A Classic

Surgery on Compact Manifolds

Second Edition

C. T. C. Wall,
University of Liverpool, England, and
A. A. Ranicki
(Editor),
University of Edinburgh, Scotland

The publication of this book in 1970

marked the culmination of a particularly exciting period in the history of the topology of manifolds. The world of high-dimensional manifolds had been opened up to the classification methods of algebraic topology by Thom's work in 1952 on transversality and cobordism, the signature theorem of Hirzebruch in 1954, and by the discovery of exotic spheres by Milnor in 1956.

The original edition of the book fulfilled five purposes by providing:

- a coherent framework for relating the homotopy theory of manifolds to the algebraic theory of quadratic forms, unifying many of the previous results;
- a surgery obstruction theory for manifolds with arbitrary fundamental group, including the exact sequence for the set of manifold structures within a homotopy type, and many computations;
- the extension of surgery theory from the differentiable and piecewise linear categories to the topological category;
- a survey of most of the activity in surgery up to 1970;
- a setting for the subsequent development and applications of the surgery classification of manifolds.

This new edition of this classic book is supplemented by notes on subsequent developments. References have been updated and numerous commentaries have been added. The volume remains the single most important book on surgery theory.
