Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly and is also accessible electronically from `www.ams.org/journals/`. Subscription prices for Volume 80 (2011) are as follows: for paper delivery, US$554 list, US$443.20 institutional member, US$498.60 corporate member, US$360.10 member of CBMS organizations; US$332.40 individual member; for electronic delivery, US$499 list, US$399.20 institutional member, US$449.10 corporate member, US$324.35 member of CBMS organizations, US$299.40 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add US$30 for surface delivery outside the United States and India; US$41 to India. Expedited delivery to destinations in North America is US$30; elsewhere US$77. Subscription renewals are subject to late fees. See `www.ams.org/journal-faq` for more journal subscription information.

Back number information. For back issues see the `www.ams.org/bookstore`.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to `reprint-permission@ams.org`.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation (ISSN 0025-5718) is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

© 2011 by the American Mathematical Society. All rights reserved.

This journal is indexed in *Mathematical Reviews*, *Zentralblatt MATH*, *Science Citation Index®*, *Science Citation Index™–Expanded*, *ISI Alerting Services℠*, *CompuMath Citation Index®*, and *Current Contents®/Physical, Chemical & Earth Sciences*. This journal is archived in *Portico*.

♾ The paper used in this book is acid-free and falls within the guidelines established to ensure permanence and durability.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 80, No. 275 **July 2011**

Ricardo G. Durán, Rodolfo Rodríguez, and Frank Sanhueza, Numerical analysis of a finite element method to compute the vibration modes of a Reissner-Mindlin laminated plate 1239

Christoph Ortner, A priori and a posteriori analysis of the quasinonlocal quasicontinuum method in 1D 1265

Xiaozhe Hu and Xiaoliang Cheng, Acceleration of a two-grid method for eigenvalue problems 1287

Xiaobing Feng and Michael Neilan, Discontinuous finite element methods for a bi-wave equation modeling d-wave superconductors 1303

Slimane Adjerid and Thomas Weinhart, Discontinuous Galerkin error estimation for linear symmetrizable hyperbolic systems 1335

Yumin Lin, Xianjuan Li, and Chuanju Xu, Finite difference/spectral approximations for the fractional cable equation 1369

M. Ganesh, Q. T. Le Gia, and I. H. Sloan, A pseudospectral quadrature method for Navier-Stokes equations on rotating spheres 1397

István Gyöngy and Nicolai Krylov, Accelerated finite difference schemes for second order degenerate elliptic and parabolic problems in the whole space 1431

Kenneth H. Karlsen and Trygve K. Karper, Convergence of a mixed method for a semi-stationary compressible Stokes system 1459

Rob Stevenson, Divergence-free wavelet bases on the hypercube: Free-slip boundary conditions, and applications for solving the instationary Stokes equations 1499

Rong-Qing Jia and Wei Zhao, Riesz bases of wavelets and applications to numerical solutions of elliptic equations 1525

Akil C. Narayan and Jan S. Hesthaven, A generalization of the Wiener rational basis functions on infinite intervals: Part I–derivation and properties 1557

F. R. de Hoog, R. S. Anderssen, and M. A. Lukas, Differentiation of matrix functionals using triangular factorization 1585

Chi-Kwong Li, Yiu-Tung Poon, and Thomas Schulte-Herbrüggen, Least-squares approximation by elements from matrix orbits achieved by gradient flows on compact lie groups 1601

L. Bos, J.-P. Calvi, N. Levenberg, A. Sommariva, and M. Vianello, Geometric weakly admissible meshes, discrete least squares approximations and approximate Fekete points 1623

K. A. Ariyawansa and Yuntao Zhu, A class of polynomial volumetric barrier decomposition algorithms for stochastic semidefinite programming 1639

Avram Sidi, Asymptotic expansions of Legendre series coefficients for functions with interior and endpoint singularities 1663

Franz Peherstorfer, Positive trigonometric quadrature formulas and quadrature on the unit circle 1685

C. Boonyasiriwat, K. Sikorski, and C. Tsay, Circumscribed ellipsoid algorithm for fixed-point problems 1703
Toshio Fukushima, Precise and fast computation of the general complete elliptic integral of the second kind 1725
Sheehan Olver, Computing the Hilbert transform and its inverse 1745
H. M. Srivastava, Jian-Rong Zhou, and Zhi-Gang Wang, Asymptotic distributions of the zeros of certain classes of hypergeometric functions and polynomials 1769
Ghaith A. Hiary, An amortized-complexity method to compute the Riemann zeta function 1785
Tsz-Wo Sze, with an Appendix by Lawrence C. Washington, On taking square roots without quadratic nonresidues over finite fields ... 1797
Stéphane R. Louboutin, Upper bounds for residues of Dedekind zeta functions and class numbers of cubic and quartic number fields 1813
Régis Dupont, Fast evaluation of modular functions using Newton iterations and the AGM 1823
Hao Pan and Wei Zhang, On the integers of the form $p^2 + b^2 + 2^n$ and $b_1^2 + b_2^2 + 2^{n^2}$ 1849
Anders Björn and Hans Riesel, Table errata 2 to "Factors of generalized Fermat numbers" 1865
Reviews and Descriptions of Tables and Books 1867
Yijun Liu **2**

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from `http://www.ams.org/mcom`.

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at `www.ams.org/submission/mcom`, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2010 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from `www.ams.org/msc/`. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from `www.ams.org/msnhtml/serials.pdf`. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at `www.ams.org/mrlookup/`.

Electronically prepared manuscripts. For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for $\mathcal{AMS}$-LaTeX. To this end, the Society has prepared $\mathcal{AMS}$-LaTeX author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the $\mathcal{AMS}$-LaTeX style file and the \label and \ref commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of TeX, using $\mathcal{AMS}$-LaTeX also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. $\mathcal{AMS}$-LaTeX papers also move more efficiently through the production stream, helping to minimize publishing costs.

$\mathcal{AMS}$-LaTeX is the highly preferred format of TeX, but author packages are also available in $\mathcal{AMS}$-TeX. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in LaTeX or plain TeX are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production system. LaTeX users will find that $\mathcal{AMS}$-LaTeX is the same as LaTeX with additional

commands to simplify the typesetting of mathematics, and users of plain TEX should have the foundation for learning $\mathcal{AMS}$-LATEX.

Authors may retrieve an author package for *Mathematics of Computation* from `www.ams.org/mcom/mcomauthorpac.html` or via FTP to `ftp.ams.org` (login as `anonymous`, enter your complete email address as password, and type `cd pub/author-info`). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to `tech-support@ams.org` or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify $\mathcal{AMS}$-LATEX or $\mathcal{AMS}$-TEX and the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at `www.ams.org/submit-book-journal/`, sent via email to `pub-submit@ams.org`, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from `www.ams.org/authors/journals.html`. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a "hairline" for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

AMS policy on making changes to articles after posting. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an "Added after posting" section may be added to the paper right before the References when there is a critical error in the content of the paper. The "Added after posting" section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The "Added after posting" section remains a permanent part of the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata article. The errata article will appear in a future print issue and will link back and forth on the web to the original article online.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from `www.ams.org/mstrack/`. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to `mcom-query@ams.org`.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to `mcom-query@ams.org` or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
