*Fuchsian Riemann-Hilbert problem associated to Frobenius manifolds.*

There are two (dual to each other) Riemann-Hilbert problems naturally associated to every semisimple Frobenius manifold. In the case of Frobenius structures on Hurwitz spaces, the corresponding Riemann-Hilbert problems turn out to be solvable in terms of meromorphic bidifferentials defined on the underlying Riemann surface. In this talk, I will present solutions to one of these Riemann-Hilbert problems (the one with Fuchsian singularities) and discuss their properties and monodromy. (Received August 28, 2009)
