How to Teach Mathematics: a personal perspective

Steven G. Krantz, *Washington University, St. Louis, MO*

An original contribution to the educational literature on teaching mathematics at the post-secondary level. The book itself is an explicit proof of the author's claim "teaching can be rewarding, useful, and fun".

The MathResource™ Interactive Math Dictionary

Jonathan Borwein, *Simon Fraser University, Burnaby, BC, Canada*, Carolyn Watters, *Acadia University, Wolfville, NS, Canada*, and Ephraim Borowski, *University of Glasgow, Scotland*

I really like the interactive math dictionary. I have let some of my students use it for project work to try and get feedback from them. I have had only positive results. The most common response from the students seems to be "wow!" I mentioned that this software is available and probably would be a good idea that students entering Science/Math/Engineering at university have access to it.

I will also mention the software at teachers conferences etc. ... In my opinion, every Mathematics Department should have a copy available for the staff and students. A great reference/investigative item.

—*Paul Holder, Mathematics Department Head, St. John High School, New Brunswick, Canada*

Finally, coursework I can order for my students with no learning curve. The MathResource puts significant interactive math at their fingertips in 5 minutes.

On Being a Department Head, a Personal View

John B. Conway, *University of Tennessee, Knoxville*

An interesting and often humorous look at academic leadership ... reads like a work written by someone who truly has found his calling.

A Primer of Mathematical Writing

Steven G. Krantz, *Washington University, St. Louis, MO*

Krantz, a prolific and distinguished mathematical author, discourses engagingly (yet seriously) on the art and etiquette of virtually all types of writing an academic mathematician is likely to encounter ... Grammatical points, stylistic and typesetting issues, and the correct and effective use of mathematical notation are handled deftly and with good humor ... [Hopefully] senior faculty will consider it mandatory reading for graduate students and even upper-division undergraduates. An enjoyable way to learn some fundamentals of good mathematical writing. Highly recommended.
