Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology.

Submission information. See **Information for Authors** at the end of this issue.

Publication on the AMS website. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published bimonthly and is also accessible electronically from www.ams.org/journals/. Subscription prices for Volume 86 (2017) are as follows: for paper delivery, US\$749.00 list, US\$599.20 institutional member, US\$674.10 corporate member; US\$449.40 individual member; for electronic delivery, US\$659.00 list, US\$527.20 institutional member, US\$593.10 corporate member, US\$395.40 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add US\$6 for delivery within the United States; US\$36 for delivery outside the United States. Subscription renewals are subject to late fees. See www.ams.org/help-faq for more journal subscription information.

Back number information. For back issues see the www.ams.org/backvols.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews, provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication is permitted only under license from the American Mathematical Society. Permissions to reuse portions of AMS publication content are handled by Copyright Clearance Center's RightsLink® service. For more information, visit: www.ams.org/rightslink.

Translation rights and licensed reprint requests should be sent to: reprint-permission@ams.org.

Excluded from these provisions is material for which the author holds copyright. In such cases, requests for permission to reuse or reprint material should be addressed directly to the author(s). Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.

Mathematics of Computation (ISSN 0025-5718 (print); ISSN 1088-6842 (online)) is published bimonthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to *Mathematics of Computation*, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

CONTENTS

Vol. 86, No. 308

November 2017

Dietmar Gallistl, Stable splitting of polyharmonic operators by generalized Stokes systems	2555
Weikun Shan and Huiyuan Li, The triangular spectral element method for Stokes eigenvalues	2579
Karl Larsson and Mats G. Larson, A continuous/discontinuous Galerkin method and a priori error estimates for the biharmonic problem on surfaces	2613
M. Aurada, M. Feischl, T. Führer, M. Karkulik, J. M. Melenk, and D. Praetorius, Local inverse estimates for non-local boundary integral operators	2651
Danping Yang, Non-iterative parallel Schwarz algorithms based on overlapping domain decomposition for parabolic partial differential equations	2687
Hui Huang and Jian-Guo Liu, Error estimate of a random particle blob method for the Keller-Segel equation	2719
David M. Ambrose, Yang Liu, and Michael Siegel, Convergence of a boundary integral method for 3D interfacial Darcy flow with surface tension	2745
M. N. Spijker, Stability and boundedness in the numerical solution of initial value problems	2777
Victor Y. Pan, Fast approximate computations with Cauchy matrices and polynomials	2799
Frances Y. Kuo, Robert Scheichl, Christoph Schwab, Ian H. Sloan, and Elisabeth Ullmann, Multilevel Quasi-Monte Carlo methods for lognormal diffusion problems	2827
J. Rafael Sendra, David Sevilla, and Carlos Villarino, Covering rational ruled surfaces	2861
Anton Leykin and Daniel Plaumann, Determinantal representations of hyperbolic curves via polynomial homotopy continuation	2877
Jens Franke, Thorsten Kleinjung, Jan Bütthe, and Alexander Jost, A practical analytic method for calculating $\pi(x)$	2889
Adrian-Maria Scheerer, Computable absolutely normal numbers and discrepancies	2911
Nicolás Álvarez and Verónica Becher, M. Levin's construction of absolutely normal numbers with very low discrepancy	2927
Markus Hittmeir, Deterministic factorization of sums and differences of powers	2947
Jürgen Hausen, Simon Keicher, and Rüdiger Wolf, Computing automorphisms of Mori dream spaces	2955
Kevin Atighehchi, Stéphane Ballet, Alexis Bonnetcaze, and Robert Rolland, Arithmetic in finite fields based on the Chudnovsky-Chudnovsky multiplication algorithm	2975
Luis Felipe Tabera, A parametric version of the Hilbert-Hurwitz theorem using hypercircles	3001

Elliot Wells, Computing canonical heights on the projective line with no factorization	3019
William Hart, David Harvey, and Wilson Ong, Irregular primes to two billion	3031

INDEX TO VOLUME 86 (2017)

- Abdulle, Assyr, and Patrick Henning. *Localized orthogonal decomposition method for the wave equation with a continuum of scales*, 549
- Adell, José A., and Alberto Lekuona. *Fast computation of the Stieltjes constants*, 2479
- Aguillon, Nina, Frédéric Lagoutière, and Nicolas Seguin. *Convergence of finite volume schemes for the coupling between the inviscid Burgers equation and a particle*, 157
- Akrivis, Georgios, Buyang Li, and Christian Lubich. *Combining maximal regularity and energy estimates for time discretizations of quasilinear parabolic equations*, 1527
- Álvarez, Nicolás, and Verónica Becher. *M. Levin's construction of absolutely normal numbers with very low discrepancy*, 2927
- Ambrose, David M., Yang Liu, and Michael Siegel. *Convergence of a boundary integral method for 3D interfacial Darcy flow with surface tension*, 2745
- Araya, Makoto, Masaaki Harada, and Sho Suda. *Quasi-unbiased Hadamard matrices and weakly unbiased Hadamard matrices: A coding-theoretic approach*, 951
- Arnold, Douglas N., and Lizao Li. *Finite element exterior calculus with lower-order terms*, 2193
- Atighehchi, Kevin, Stéphane Ballet, Alexis Bonneau, and Robert Rolland. *Arithmetic in finite fields based on the Chudnovsky-Chudnovsky multiplication algorithm*, 2975
- Aurada, M., M. Feischl, T. Führer, M. Karkulik, J. M. Melenk, and D. Praetorius. *Local inverse estimates for non-local boundary integral operators*, 2651
- Bachmayr, Markus, and Albert Cohen. *Kolmogorov widths and low-rank approximations of parametric elliptic PDEs*, 701
- Balakrishnan, Jennifer S., Amnon Besser, and J. Steffen Müller. *Computing integral points on hyperelliptic curves using quadratic Chabauty*, 1403
- Ballet, Stéphane. *See* Atighehchi, Kevin
- Barbulescu, Razvan, and Armand Lachand. *Some mathematical remarks on the polynomial selection in NFS*, 397
- Barrett, John W., Harald Garcke, and Robert Nürnberg. *Finite element approximation for the dynamics of asymmetric fluidic biomembranes*, 1037
- Barron, Thomas, Christopher O'Neill, and Roberto Pelayo. *On dynamic algorithms for factorization invariants in numerical monoids*, 2429
- Barucq, Hélène, Théophile Chaumont-Frelet, and Christian Gout. *Stability analysis of heterogeneous Helmholtz problems and finite element solution based on propagation media approximation*, 2129
- Becher, Verónica. *See* Álvarez, Nicolás
- Bennett, Michael A., and Nicolas Billerey. *Sums of two S-units via Frey-Hellegouarch curves*, 1375
- Benoit, Alexandre, Mioara Joldeș, and Marc Mezzarobba. *Rigorous uniform approximation of D-finite functions using Chebyshev expansions*, 1303
- Berkels, Benjamin, Alexander Effland, and Martin Rumpf. *A posteriori error control for the binary Mumford-Shah model*, 1769
- Besser, Amnon. *See* Balakrishnan, Jennifer S.
- Billerey, Nicolas. *See* Bennett, Michael A.
- Boffi, Daniele, Dietmar Gallistl, Francesca Gardini, and Lucia Gastaldi. *Optimal convergence of adaptive FEM for eigenvalue clusters in mixed form*, 2213
- Bonnecaze, Alexis. *See* Atighehchi, Kevin
- Bresten, Christopher, Sigal Gottlieb, Zachary Grant, Daniel Higgs, David I. Ketcheson, and Adrian Németh. *Explicit strong stability preserving multistep Runge-Kutta methods*, 747
- Buet, Christophe, Bruno Després, Emmanuel Franck, and Thomas Leroy. *Proof of uniform convergence for a cell-centered AP discretization of the hyperbolic heat equation on general meshes*, 1147
- Burman, Erik. *A stabilized nonconforming finite element method for the elliptic Cauchy problem*, 75
- Büthe, Jan. *See* Franke, Jens
- Cai, Zhiqiang, Cuiyu He, and Shun Zhang. *Residual-based a posteriori error estimate for interface problems: Nonconforming linear elements*, 617
- Camaño, Jessika, Ricardo Oyarzúa, and Giordano Tierra. *Analysis of an augmented mixed-FEM for the Navier-Stokes problem*, 589
- Cesmelioglu, Aycil, Bernardo Cockburn, and Weifeng Qiu. *Analysis of a hybridizable discontinuous Galerkin method for the steady-state incompressible Navier-Stokes equations*, 1643

- Chaumont-Frelet, Théophile. *See* Barucq, Hélène
- Chen, Huangxin. *See* Lu, Peipei
- Chen, Wenbin, and Yanqiu Wang. *Minimal degree $H(\text{curl})$ and $H(\text{div})$ conforming finite elements on polytopal meshes*, 2053
- Cheng, Yao, Xiong Meng, and Qiang Zhang. *Application of generalized Gauss–Radau projections for the local discontinuous Galerkin method for linear convection–diffusion equations*, 1233
- Cheng, Yingda, Ching-Shan Chou, Fengyan Li, and Yulong Xing. *L^2 stable discontinuous Galerkin methods for one-dimensional two-way wave equations*, 121
- Chou, Ching-Shan. *See* Cheng, Yingda
- Chowdhury, Sudipto, Thirupathi Gudi, and A. K. Nandakumaran. *Error bounds for a Dirichlet boundary control problem based on energy spaces*, 1103
- Cockburn, Bernardo. *See* Cesmelioglu, Aycil
- Cockburn, Bernardo, Guosheng Fu, and Francisco Javier Sayas. *Superconvergence by M -decompositions. Part I: General theory for HDG methods for diffusion*, 1609
- Cohen, Albert. *See* Bachmayr, Markus
- Cosgrave, John B., and Karl Dilcher. *A role for generalized Fermat numbers*, 899
- Dai, Yu-Hong, Deren Han, Xiaoming Yuan, and Wenxing Zhang. *A sequential updating scheme of the Lagrange multiplier for separable convex programming*, 315
- Després, Bruno. *See* Buet, Christophe
- Di Pietro, Daniele A., and Jérôme Droniou. *A Hybrid High-Order method for Leray–Lions elliptic equations on general meshes*, 2159
- Dilcher, Karl. *See* Cosgrave, John B.
- Droniou, Jérôme. *See* Di Pietro, Daniele A.
- Dubickas, Artūras, Kevin G. Hare, and Jonas Jankauskas. *No two non-real conjugates of a Pisot number have the same imaginary part*, 935
- Dumke, Jan H. *p -adic zeros of quintic forms*, 2469
- Dyn, Nira, and Nir Sharon. *A global approach to the refinement of manifold data*, 375
- Effland, Alexander. *See* Berkels, Benjamin
- Feischl, M. *See* Aurada, M.
- Feng, Xiaobing, Lauren Hennings, and Michael Neilan. *Finite element methods for second order linear elliptic partial differential equations in non-divergence form*, 2025
- Fernández, Julio, and Josep González. *Functions and differentials on the non-split Cartan modular curve of level 11*, 437
- Fisher, Tom. *Higher descents on an elliptic curve with a rational 2-torsion point*, 2493
- Franck, Emmanuel. *See* Buet, Christophe
- Franke, Jens, Thorsten Kleinjung, Jan Bütke, and Alexander Jost. *A practical analytic method for calculating $\pi(x)$* , 2889
- Fu, Guosheng. *See* Cockburn, Bernardo
- Führer, T. *See* Aurada, M.
- Führer, Thomas, Norbert Heuer, and Michael Karkulik. *On the coupling of DPG and BEM*, 2261
- Furihata, Daisuke. *See* Kojima, Hiroki
- Gallet, Matteo, Christoph Koutschan, Zijia Li, Georg Regensburger, Josef Schicho, and Nelly Villamizar. *Planar linkages following a prescribed motion*, 473
- Gallistl, Dietmar. *Stable splitting of polyharmonic operators by generalized Stokes systems*, 2555
- . *See* Boffi, Daniele
- Gander, Martin J., and Yingxiang Xu. *Optimized Schwarz methods with nonoverlapping circular domain decomposition*, 637
- Garcke, Harald. *See* Barrett, John W.
- Gardini, Francesca. *See* Boffi, Daniele
- Garoni, Carlo, Carla Manni, Stefano Serra-Capizzano, Debora Sesana, and Hendrik Speleers. *Spectral analysis and spectral symbol of matrices in isogeometric Galerkin methods*, 1343
- Gaspoz, Fernando D., and Pedro Morin. *Errata to “Approximation classes for adaptive higher order finite element approximation”*, 1525
- Gastaldi, Lucia. *See* Boffi, Daniele
- Gautschi, Walter. *Monotonicity properties of the zeros of Freud and sub-range Freud polynomials: Analytic and empirical results*, 855

- Gerencsér, Máté, and István Gyöngy. *Localization errors in solving stochastic partial differential equations in the whole space*, 2373
- Gil, Jose Ignacio Burgos, and Ariel Pacetti. *Hecke and Sturm bounds for Hilbert modular forms over real quadratic fields*, 1949
- González, Josep. *See* Fernández, Julio
- Gottlieb, Sigal. *See* Bresten, Christopher

Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology.

Submission information. See **Information for Authors** at the end of this issue.

Publication on the AMS website. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published bimonthly and is also accessible electronically from www.ams.org/journals/. Subscription prices for Volume 86 (2017) are as follows: for paper delivery, US\$749.00 list, US\$599.20 institutional member, US\$674.10 corporate member; US\$449.40 individual member; for electronic delivery, US\$659.00 list, US\$527.20 institutional member, US\$593.10 corporate member, US\$395.40 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add US\$6 for delivery within the United States; US\$36 for delivery outside the United States. Subscription renewals are subject to late fees. See www.ams.org/help-faq for more journal subscription information.

Back number information. For back issues see the www.ams.org/backvols.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews, provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication is permitted only under license from the American Mathematical Society. Permissions to reuse portions of AMS publication content are handled by Copyright Clearance Center's RightsLink® service. For more information, visit: www.ams.org/rightslink.

Translation rights and licensed reprint requests should be sent to: reprint-permission@ams.org.

Excluded from these provisions is material for which the author holds copyright. In such cases, requests for permission to reuse or reprint material should be addressed directly to the author(s). Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.

Mathematics of Computation (ISSN 0025-5718 (print); ISSN 1088-6842 (online)) is published bimonthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to *Mathematics of Computation*, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 86, No. 303

January 2017

S. Nicaise and I. Merabet , A mixed discontinuous finite element method for folded Naghdi's shell in Cartesian coordinates	1
Hengguang Li , The W_p^1 stability of the Ritz projection on graded meshes	49
Erik Burman , A stabilized nonconforming finite element method for the elliptic Cauchy problem	75
Alessio Porretta and Enrique Zuazua , Numerical hypocoercivity for the Kolmogorov equation	97
Yingda Cheng, Ching-Shan Chou, Fengyan Li, and Yulong Xing , L² stable discontinuous Galerkin methods for one-dimensional two-way wave equations	121
Nina Aguillon, Frédéric Lagoutière, and Nicolas Seguin , Convergence of finite volume schemes for the coupling between the inviscid Burgers equation and a particle	157
Francis J. Narcowich, Stephen T. Rowe, and Joseph D. Ward , A novel Galerkin method for solving PDES on the sphere using highly localized kernel bases	197
Ronald D. Haynes and Felix Kwok , Discrete analysis of domain decomposition approaches for mesh generation via the equidistribution principle	233
Kanya Ishizaka , A solution to the energy minimization problem constrained by a density function	275
Yu-Hong Dai, Deren Han, Xiaoming Yuan, and Wenxing Zhang , A sequential updating scheme of the Lagrange multiplier for separable convex programming	315
Tongke Wang, Zhifang Liu, and Zhiyue Zhang , The modified composite Gauss type rules for singular integrals using Puiseux expansions	345
Nira Dyn and Nir Sharon , A global approach to the refinement of manifold data	375
Razvan Barbulescu and Armand Lachand , Some mathematical remarks on the polynomial selection in NFS	397
Ali Kamalinejad and Mehrdad Shahshahani , On computations with dessins d'enfants	419
Julio Fernández and Josep González , Functions and differentials on the non-split Cartan modular curve of level 11	437
Bogdan Ichim, Lukas Katthän, and Julio José Moyano-Fernández , How to compute the Stanley depth of a module	455
Matteo Gallet, Christoph Koutschan, Zijia Li, Georg Regensburger, Josef Schicho, and Nelly Villamizar , Planar linkages following a prescribed motion	473

Ossi Niemimäki, Stefan Kurz, and Lauri Kettunen , Structure-preserving mesh coupling based on the Buffa-Christiansen complex ...	507
Diego Paredes, Frédéric Valentin, and Henrique M. Versieux , On the robustness of multiscale hybrid-mixed methods	525
Assyr Abdulle and Patrick Henning , Localized orthogonal decomposition method for the wave equation with a continuum of scales	549
Jessika Camaño, Ricardo Oyarzúa, and Giordano Tierra , Analysis of an augmented mixed-FEM for the Navier-Stokes problem	589
Zhiqiang Cai, Cuiyu He, and Shun Zhang , Residual-based a posteriori error estimate for interface problems: Nonconforming linear elements .	617
Martin J. Gander and Yingxiang Xu , Optimized Schwarz methods with nonoverlapping circular domain decomposition	637
Holger Rauhut and Christoph Schwab , Compressive sensing Petrov-Galerkin approximation of high-dimensional parametric operator equations	661
Markus Bachmayr and Albert Cohen , Kolmogorov widths and low-rank approximations of parametric elliptic PDEs	701
Jian-Guo Liu and Rong Yang , A random particle blob method for the Keller-Segel equation and convergence analysis	725
Christopher Bresten, Sigal Gottlieb, Zachary Grant, Daniel Higgs, David I. Ketcheson, and Adrian Németh , Explicit strong stability preserving multistep Runge–Kutta methods	747
Helmut Harbrecht, Michael Peters, and Markus Siebenmorgen , On the quasi-Monte Carlo method with Halton points for elliptic PDEs with log-normal diffusion	771
Raffaello Seri , Statistical properties of b-adic diaphonies	799
Frances Y. Kuo, Ian H. Sloan, and Henryk Woźniakowski , Multivariate integration for analytic functions with Gaussian kernels .	829
Walter Gautschi , Monotonicity properties of the zeros of Freud and sub-range Freud polynomials: Analytic and empirical results	855
Javier Segura , The Schwarzian-Newton method for solving nonlinear equations, with applications	865
Claude-Pierre Jeannerod, Peter Kornerup, Nicolas Louvet, and Jean-Michel Muller , Error bounds on complex floating-point multiplication with an FMA	881
John B. Cosgrave and Karl Dilcher , A role for generalized Fermat numbers	899
Artūras Dubickas, Kevin G. Hare, and Jonas Jankauskas , No two non-real conjugates of a Pisot number have the same imaginary part .	935
Makoto Araya, Masaaki Harada, and Sho Suda , Quasi-unbiased Hadamard matrices and weakly unbiased Hadamard matrices: A coding-theoretic approach	951
Jonathan Sorenson and Jonathan Webster , Strong pseudoprimes to twelve prime bases	985

Daniel Peterseim , Eliminating the pollution effect in Helmholtz problems by local subscale correction	1005
John W. Barrett, Harald Garcke, and Robert Nürnberg , Finite element approximation for the dynamics of asymmetric fluidic biomembranes	1037
Buyang Li and Weiwei Sun , Maximal L^p analysis of finite element solutions for parabolic equations with nonsmooth coefficients in convex polyhedra	1071
Sudipto Chowdhury, Thirupathi Gudi, and A. K. Nandakumaran , Error bounds for a Dirichlet boundary control problem based on energy spaces	1103
D. Leykekhman and M. Pruitt , On the positivity of discrete harmonic functions and the discrete Harnack inequality for piecewise linear finite elements	1127
Christophe Buet, Bruno Després, Emmanuel Franck, and Thomas Leroy , Proof of uniform convergence for a cell-centered AP discretization of the hyperbolic heat equation on general meshes	1147
Christian Klingenberg, Gero Schnücke, and Yinhua Xia , Arbitrary Lagrangian-Eulerian discontinuous Galerkin method for conservation laws: Analysis and application in one dimension	1203
Yao Cheng, Xiong Meng, and Qiang Zhang , Application of generalized Gauss–Radau projections for the local discontinuous Galerkin method for linear convection–diffusion equations	1233
Qin Li, Jianfeng Lu, and Weiran Sun , Half-space kinetic equations with general boundary conditions	1269
Alexandre Benoit, Mioara Joldeș, and Marc Mezzarobba , Rigorous uniform approximation of D-finite functions using Chebyshev expansions	1303
Carlo Garoni, Carla Manni, Stefano Serra-Capizzano, Debora Sesana, and Hendrik Speleers , Spectral analysis and spectral symbol of matrices in isogeometric Galerkin methods	1343
Michael A. Bennett and Nicolas Billerey , Sums of two S-units via Frey–Hellegouarch curves	1375
Jennifer S. Balakrishnan, Amnon Besser, and J. Steffen Müller , Computing integral points on hyperelliptic curves using quadratic Chabauty	1403
Dohyeong Kim , A modular approach to cubic Thue–Mahler equations ...	1435
Joachim König , Computation of Hurwitz spaces and new explicit polynomials for almost simple Galois groups	1473
Vladimir Yu. Protasov , The Euler binary partition function and subdivision schemes	1499
Fernando D. Gaspoz and Pedro Morin , Errata to “Approximation classes for adaptive higher order finite element approximation”	1525

Georgios Akrivis, Buyang Li, and Christian Lubich , Combining maximal regularity and energy estimates for time discretizations of quasilinear parabolic equations	1527
Peipei Lu, Huangxin Chen, and Weifeng Qiu , An absolutely stable hp -HDG method for the time-harmonic Maxwell equations with high wave number	1553
Buyang Li and Zhimin Zhang , Mathematical and numerical analysis of the time-dependent Ginzburg–Landau equations in nonconvex polygons based on Hodge decomposition	1579
Bernardo Cockburn, Guosheng Fu, and Francisco Javier Sayas , Superconvergence by M -decompositions. Part I: General theory for HDG methods for diffusion	1609
Aycil Cesmelioglu, Bernardo Cockburn, and Weifeng Qiu , Analysis of a hybridizable discontinuous Galerkin method for the steady-state incompressible Navier–Stokes equations	1643
Hailong Guo, Zhimin Zhang, and Ren Zhao , Hessian recovery for finite element methods	1671
Wenming He and Zhimin Zhang , $2k$ superconvergence of Q_k finite elements by anisotropic mesh approximation in weighted Sobolev spaces	1693
Hiroki Kojima, Takayasu Matsuo, and Daisuke Furihata , Some discrete inequalities for central-difference type operators	1719
Vanni Noferini and Javier Pérez , Chebyshev rootfinding via computing eigenvalues of colleague matrices: When is it stable?	1741
Benjamin Berkels, Alexander Effland, and Martin Rumpf , A posteriori error control for the binary Mumford–Shah model	1769
Xiao Wang, Shiqian Ma, and Ya-xiang Yuan , Penalty methods with stochastic approximation for stochastic nonlinear programming	1793
Min Tao and Xiaoming Yuan , Accelerated Uzawa methods for convex optimization	1821
Michael Griebel, Frances Y. Kuo, and Ian H. Sloan , Note on “The smoothing effect of integration in \mathbb{R}^d and the ANOVA decomposition”	1847
Michael Griebel, Frances Y. Kuo, and Ian H. Sloan , The ANOVA decomposition of a non-smooth function of infinitely many variables can have every term smooth	1855
Miodrag M. Spalević , On generalized averaged Gaussian formulas. II ...	1877
Jonathan Jaquette and Miroslav Kramár , On ε approximations of persistence diagrams	1887
Akil Narayan, John D. Jakeman, and Tao Zhou , A Christoffel function weighted least squares algorithm for collocation approximations	1913
Jose Ignacio Burgos Gil and Ariel Pacetti , Hecke and Sturm bounds for Hilbert modular forms over real quadratic fields	1949
Steve Nugent and John Voight , On the arithmetic dimension of triangle groups	1979
Ivan Marin and Götz Pfeiffer , The BMR freeness conjecture for the 2-reflection groups	2005

Xiaobing Feng, Lauren Hennings, and Michael Neilan , Finite element methods for second order linear elliptic partial differential equations in non-divergence form	2025
Wenbin Chen and Yanqiu Wang , Minimal degree $H(\text{curl})$ and $H(\text{div})$ conforming finite elements on polytopal meshes	2053
I. G. Graham, E. A. Spence, and E. Vainikko , Domain decomposition preconditioning for high-frequency Helmholtz problems with absorption	2089
H�el�ene Barucq, Th�eophile Chaumont-Frelet, and Christian Gout , Stability analysis of heterogeneous Helmholtz problems and finite element solution based on propagation media approximation	2129
Daniele A. Di Pietro and J�er�ome Droniou , A Hybrid High-Order method for Leray–Lions elliptic equations on general meshes	2159
Douglas N. Arnold and Lizao Li , Finite element exterior calculus with lower-order terms	2193
Daniele Boffi, Dietmar Gallistl, Francesca Gardini, and Lucia Gastaldi , Optimal convergence of adaptive FEM for eigenvalue clusters in mixed form	2213
Bangti Jin, Raytcho Lazarov, Vidar Thom�e, and Zhi Zhou , On nonnegativity preservation in finite element methods for subdiffusion equations	2239
Thomas F�uhrer, Norbert Heuer, and Michael Karkulik , On the coupling of DPG and BEM	2261
Zhong-qing Wang, Yu-ling Guo, and Li-jun Yi , An hp-version Legendre-Jacobi spectral collocation method for Volterra integro-differential equations with smooth and weakly singular kernels	2285
Robert McLachlan, Klas Modin, and Olivier Verdier , A minimal-variable symplectic integrator on spheres	2325
Lin Lin , Localized spectrum slicing	2345
M�ate Gerencs�er and Istv�an Gy�ongy , Localization errors in solving stochastic partial differential equations in the whole space	2373
Jos�e L. L�opez and Pedro J. Pagola , Analytic formulas for the evaluation of the Pearcey integral	2399
Przemys�law Rutka and Ryszard Smarzewski , Explicit barycentric formulae for osculatory interpolation at roots of classical orthogonal polynomials	2409
Thomas Barron, Christopher O’Neill, and Roberto Pelayo , On dynamic algorithms for factorization invariants in numerical monoids ..	2429
David J. Platt , Isolating some non-trivial zeros of zeta	2449
Jan H. Dumke , p-adic zeros of quintic forms	2469
Jos�e A. Adell and Alberto Lekuona , Fast computation of the Stieltjes constants	2479
Tom Fisher , Higher descents on an elliptic curve with a rational 2-torsion point	2493
L. Guarnieri and L. Vendramin , Skew braces and the Yang–Baxter equation	2519

Pierre Lezowski and Kevin J. McGown , The Euclidean algorithm in quintic and septic cyclic fields	2535
Youness Lamzouri, Xiannan Li, and Kannan Soundararajan , Corrigendum to “Conditional bounds for the least quadratic non-residue and related problems”	2551

Vol. 86, No. 308

November 2017

Dietmar Gallistl , Stable splitting of polyharmonic operators by generalized Stokes systems	2555
Weikun Shan and Huiyuan Li , The triangular spectral element method for Stokes eigenvalues	2579
Karl Larsson and Mats G. Larson , A continuous/discontinuous Galerkin method and a priori error estimates for the biharmonic problem on surfaces	2613
M. Aurada, M. Feischl, T. Führer, M. Karkulik, J. M. Melenk, and D. Praetorius , Local inverse estimates for non-local boundary integral operators	2651
Danping Yang , Non-iterative parallel Schwarz algorithms based on overlapping domain decomposition for parabolic partial differential equations	2687
Hui Huang and Jian-Guo Liu , Error estimate of a random particle blob method for the Keller-Segel equation	2719
David M. Ambrose, Yang Liu, and Michael Siegel , Convergence of a boundary integral method for 3D interfacial Darcy flow with surface tension	2745
M. N. Spijker , Stability and boundedness in the numerical solution of initial value problems	2777
Victor Y. Pan , Fast approximate computations with Cauchy matrices and polynomials	2799
Frances Y. Kuo, Robert Scheichl, Christoph Schwab, Ian H. Sloan, and Elisabeth Ullmann , Multilevel Quasi-Monte Carlo methods for lognormal diffusion problems	2827
J. Rafael Sendra, David Sevilla, and Carlos Villarino , Covering rational ruled surfaces	2861
Anton Leykin and Daniel Plaumann , Determinantal representations of hyperbolic curves via polynomial homotopy continuation	2877
Jens Franke, Thorsten Kleinjung, Jan Büthe, and Alexander Jost , A practical analytic method for calculating $\pi(x)$	2889
Adrian-Maria Scheerer , Computable absolutely normal numbers and discrepancies	2911

Luis Felipe Tabera, A parametric version of the Hilbert-Hurwitz theorem using hypercircles	3001
Elliot Wells, Computing canonical heights on the projective line with no factorization	3019
William Hart, David Harvey, and Wilson Ong, Irregular primes to two billion	3031

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from <http://www.ams.org/mcom>.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer-reviewed. The AMS has a single blind peer-review process in which the reviewers know who the authors of the manuscript are, but the authors do not have access to the information on who the peer reviewers are. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at www.ams.org/submission/mcom, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2010 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from www.ams.org/msnhtml/serials.pdf. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/.

Electronically prepared manuscripts. Manuscripts should be electronically prepared in $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$. To this end, the Society has prepared $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ style file and the `\label` and `\ref` commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for *Mathematics of Computation* from www.ams.org/mcom/mcomauthorpac.html or via FTP to [ftp.ams.org](ftp://ftp.ams.org) (login as `anonymous`, enter your complete email address as password, and type `cd pub/author-info`). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/authors/journals.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

AMS policy on making changes to articles after publication. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to mcom-query@ams.org.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to mcom-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
