Jianjun Paul Tian* (jptian@math.wm.edu), Jones Hall 121, Mathematics Department, College of William and Mary, Williamsburg, VA 23187. *A tumor regrow model*. Preliminary report.

A tumor regrow model

After the resection of a solid brain tumor, especially brain tumor glioma, the second new tumor will grow. We consider a model to describe this regrowth process. The model is a system of partial differential equations with moving boundary. We analyze a simplified version of the model. (Received February 01, 2008)
