Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from www.ams.org/journals/. Subscription prices for Volume 74 (2005) are as follows: for paper delivery, \$453 list, \$362 institutional member, \$408 corporate member, \$294 member of CBMS organizations; \$272 individual member; for electronic delivery, \$408 list, \$326 institutional member, \$367 corporate member, \$265 member of CBMS organizations, \$245 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$15 for surface delivery outside the United States and India; \$18 to India. Expedited delivery to destinations in North America is \$17; elsewhere \$56.

Back number information. For back issues see the www.ams.org/bookstore.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to *Mathematics of Computation*, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 74, No. 252

October 2005

James H. Bramble, Tzanio V. Kolev, and Joseph E. Pasciak, The approximation of the Maxwell eigenvalue problem using a least-squares method	1575
W. Dörfler and M. Ainsworth, Reliable a posteriori error control for nonconforming finite element approximation of Stokes flow	1599
Zhimin Zhang, Superconvergence of spectral collocation and p -version methods in one dimensional problems	1621
Erik Burman and Alexandre Ern, Stabilized Galerkin approximation of convection-diffusion-reaction equations: discrete maximum principle and convergence	1637
Bernardo Cockburn and Jayadeep Gopalakrishnan, Error analysis of variable degree mixed methods for elliptic problems via hybridization	1653
Ricardo G. Durán and Ariel L. Lombardi, Error estimates on anisotropic Q_1 elements for functions in weighted Sobolev spaces	1679
Bjorn Engquist and Yen-Hsi Tsai, Heterogeneous multiscale methods for stiff ordinary differential equations	1707
C. Clavero, J. L. Gracia, and E. O’Riordan, A parameter robust numerical method for a two dimensional reaction-diffusion problem ..	1743
P. A. Farrell, E. O’Riordan, and G. I. Shishkin, A class of singularly perturbed semilinear differential equations with interior layers	1759
Chun-Hua Guo and Peter Lancaster, Algorithms for hyperbolic quadratic eigenvalue problems	1777
Bilal Chanane, Computation of the eigenvalues of Sturm-Liouville problems with parameter dependent boundary conditions using the regularized sampling method	1793
Daniela Roşca, Locally supported rational spline wavelets on a sphere ...	1803
O. Kounchev and H. Render, Polyharmonic splines on grids $\mathbb{Z} \times a\mathbb{Z}^n$ and their limits	1831
C. Díaz-Mendoza, P. González-Vera, and M. Jiménez-Paiz, Strong Stieltjes distributions and orthogonal Laurent polynomials with applications to quadratures and Padé approximation	1843
Rong-Xian Yue and Fred J. Hickernell, Strong tractability of integration using scrambled Niederreiter points	1871
J. Dick, F. Y. Kuo, F. Pillichshammer, and I. H. Sloan, Construction algorithms for polynomial lattice rules for multivariate integration ...	1895
Christophe Doche, Even moments of generalized Rudin–Shapiro polynomials	1923
W. Luh, J. Müller, S. Ponnusamy, and P. Vasundhara, Polynomial series expansions for confluent and Gaussian hypergeometric functions	1937
Michael Drmota, Bernhard Gittenberger, and Thomas Klausner, Extended admissible functions and Gaussian limiting distributions ...	1953
D. W. Farmer and S. Lemurell, Deformations of Maass forms	1967
Mark Bauer, Edlyn Teske, and Annegret Weng, Point counting on Picard curves in large characteristic	1983

Valérie Flammang and Georges Rhin, Algebraic integers whose conjugates all lie in an ellipse	2007
Johannes Buchmann and Arthur Schmidt, Computing the structure of a finite abelian group	2017
I. M. Isaacs and Dikran B. Karagueuzian, Involutions and characters of upper triangular matrix groups	2027
G. Harman, On the greatest prime factor of $p - 1$ with effective constants	2035
Pedro Berrizbeitia, Sharpening “Primes is in P” for a large family of numbers	2043
Graham Everest and Helen King, Prime powers in elliptic divisibility sequences	2061
Igor Shparlinski and Arne Winterhof, A hidden number problem in small subgroups	2073
Takao Komatsu, An algorithm of infinite sums representations and Tasoef continued fractions	2081
Reviews and Descriptions of Tables and Books	2095
Roland Glowinski 10	
Anders Björn and Hans Riesel, Table errata to “Factors of generalized Fermat numbers”	2099
Bahman Kalantari, Corrigendum to “An infinite family of bounds on zeros of analytic functions and relationship to Smale’s bound”	2101

INDEX TO VOLUME 74 (2005)

- Achdou, Yves, Bruno Franchi, and Nicoletta Tchou. *A partial differential equation connected to option pricing with stochastic volatility: regularity results and discretization*, 1291
- Agashe, Amod, and William Stein, with an Appendix by J. Cremona and B. Mazur. *Visible evidence for the Birch and Swinnerton-Dyer conjecture for modular abelian varieties of analytic rank zero*, 455
- Ahn, Jaehyun. *See Jung, Hwanyup*
- Ainsworth, M. *See Dörfler, W.*
- Awanou, Gerard, and Ming-Jun Lai. *Trivariate spline approximations of 3D Navier-Stokes equations*, 585
- Ayati, Bruce P., and Todd F. Dupont. *Convergence of a step-doubling Galerkin method for parabolic problems*, 1053
- Bae, Sunghan. *See Jung, Hwanyup*
- Basiri, Abdolali, Andreas Enge, Jean-Charles Faugère, and Nicolas Gürel. *The arithmetic of Jacobian groups of superelliptic cubics*, 389
- Bauer, Mark, Edlyn Teske, and Annegret Weng. *Point counting on Picard curves in large characteristic*, 1983
- Bebendorf, Mario. *Efficient inversion of the Galerkin matrix of general second-order elliptic operators with nonsmooth coefficients*, 1179
- Bergam, A., C. Bernardi, and Z. Mghazli. *A posteriori analysis of the finite element discretization of some parabolic equations*, 1117
- Bermúdez, Alfredo, Rodolfo Rodríguez, and Pilar Salgado. *Numerical treatment of realistic boundary conditions for the eddy current problem in an electrode via Lagrange multipliers*, 123
- Bernardi, C. *See Bergam, A.*
- Berrizbeitia, Pedro. *Sharpening “Primes is in P” for a large family of numbers*, 2043
- Björn, Anders, and Hans Riesel. *Table errata to “Factors of generalized Fermat numbers”*, 2099
- Blackburn, Simon R., Domingo Gomez-Perez, Jaime Gutierrez, and Igor E. Shparlinski. *Predicting nonlinear pseudorandom number generators*, 1471
- Börm, Steffen, and Stefan A. Sauter. *BEM with linear complexity for the classical boundary integral operators*, 1139
- Bracciali, C. F., Xin Li, and A. Sri Ranga. *Real orthogonal polynomials in frequency analysis*, 341
- Braess, Dietrich, and Pingbing Ming. *A finite element method for nearly incompressible elasticity problems*, 25
- Bramble, James H., Tzanio V. Kolev, and Joseph E. Pasciak. *The approximation of the Maxwell eigenvalue problem using a least-squares method*, 1575
- Brenner, Holger. *Computing the tight closure in dimension two*, 1495
- Brent, Richard P., Samuli Larvala, and Paul Zimmermann. *A primitive trinomial of degree 6972593*, 1001
- Browkin, Jerzy. *Tame kernels of cubic cyclic fields*, 967
- . *Erratum to “Some new kinds of pseudoprimes”*, 1573
- Buchmann, Johannes, and Arthur Schmidt. *Computing the structure of a finite abelian group*, 2017
- Burman, Erik, and Alexandre Ern. *Stabilized Galerkin approximation of convection-diffusion-reaction equations: discrete maximum principle and convergence*, 1637
- Cătinaș, Emil. *The inexact, inexact perturbed, and quasi-Newton methods are equivalent models*, 291
- Chanane, Bilal. *Computation of the eigenvalues of Sturm-Liouville problems with parameter dependent boundary conditions using the regularized sampling method*, 1793
- Chen, Hongsen. *Pointwise error estimates of the local discontinuous Galerkin method for a second order elliptic problem*, 1097
- Chen, Richard M. M. *See Jiang, Yao-Lin*
- Chen, Yong-Gao. *Five consecutive positive odd numbers, none of which can be expressed as a sum of two prime powers*, 1025
- Chua, Kok Seng. *Real zeros of Dedekind zeta functions of real quadratic fields*, 1457
- Chui, Charles K., and Qingtang Jiang. *Balanced multi-wavelets in \mathbb{R}^s* , 1323
- . *Refinable bivariate quartic C^2 -splines for multi-level data representation and surface display*, 1369

- Clavero, C., J. L. Gracia, and E. O’Riordan. *A parameter robust numerical method for a two dimensional reaction-diffusion problem*, 1743
- Cockburn, Bernardo, and Jayadeep Gopalakrishnan. *Error analysis of variable degree mixed methods for elliptic problems via hybridization*, 1653
- Cockburn, Bernardo, Guido Kanschat, and Dominik Schötzau. *A locally conservative LDG method for the incompressible Navier-Stokes equations*, 1067
- Conder, Marston, and Peter Dobcsányi. *Applications and adaptations of the low index subgroups procedure*, 485
- Connell, Chris. *A solution to certain polynomial equations with applications to nonlinear fitting*, 303
- Dąbrowska, Dorota. *Recovering signals from inner products involving prolate spheroidals in the presence of jitter*, 279
- Díaz-Mendoza, C., P. González-Vera, and M. Jiménez-Paiz. *Strong Stieltjes distributions and orthogonal Laurent polynomials with applications to quadratures and Padé approximation*, 1843
- Dick, J., F. Y. Kuo, F. Pillichshammer, and I. H. Sloan. *Construction algorithms for polynomial lattice rules for multivariate integration*, 1895
- Dobcsányi, Peter. *See Conder, Marston*
- Doche, Christophe. *Even moments of generalized Rudin–Shapiro polynomials*, 1923
- Dörfler, W., and M. Ainsworth. *Reliable a posteriori error control for nonconforming finite element approximation of Stokes flow*, 1599
- Drăgănescu, Andrei, Todd F. Dupont, and L. Ridgway Scott. *Failure of the discrete maximum principle for an elliptic finite element problem*, 1
- Drmotá, Michael, Bernhard Gittenberger, and Thomas Klausner. *Extended admissible functions and Gaussian limiting distributions*, 1953
- Du, Qiang, and Lili Ju. *Approximations of a Ginzburg-Landau model for superconducting hollow spheres based on spherical centroidal Voronoi tessellations*, 1257
- Dupont, Todd F. *See Ayati, Bruce P.*
- . *See Drăgănescu, Andrei*
- Durán, Ricardo G., and Ariel L. Lombardi. *Error estimates on anisotropic \mathcal{Q}_1 elements for functions in weighted Sobolev spaces*, 1679
- Enge, Andreas. *See Basiri, Abdolali*
- Engquist, Bjorn, and Yen-Hsi Tsai. *Heterogeneous multiscale methods for stiff ordinary differential equations*, 1707
- Ern, Alexandre. *See Burman, Erik*
- Everest, Graham, and Helen King. *Prime powers in elliptic divisibility sequences*, 2061
- Farmer, D. W., and S. Lemurell. *Deformations of Maass forms*, 1967
- Farrell, P. A., E. O’Riordan, and G. I. Shishkin. *A class of singularly perturbed semilinear differential equations with interior layers*, 1759
- Faugère, Jean-Charles. *See Basiri, Abdolali*
- Ferracina, L., and M. N. Spijker. *An extension and analysis of the Shu-Osher representation of Runge-Kutta methods*, 201
- Flammang, Valérie, and Georges Rhin. *Algebraic integers whose conjugates all lie in an ellipse*, 2007
- Franchi, Bruno. *See Achdou, Yves*
- Freitas, Pedro. *Integrals of polylogarithmic functions, recurrence relations, and associated Euler sums*, 1425
- Gander, Martin J., and Laurence Halpern. *Absorbing boundary conditions for the wave equation and parallel computing*, 153
- Gaudry, P., and É. Schost. *Modular equations for hyperelliptic curves*, 429
- Gavrilyuk, Ivan P., Wolfgang Hackbusch, and Boris N. Khoromskij. *Data-sparse approximation to a class of operator-valued functions*, 681
- Gavrilyuk, Ivan P., and Volodymyr L. Makarov. *Algorithms without accuracy saturation for evolution equations in Hilbert and Banach spaces*, 555
- Girault, Vivette, Béatrice Rivière, and Mary F. Wheeler. *A discontinuous Galerkin method with nonoverlapping domain decomposition for the Stokes and Navier-Stokes problems*, 53
- Gittenberger, Bernhard. *See Drmotá, Michael*
- Gomez-Perez, Domingo. *See Blackburn, Simon R.*

- González-Vera, P. *See* Díaz-Mendoza, C.
- Gopalakrishnan, Jayadeep. *See* Cockburn, Bernardo
- Gracia, J. L. *See* Clavero, C.
- Guo, Chun-Hua, and Peter Lancaster. *Algorithms for hyperbolic quadratic eigenvalue problems*, 1777
- Gürel, Nicolas. *See* Basiri, Abdolali

Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from www.ams.org/journals/. Subscription prices for Volume 74 (2005) are as follows: for paper delivery, \$453 list, \$362 institutional member, \$408 corporate member, \$294 member of CBMS organizations; \$272 individual member; for electronic delivery, \$408 list, \$326 institutional member, \$367 corporate member, \$265 member of CBMS organizations, \$245 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$15 for surface delivery outside the United States and India; \$18 to India. Expedited delivery to destinations in North America is \$17; elsewhere \$56.

Back number information. For back issues see the www.ams.org/bookstore.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to *Mathematics of Computation*, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 74, No. 249

January 2005

Andrei Drăgănescu, Todd F. Dupont, and L. Ridgway Scott , Failure of the discrete maximum principle for an elliptic finite element problem	1
Dietrich Braess and Pingbing Ming , A finite element method for nearly incompressible elasticity problems	25
Vivette Girault, Béatrice Rivière, and Mary F. Wheeler , A discontinuous Galerkin method with nonoverlapping domain decomposition for the Stokes and Navier-Stokes problems	53
Ohannes Karakashian and Charalambos Makridakis , Convergence of a continuous Galerkin method with mesh modification for nonlinear wave equations	85
Theodoros Katsaounis and Chiara Simeoni , First and second order error estimates for the Upwind Source at Interface method	103
Alfredo Bermúdez, Rodolfo Rodríguez, and Pilar Salgado , Numerical treatment of realistic boundary conditions for the eddy current problem in an electrode via Lagrange multipliers	123
Martin J. Gander and Laurence Halpern , Absorbing boundary conditions for the wave equation and parallel computing	153
Olivier Vacus , Mathematical analysis of absorbing boundary conditions for the wave equation: the corner problem	177
L. Ferracina and M. N. Spijker , An extension and analysis of the Shu-Osher representation of Runge-Kutta methods	201
Guðbjörn F. Jónsson and Stephen A. Vavasis , Accurate solution of polynomial equations using Macaulay resultant matrices	221
Ivan G. Ivanov, Vejdi I. Hasanov, and Frank Uhlig , Improved methods and starting values to solve the matrix equations $X \pm A^*X^{-1}A = I$ iteratively	263
Dorota Dąbrowska , Recovering signals from inner products involving prolate spheroidals in the presence of jitter	279
Emil Cătinaş , The inexact, inexact perturbed, and quasi-Newton methods are equivalent models	291
Chris Connell , A solution to certain polynomial equations with applications to nonlinear fitting	303
Richard D. Neidinger , Directions for computing truncated multivariate Taylor series	321
C. F. Bracciali, Xin Li, and A. Sri Ranga , Real orthogonal polynomials in frequency analysis	341
Holger Then , Maaß cusp forms for large eigenvalues	363
Georges Rhin and Qiang Wu , On the absolute Mahler measure of polynomials having all zeros in a sector. II	383
Abdolali Basiri, Andreas Enge, Jean-Charles Faugère, and Nicolas Gürel , The arithmetic of Jacobian groups of superelliptic cubics	389
J. Miret, R. Moreno, A. Rio, and M. Valls , Determining the 2-Sylov subgroup of an elliptic curve over a finite field	411

P. Gaudry and É. Schost , Modular equations for hyperelliptic curves ...	429
Amod Agashe and William Stein , with an appendix by J. Cremona and B. Mazur , Visible evidence for the Birch and Swinnerton-Dyer conjecture for modular abelian varieties of analytic rank zero	455
Marston Conder and Peter Dobcsányi , Applications and adaptations of the low index subgroups procedure	485
Kenji Koike and Annegret Weng , Construction of CM Picard curves ..	499
Reviews and Descriptions of Tables and Books	519
Germund Dahlquist and Åke Björck 1 , M. Feistauer, J. Felcman, and I. Straskraba 2	

Vol. 74, No. 250

April 2005

Ricardo H. Nochetto and Jae-Hong Pyo , Error estimates for semi-discrete gauge methods for the Navier-Stokes equations	521
Shangyou Zhang , A new family of stable mixed finite elements for the 3D Stokes equations	543
Ivan P. Gavrilyuk and Volodymyr L. Makarov , Algorithms without accuracy saturation for evolution equations in Hilbert and Banach spaces	555
Gerard Awanou and Ming-Jun Lai , Trivariate spline approximations of 3D Navier-Stokes equations	585
Hongkai Zhao , A fast sweeping method for Eikonal equations	603
Z. Wang and R. Wong , Linear difference equations with transition points	629
Ken'ichiro Tanaka, Masaaki Sugihara, and Kazuo Murota , Numerical indefinite integration by double exponential sinc method	655
Ivan P. Gavrilyuk, Wolfgang Hackbusch, and Boris N. Khoromskij , Data-sparse approximation to a class of operator-valued functions	681
Xingping Sun , Strictly positive definite functions on the unit circle	709
S.-L. Qiu and M. Vuorinen , Some properties of the gamma and psi functions, with applications	723
Francis J. Narcowich, Joseph D. Ward, and Holger Wendland , Sobolev bounds on functions with scattered zeros, with applications to radial basis function surface fitting	743
Christian Lubich , On variational approximations in quantum molecular dynamics	765
Yao-Lin Jiang and Richard M. M. Chen , Computing periodic solutions of linear differential-algebraic equations by waveform relaxation	781
Muhammed I. Syam , Conjugate gradient predictor corrector method for solving large scale problems	805
Xinlong Zhou , Subdivision schemes with nonnegative masks	819
Bahman Kalantari , An infinite family of bounds on zeros of analytic functions and relationship to Smale's bound	841
Yingquan Wu and Christoforos N. Hadjicostis , On solving composite power polynomial equations	853

Zhonggang Zeng, Computing multiple roots of inexact polynomials	869
Chris Hurlburt, Computing isogeny covariant differential modular forms .	905
Wilfrid Keller and Jörg Richstein, Solutions of the congruence $a^{p-1} \equiv 1$ (mod p^r)	927
Christian Wittmann, p -class groups of certain extensions of degree p	937
Samir Siksek, On standardized models of isogenous elliptic curves	949
Hwanyup Jung, Sunghan Bae, and Jaehyun Ahn, Determinant formulas for class numbers in function fields	953
Jerzy Browkin, Tame kernels of cubic cyclic fields	967
Richard P. Brent, Samuli Larvala, and Paul Zimmermann, A primitive trinomial of degree 6972593	1001
Kevin G. Hare, More on the total number of prime factors of an odd perfect number	1003
Zhenxiang Zhang, Finding C_3 -strong pseudoprimes	1009
Yong-Gao Chen, Five consecutive positive odd numbers, none of which can be expressed as a sum of two prime powers	1025
Reviews and Descriptions of Tables and Books	1033
L. H. Harper 3 , Wolfgang Bangerth and Rolf Rannacher 4 , Jean- Paul Allouche and Jeffrey Shallit 5 , Avram Sidi 6 , Louis Komzsik 7 , Peter Monk 8 , Pavel Šolín, Karel Segeth, and Ivo Doležel 9

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from <http://www.ams.org/mcom>.

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. An author should submit the manuscript by e-mail to `mathcomp@dam.brown.edu`. The manuscript should be sent as a single postscript or pdf file. Files can be compressed using zip or gzip making the files smaller in size. If e-mail submission is not feasible, three paper copies should be submitted. If the office of the Managing Editor is not able to print the file received from an e-mail submission, the author will be contacted and asked to send three paper copies instead. The author may suggest an appropriate editor for his or her paper. All paper copies of contributions and all books for review should be addressed to Chi-Wang Shu, Managing Editor, Mathematics of Computation, Division of Applied Mathematics, Brown University, 182 George Street, Providence, RI 02912 USA. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Managing Editor, and it is the responsibility of the author to submit manuscripts directly to this office.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief and reasonably self-contained. Included with the footnotes to the paper should be the 2000 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The list of classifications is also available in print starting with the 1999 annual index of *Mathematical Reviews*. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from www.ams.org/publications/. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

Electronically prepared manuscripts. For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$. To this end, the Society has prepared $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, the *AMS Author Handbook*, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ style file and the `\label` and `\ref` commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of $\mathcal{T}\mathcal{E}\mathcal{X}$, using $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ papers also move more efficiently through the production stream, helping to minimize publishing costs.

$\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ is the highly preferred format of $\mathcal{T}\mathcal{E}\mathcal{X}$, but author packages are also available in $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ or plain $\mathcal{T}\mathcal{E}\mathcal{X}$ are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production system. $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ users will find that $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ is the same as $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ with additional commands to simplify the typesetting of mathematics, and users of plain $\mathcal{T}\mathcal{E}\mathcal{X}$ should have the foundation for learning $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$.

Authors may retrieve an author package from the AMS website starting from www.ams.org/tex/ or via FTP to [ftp.ams.org](ftp://ftp.ams.org) (login as `anonymous`, enter username as password, and type `cd pub/author-info`). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format following the author packages link from www.ams.org/tex/. The author package can also be obtained free of charge by sending email to pub@ams.org (Internet) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ or $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$, Macintosh or IBM (3.5) format, and the publication in which your paper will appear. Please be sure to include your complete mailing address.

The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper manuscript to the Managing Editor, who will forward a copy to the Providence office. Editors will require authors to send their electronically prepared manuscripts to the Providence office in a timely fashion. Electronically prepared manuscripts can be submitted via the web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org (Internet), or sent on diskette to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or diskette, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/jourhtml/authors.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

AMS policy on making changes to articles after posting. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of

the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata article to the Editor. The errata article will appear in a future print issue and will link back and forth on the web to the original article online.

Secure manuscript tracking on the Web and via email. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/ or via email sent to mstrack-query@ams.org. To access by email, on the subject line of the message simply enter the AMS ID and Article ID. To track more than one manuscript by email, choose one of the Article IDs and enter the AMS ID and the Article ID followed by the word *all* on the subject line. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to mcom-query@ams.org.

T_EX files available. Beginning with the January 1992 issue of the *Bulletin* and the January 1996 issues of *Transactions*, *Proceedings*, *Mathematics of Computation*, and the *Journal of the AMS*, T_EX files can be downloaded from the AMS website, starting from www.ams.org/journals/. Authors without Web access may request their files at the address given below after the article has been published. For *Bulletin* papers published in 1987 through 1991 and for *Transactions*, *Proceedings*, *Mathematics of Computation*, and the *Journal of the AMS* papers published in 1987 through 1995, T_EX files are available upon request for authors without Web access by sending email to file-request@ams.org or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The T_EX file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because T_EX production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, T_EX files cannot be guaranteed to run through the author's version of T_EX without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's T_EX environment.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to mcom-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
