**Francis Valiquette\*** ([valiquette@math.mcgill.ca](mailto:valiquette@math.mcgill.ca)), Department of Mathematics and Statistics, McGill University, 805 Sherbrooke W., Montréal, Québec H3A 2K6, Canada. *Solving Equivalence Problems with the Equivariant Moving Frame Method*. Preliminary report.

I will explain how to use the method of equivariant moving frames to solve local equivalence problems. The result is a method which avoids Cartan's iterative loop solution, does not require absorption of torsion and offers other distinctive advantages. (Received February 07, 2010)
