**Sonja Stimac\*** ([sonja@math.hr](mailto:sonja@math.hr)), Department of Economics, Kennedyev trg 6, 10000 Zagreb, Croatia. *On Ingram's Conjecture.*

In recent years there has been intensive research of topological properties of inverse limit spaces of tent maps with classification of these spaces as ultimate goal. We will discuss Ingram's conjecture which claims that two inverse limits of tent maps with different slopes are not homeomorphic. (Received August 28, 2008)
