Abramo Hefez* (hefez@impa.br), Av. Quintino Bocaiuva, 187 AP. 402, Niteroi, RJ 24360-022, Brazil, and **M. E. Hernandez** and **V. A.S. Bayer**. *Toward the analytic classification of plane curves with two branches.*

After the recent solution of the problem of analytic classification of plane branches proposed by Zariski in the seventies, it is natural to try to solve the same problem for two branches. In this talk we will propose a strategy for the solution of this problem and discuss in some detail how Tjurina's numbers of the curve and of its branches are related. (Received January 30, 2008)
