Copetti, M. I. M. *Finite element approximation to a contact problem in linear thermoelasticity*, 1013
- Coulibaly, Ibrahim, and Lécot, Christian. *A quasi-randomized Runge-Kutta method*, 651

INDEX TO VOLUME 68 (1999)

- Cremona, J. E., and Serf, P. *Computing the rank of elliptic curves over real quadratic number fields of class number 1*, 1187

Editorial Information

As of May 31, 1999, the backlog for this journal was approximately 3 issues. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months, reduced by the number of issues published in six months (the time necessary for editing and composing a typical issue).

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. An author should submit three paper copies of the manuscript. Initial submission by e-mail is not allowed. The author may suggest an appropriate editor for his paper. All contributions intended for publication and all books for review should be addressed to Lars B. Wahlbin, Managing Editor, Mathematics of Computation, Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall, Cornell University, Ithaca, NY 14853-3801. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Managing Editor, and it is the responsibility of the author to submit manuscripts directly to this office.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief and reasonably self-contained. Included with the footnotes to the paper should be the 2000 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from <http://www.ams.org/msc>. The list of classifications will also be available in print starting with the 1999 annual index of *Mathematical Reviews*. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from <http://www.ams.org/publications>. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

Electronically prepared manuscripts. For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for *AMS-L^AT_EX*. To this end, the Society has prepared *AMS-L^AT_EX* author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, the *AMS Author Handbook*, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the *AMS-L^AT_EX* style file automatically provide hypertext linking to the bibliography and other elements of the article for searching electronically on the World Wide Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of *T_EX*, using *AMS-L^AT_EX* also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. *AMS-L^AT_EX* papers also move more efficiently through the production stream, helping to minimize publishing costs.

AMS-L^AT_EX is the highly preferred format of *T_EX*, but author packages are also available in *AMS-T_EX*. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in *L^AT_EX* or plain *T_EX* are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production

system. L^AT_EX users will find that *AMS-L^AT_EX* is the same as L^AT_EX with additional commands to simplify the typesetting of mathematics, and users of plain T_EX should have the foundation for learning *AMS-L^AT_EX*.

Authors may retrieve an author package from e-MATH via the World Wide Web through the URL <http://www.ams.org/tex/> or via FTP to [ftp.ams.org](ftp://ftp.ams.org) (login as **anonymous** and enter username as password). The author package can also be obtained free of charge by sending e-mail to pub@ams.org (Internet) or from the Publication Division, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When requesting an author package, please specify *AMS-L^AT_EX* or *AMS-T_EX*, Macintosh or IBM (3.5) format, and the publication in which your paper will appear. Please be sure to include your complete mailing address.

The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper manuscript to the Managing Editor, who will forward a copy to the Providence office. Editors will require authors to send their electronically prepared manuscripts to the Providence office in a timely fashion. Electronically prepared manuscripts can be sent via e-mail to pub-submit@ams.org (Internet) or on diskette to the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When sending a manuscript electronically, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

Electronic graphics. Figures may be sent to the AMS in an electronic format. The AMS recommends that graphics created electronically be saved in Encapsulated PostScript (EPS) format. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images.

If the graphics package used does not support EPS output, the graphics file should be saved in one of the standard graphics formats—such as TIFF, PICT, GIF, etc.—rather than in an application-dependent format. Graphics files sent in an application-dependent format are not likely to be used. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly.

T_EX files available. Beginning with the January 1992 issue of the *Bulletin* and the January 1996 issues of *Transactions*, *Proceedings*, *Mathematics of Computation*, and the *Journal of the AMS*, T_EX files can be downloaded from e-MATH, starting from URL <http://www.ams.org/journals/>. Authors without Web access may request their files at the address given below after the article has been published. For *Bulletin* papers published in 1987 through 1991 and for *Transactions*, *Proceedings*, *Mathematics of Computation*, and the *Journal of the AMS* papers published in 1987 through 1995, T_EX files are available upon request for authors without Web access by sending e-mail to file-request@ams.org or by contacting the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The T_EX file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet e-mail, please include the e-mail address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because T_EX production at the AMS sometimes requires extra

fonts and macros that are not yet publicly available, Te_X files cannot be guaranteed to run through the author's version of Te_X without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's Te_X environment.

Any inquiries concerning a paper that has been accepted for publication should be sent directly to the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248.
