Peter G. Casazza* (casazzap@missouri.edu), Department of Mathematics, University of Missouri, Columbia, MO 65211-4100, and **Janet C. Tremain** (j.tremain@mchsi.com), **Matt Fickus** (Matthew.Fickus@afit.edu) and **Dustin Mixon** (dmixon@princeton.edu).
Kadison-Singer Meets Signal Processing.

We will use variations of the Discrete Fourier Transform from Signal Processing to construct the first concrete counter-examples to 2-paving of projections with constant diagonal $1/2$. (Received January 22, 2010)
