Daniel K. Nakano* (nakano@math.uga.edu), Department of Mathematics, University of Georgia, Athens, GA 30602. *Lie Superalgebras: Geometry and Cohomology*.

Let \mathfrak{g} be a simple classical Lie superalgebra or a Lie superalgebra of type W. In this talk I will survey recent developments in connecting the geometry of support varieties with the combinatorial notions of defect and atypicality due to Kac-Wakimoto and Serganova. Interesting and important conjectures have been formulated in this direction. Moreover, I will present a new theorem due to Bagci, Kujawa and the speaker on realizability of support varieties for \mathfrak{g} -modules. (Received January 07, 2008)
