Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from www.ams.org/journals/. Subscription prices for Volume 77 (2008) are as follows: for paper delivery, \$505 list, \$404 institutional member, \$455 corporate member, \$328 member of CBMS organizations; \$303 individual member; for electronic delivery, \$455 list, \$364 institutional member, \$410 corporate member, \$296 member of CBMS organizations, \$273 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$18 for surface delivery outside the United States and India; \$19 to India. Expedited delivery to destinations in North America is \$27; elsewhere \$56. For paper delivery a late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year.

Back number information. For back issues see the www.ams.org/bookstore.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation (ISSN 0025-5718) is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

This journal is indexed in *Mathematical Reviews*, *Zentralblatt MATH*, *Science Citation Index®*, *Science Citation Index™-Expanded*, *ISI Alerting ServicesSM*, *CompuMath Citation Index®*, and *Current Contents®/Physical, Chemical & Earth Sciences*. This journal is archived in *Portico*.

⊗ The paper used in this book is acid-free and falls within the guidelines established to ensure permanence and durability.

MATHEMATICS OF COMPUTATION
CONTENTS

Vol. 77, No. 264

October 2008

<p>Gerard R. Richter, On the order of convergence of the discontinuous Galerkin method for hyperbolic equations</p> <p>Bernardo Cockburn, Bo Dong, and Johnny Guzmán, A superconvergent LDG-hybridizable Galerkin method for second-order elliptic problems</p> <p>Mark Ainsworth and Richard Rankin, Robust a posteriori error estimation for the nonconforming Fortin–Soulie finite element approximation</p> <p>Dylan M. Copeland, Jayadeep Gopalakrishnan, and Joseph E. Pasciak, A mixed method for axisymmetric div-curl systems</p> <p>M. Costabel, M. Dauge, and L. Demkowicz, Polynomial extension operators for H^1, $\mathbf{H}(\text{curl})$ and $\mathbf{H}(\text{div})$-spaces on a cube</p> <p>Andrei Drăgănescu and Todd F. Dupont, Optimal order multilevel preconditioners for regularized ill-posed problems</p> <p>Sashikumaar Ganesan, Gunar Matthies, and Lutz Tobiska, Local projection stabilization of equal order interpolation applied to the Stokes problem</p> <p>Qun Lin, Hung-Tsai Huang, and Zi-Cai Li, New expansions of numerical eigenvalues for $-\Delta u = \lambda \rho u$ by nonconforming elements</p> <p>R. Bruce Kellogg, Torsten Linss, and Martin Stynes, A finite difference method on layer-adapted meshes for an elliptic reaction-diffusion system in two dimensions</p> <p>Yinnian He, The Euler implicit/explicit scheme for the 2D time-dependent Navier-Stokes equations with smooth or non-smooth initial data</p> <p>Vladimir B. Andreev and Natalia Kopteva, Pointwise approximation of corner singularities for a singularly perturbed reaction-diffusion equation in an L-shaped domain</p> <p>Christian Lubich, On splitting methods for Schrödinger-Poisson and cubic nonlinear Schrödinger equations</p> <p>V. Cortés and J. M. Peña, A stable test for strict sign regularity</p> <p>Zeng Xin Wei, Guo Yin Li, and Li Qun Qi, Global convergence of the Polak-Ribière-Polyak conjugate gradient method with an Armijo-type inexact line search for nonconvex unconstrained optimization problems</p> <p>Qiang Ye, Computing singular values of diagonally dominant matrices to high relative accuracy</p> <p>Wei-Jun Zhou and Dong-Hui Li, A globally convergent BFGS method for nonlinear monotone equations without any merit functions</p> <p>Franz Peherstorfer, Positive quadrature formulas III: asymptotics of weights</p> <p>Stamatis Koumandos, Monotonicity of some functions involving the gamma and psi functions</p> <p>Alfredo Deaño, Javier Segura, and Nico M. Temme, Identifying minimal and dominant solutions for Kummer recursions</p> <p>Michael S. Floater and Tom Lyche, Divided differences of inverse functions and partitions of a convex polygon</p>	<p>1871</p> <p>1887</p> <p>1917</p> <p>1941</p> <p>1967</p> <p>2001</p> <p>2039</p> <p>2061</p> <p>2085</p> <p>2097</p> <p>2125</p> <p>2141</p> <p>2155</p> <p>2173</p> <p>2195</p> <p>2231</p> <p>2241</p> <p>2261</p> <p>2277</p> <p>2295</p>

Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from www.ams.org/journals/. Subscription prices for Volume 77 (2008) are as follows: for paper delivery, \$505 list, \$404 institutional member, \$455 corporate member, \$328 member of CBMS organizations; \$303 individual member; for electronic delivery, \$455 list, \$364 institutional member, \$410 corporate member, \$296 member of CBMS organizations, \$273 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$18 for surface delivery outside the United States and India; \$19 to India. Expedited delivery to destinations in North America is \$27; elsewhere \$56. For paper delivery a late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year.

Back number information. For back issues see the www.ams.org/bookstore.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation (ISSN 0025-5718) is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

This journal is indexed in *Mathematical Reviews*, *Zentralblatt MATH*, *Science Citation Index®*, *Science Citation Index™-Expanded*, *ISI Alerting ServicesSM*, *CompuMath Citation Index®*, and *Current Contents®/Physical, Chemical & Earth Sciences*. This journal is archived in *Portico*.

⊗ The paper used in this book is acid-free and falls within the guidelines established to ensure permanence and durability.

MATHEMATICS OF COMPUTATION
CONTENTS

Vol. 77, No. 261

January 2008

James H. Bramble and Joseph E. Pasciak, Analysis of a finite element PML approximation for the three dimensional time-harmonic Maxwell problem	1
Vidar Thomée and Lars B. Wahlbin, On the existence of maximum principles in parabolic finite element equations	11
Dmitriy Leykekhman, Uniform error estimates in the finite element method for a singularly perturbed reaction-diffusion problem	21
Giancarlo Sangalli, Robust a-posteriori estimator for advection-diffusion-reaction problems	41
Christoph Schwab and Rob Stevenson, Adaptive wavelet algorithms for elliptic PDE's on product domains	71
Nicolas Besse and Michel Mehrenberger, Convergence of classes of high-order semi-Lagrangian schemes for the Vlasov–Poisson system	93
François Delarue and Stéphane Menozzi, An interpolated stochastic algorithm for quasi-linear PDEs	125
Simon Malham and Jitse Niesen, Evaluating the Evans function: Order reduction in numerical methods	159
Ben-Yu Guo, Zhong-Qing Wang, Hong-Jiong Tian, and Li-Lian Wang, Integration processes of ordinary differential equations based on Laguerre-Radau interpolations	181
Emmanuil H. Georgoulis, Inverse-type estimates on hp -finite element spaces and applications	201
Peter Oswald, A counterexample concerning the L_2 -projector onto linear spline spaces	221
Rob Stevenson, The completion of locally refined simplicial partitions created by bisection	227
Carlos Zuppa, Modified Taylor reproducing formulas and h - p clouds	243
Weiming Cao, An interpolation error estimate in \mathcal{R}^2 based on the anisotropic measures of higher order derivatives	265
Rong-Qing Jia and Song-Tao Liu, C^1 spline wavelets on triangulations	287
Lyonell Boulton, Peter Lancaster, and Panayiotis Psarrakos, On pseudospectra of matrix polynomials and their boundaries	313
Ren-Cang Li, On Meinardus' examples for the conjugate gradient method	335
D. A. Bini, Y. Eidelman, L. Gemignani, and I. Gohberg, The unitary completion and QR iterations for a class of structured matrices	353
Goetz Alefeld and Xiaojun Chen, A regularized projection method for complementarity problems with non-Lipschitzian functions	379
Jens Keiner and Daniel Potts, Fast evaluation of quadrature formulae on the sphere	397
Christine Choirat and Raffaello Seri, Statistical properties of generalized discrepancies	421
Venkatesan Guruswami and Anindya C. Patthak, Correlated algebraic-geometric codes: Improved list decoding over bounded alphabets	447

S. Gurak, Explicit values of multi-dimensional Kloosterman sums for prime powers, II	475
Jonathan Bayless, The Lucas-Pratt primality tree	495
M. Bauer, M. J. Jacobson, Jr., Y. Lee, and R. Scheidler, Construction of hyperelliptic function fields of high three-rank	503
Don Coppersmith, Nick Howgrave-Graham, and S. V. Nagaraj, Divisors in residue classes, constructively	531
J. M. Chick and G. H. Davies, The evaluation of κ_3	547
Jason E. Gower and Samuel S. Wagstaff, Jr., Square form factorization	551
Niels Möller, On Schönhage's algorithm and subquadratic integer GCD computation	589
Reviews and Descriptions of Tables and Books	609
Amit Bhaya and Eugenius Kaszkurewicz 1	

Vol. 77, No. 262

April 2008

C. Carstensen and Jun Hu, A posteriori error analysis for conforming MITC elements for Reissner-Mindlin plates	611
Joachim Schöberl, A posteriori error estimates for Maxwell equations ...	633
Dietrich Braess and Joachim Schöberl, Equilibrated residual error estimator for edge elements	651
Junqing Chen and Zhiming Chen, An adaptive perfectly matched layer technique for 3-D time-harmonic electromagnetic scattering problems .	673
Yingda Cheng and Chi-Wang Shu, A discontinuous Galerkin finite element method for time dependent partial differential equations with higher order derivatives	699
Thirupathi Gudi, Neela Nataraj, and Amiya K. Pani, An hp-local discontinuous Galerkin method for some quasilinear elliptic boundary value problems of nonmonotone type	731
Qun Lin and Jichun Li, Superconvergence analysis for Maxwell's equations in dispersive media	757
Sören Bartels, Joy Ko, and Andreas Prohl, Numerical analysis of an explicit approximation scheme for the Landau-Lifshitz-Gilbert equation	773
A. El Hajj and N. Forcadel, A convergent scheme for a non-local coupled system modelling dislocations densities dynamics	789
Snorre H. Christiansen and Ragnar Winther, Smoothed projections in finite element exterior calculus	813
Young-Ju Lee, Jinbiao Wu, Jinchao Xu, and Ludmil Zikatanov, A sharp convergence estimate for the method of subspace corrections for singular systems of equations	831
Jean-Pierre Bourgade and Francis Filbet, Convergence of a finite volume scheme for coagulation-fragmentation equations	851
Zhong-qing Wang and Ben-yu Guo, Jacobi rational approximation and spectral method for differential equations of degenerate type	883

A. Ambroso, C. Chalons, F. Coquel, E. Godlewski, F. Lagoutière, P.-A. Raviart, and N. Seguin, Coupling of general Lagrangian systems	909
Mapundi Banda, Axel Klar, Lorenzo Pareschi, and Mohammed Seaïd, Lattice-Boltzmann type relaxation systems and high order relaxation schemes for the incompressible Navier-Stokes equations	943
Karl Deckers, Joris Van Deun, and Adhemar Bultheel, Rational Gauss-Chebyshev quadrature formulas for complex poles outside $[-1, 1]$	967
Gradimir V. Milovanović, Miodrag M. Spalević, and Miroslav S. Pranić, Maximum of the modulus of kernels in Gauss-Turán quadratures	985
Joost Rommes, Arnoldi and Jacobi-Davidson methods for generalized eigenvalue problems $Ax = \lambda Bx$ with singular B	995
Gero Hecklin, Günther Nürnberger, Larry L. Schumaker, and Frank Zeilfelder, A local Lagrange interpolation method based on C^1 cubic splines on Freudenthal partitions	1017
Yi Jiang, William W. Hager, and Jian Li, The generalized triangular decomposition	1037
Vincent Y. B. Chen, William Y. C. Chen, and Nancy S. S. Gu, The Abel Lemma and the q-Gosper Algorithm	1057
Vassil Dimitrov, Laurent Imbert, and Pradeep K. Mishra, The double-base number system and its application to elliptic curve cryptography	1075
Amnon Besser and Rob de Jeu, $\text{Li}^{(p)}$-service? An algorithm for computing p-adic polylogarithms	1105
So Ryong Park, Jinsoo Bae, Hyun Gu Kang, and Ickho Song, On the polynomial representation for the number of partitions with fixed length	1135

Mark Bauer and Michael A. Bennett, Prime factors of consecutive integers	2455

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from <http://www.ams.org/mcom>.

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at www.ams.org/cgi-bin/peertrack/submission.pl, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2000 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The list of classifications is also available in print starting with the 1999 annual index of *Mathematical Reviews*. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from www.ams.org/publications/. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup.

Electronically prepared manuscripts. For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for *AMS-L^AT_EX*. To this end, the Society has prepared *AMS-L^AT_EX* author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the *AMS-L^AT_EX* style file and the \label and \ref commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of *T_EX*, using *AMS-L^AT_EX* also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. *AMS-L^AT_EX* papers also move more efficiently through the production stream, helping to minimize publishing costs.

AMS-L^AT_EX is the highly preferred format of *T_EX*, but author packages are also available in *AMS-T_EX*. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in *L^AT_EX* or plain *T_EX* are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production

system. L^AT_EX users will find that *\mathcal{AM} S-L^AT_EX* is the same as L^AT_EX with additional commands to simplify the typesetting of mathematics, and users of plain T_EX should have the foundation for learning *\mathcal{AM} S-L^AT_EX*.

Authors may retrieve an author package from the AMS website starting from www.ams.org/tex/ or via FTP to [ftp.ams.org](ftp://ftp.ams.org) (login as **anonymous**, enter username as password, and type `cd pub/author-info`). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format following the author packages link from www.ams.org/tex/. The author package can also be obtained free of charge by sending email to tech-support@ams.org (Internet) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify *\mathcal{AM} S-L^AT_EX* or *\mathcal{AM} S-T_EX* and the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org (Internet), or sent on diskette to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or diskette, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/jourhtml/authors.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

AMS policy on making changes to articles after posting. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata

article. The errata article will appear in a future print issue and will link back and forth on the web to the original article online.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to mcom-query@ams.org.

T_EX files available upon request. T_EX files are available upon request for authors by sending email to file-request@ams.org or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The T_EX file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because T_EX production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, T_EX files cannot be guaranteed to run through the author's version of T_EX without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's T_EX environment.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to mcom-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
