Madan L Puri* (puri@indiana.edu), Department of Mathematics, Indiana University, Bloomington, IN 47405, and **Michel Harel**. *Conditional U-Statistics with Applications in Discriminant Analysis, ARMA Processes and Hidden Markov Models and Hidden Markov Models.*

Stute (Ann. Probab. (1991), Ann. Statist. (1994)) introduced a class of conditional U-statistics which generalize the Nadaraya-Watson estimate of a regression function. Under the usual iid set-up, Stute proved the asymptotic normality, weak and strong consistency and the universal consistency of the estimate in the r th mean. Here we extend Stute's results from the independent case to the dependent case. Applications to discriminant analysis, ARMA processes and hidden Markov models are provided.
