Carme Calderer** ([mcc@math.umn.edu](mailto:mcc@math.umn.edu)), 127 Vincent Hall, 206 Church Street SE, Minneapolis, MN 55455. *Mathematical modeling of ferroelectric liquid crystals*. Preliminary report.

In this talk, we discuss modeling of ferroelectric liquid crystals which have very interesting properties for applications to everyday life. The key property among them is appearance of spontaneous polarization. We present energy functional and discuss periodic patterns which have been observed in physics literature (Received July 26, 2007)
