Michael Slone* (mslone@ms.uky.edu), Department of Mathematics, University of Kentucky,
Lexington, KY. *An index for non-regular spheres*. Preliminary report.

We study *weakly graded posets*, graded posets in which not all ranks must be populated. We use these to define a modified **ab**-index, and show that an appropriately defined weakly graded Eulerian poset has a **cd**-index. Finally, we apply these results to the study of non-regular CW spheres. (Received September 02, 2006)
