The Primordial Genealogy of Geometrical Initial Growth

This genealogy defines “Simplicity Itself,” the terminal cases and rates of uniqueness of simplicity. The 36 geometrical systems inside this field define the Most-Efficient-Minimum expression of the geometrical experience.

Basic measurements (linear, angular, quantum volume and a volume-in-common) are unified into a Simple Quantum Relativity Field. Quantum relativity allows us to fold complexity back on itself into simpler units of structural integrity tracing order back to the original couple of the genealogy; simple rules and simple initial conditions.

Myths to Build By

To answer the “big questions”: Which came first the chicken or the egg? What is Universe expanding into? What is outside the furthest outside? What is the shape of our reality? What was before the beginning? What is the primordial what, how, where, when and why? (Received January 21, 2008)
