**Lev M Shneerson\*** ([Lev.Shneerson@hunter.cuny.edu](mailto:Lev.Shneerson@hunter.cuny.edu)), Department of Mathematics and Statistics, Hunter College of CUNY, 695 Park Avenue, New York, NY 10065. *Polynomial growth in semigroup varieties*. Preliminary report.

In 1989 M. Sapir posed a problem of describing all semigroup varieties in which every finitely generated semigroup has polynomial growth. We will discuss some new corollaries following from the solution of this problem for an arbitrary nonperiodic semigroup variety defined by a system of identities over a finite set of variables.
