Tatyana S Chmutova* (chmutova@umich.edu), Department of Mathematics, University of Michigan, 530 Church St, Ann Arbor, MI 48109. *Twisted symplectic reflection algebras.*

Given a finite group G , its symplectic representation U , and a two-cocycle ψ we will define a twisted symplectic reflection algebra. We will consider the case of noninjective U and show that it can be reduced to the injective case. In this reduction the cocycle ψ might become nontrivial even if at the beginning it was trivial.
