

New and Noteworthy

Number Theory

Volume I: Tools and Diophantine Equations

Volume II: Analytic and Modern Tools

H. Cohen, Université Bordeaux I, Talence, France

The central theme of this book is the solution of Diophantine equations, i.e., equations or systems of polynomial equations which must be solved in integers, rational numbers or more generally in algebraic numbers. This theme, in particular, is the central motivation for the modern theory of arithmetic algebraic geometry. In this text, this is considered through three of its most basic aspects.

Vol. I: 2007. XXIII, 650 p. (Graduate Texts in Mathematics, Volume 239) Hardcover
ISBN 978-0-387-49922-2 ► **\$59.95**

Vol. II: 2007. XXIII, 596 p. (Graduate Texts in Mathematics, Volume 240) Hardcover
ISBN 978-0-387-49893-5 ► **\$59.95**

Linear Functional Analysis

B. P. Rynne, M. A. Youngson,
Heriot-Watt University,
Edinburgh, UK

This introduction to the ideas and methods of linear functional analysis shows how familiar and useful concepts from finite-dimensional linear algebra can be extended or generalized to infinite-dimensional spaces. Highlights of the second edition include - a new chapter on the Hahn-Banach theorem and its applications to the theory of duality. This chapter also introduces the basic properties of projection operators on Banach spaces, and weak convergence of sequences in Banach spaces; - topics that have applications to both linear and nonlinear functional analysis; - extended coverage of the uniform boundedness theorem; - plenty of exercises, with solutions provided at the back of the book.

2nd ed. 2007. Approx. 335 p. 6 illus. (Springer Undergraduate Mathematics Series)
Softcover
ISBN 978-1-84800-004-9 ► **approx. \$39.95**

Complex Analysis with Applications in Science and Engineering

H. Cohen, California State University, Los Angeles, USA

Complex Analysis with Applications in Science and Engineering weaves together theory and extensive applications in mathematics, physics and engineering. In this edition there are many new problems, revised sections, and an entirely new chapter on analytic continuation. This work will serve as a textbook for undergraduate and graduate students in the areas noted above.

2nd ed. 2007. XXVI, 486 p. 212 illus.
Hardcover
ISBN 978-0-387-73057-8 ► **approx. \$79.95**

Numerical Linear Algebra

G. Allaire, École Polytechnique Palaiseau, France; **S. M. Kaber**, Université Pierre et Marie Curie, Lab. Jacques-Louis Lions, France

This book distinguishes itself from the many other textbooks on the topic of linear algebra by including mathematical and computational chapters along with examples and exercises with Matlab. Using both Matlab and SciLab software, the book covers core standard material and contains an excellent variety of exercises. Scilab exercises are also included online. In recent years, the use of computers in many areas of engineering and science has made it essential for students to get training in numerical methods and computer programming.

2007. Approx. 400 p. Hardcover
ISBN 978-0-387-34159-0 ► **\$59.95**

The Arithmetic of Dynamical Systems

J. H. Silverman, Brown University, Providence, RI, USA

2007. XVI, 511 p. 11 illus. (Graduate Texts in Mathematics, Volume 241) Hardcover
ISBN 978-0-387-69903-5 ► **\$49.95**

Semiparallel Submanifolds in Space Forms

Ü. Lumiste, University of Tartu, Estonia

This book offers a comprehensive survey to date of the theory of semiparallel submanifolds. Introduced in 1985, semiparallel submanifolds have emerged as an important area of research within differential geometry and topology.

Lumiste begins with the necessary background on: symmetric and semisymmetric Riemannian manifolds, smooth manifolds in space forms, and parallel submanifolds. Semiparallel submanifolds are introduced in Chapter 4, where characterizations of their class and several subclasses are given. In later chapters Lumiste introduces the concept of main symmetric orbit and presents all known results concerning umbilic-like main symmetric orbits.

Semiparallel Submanifolds in Space Forms will appeal to both researchers and graduate students.

2008. Approx. 325 p. (Springer Monographs in Mathematics) Hardcover
ISBN 978-0-387-49911-6 ► **approx. \$79.95**

Mathematical Masterpieces

Further Chronicles by the Explorers

A. Knoebel, Albuquerque, NM, USA;
R. Laubenbacher, Virginia Bioinformatics Institute, Blacksburg, VA, USA; **J. M. Lodder**,
D. Pengelley, New Mexico State University, Las Cruces, NM, USA

By looking at original historical sources, the authors introduce advanced undergraduates to the excitement of mathematical discovery. Each chapter contains a different story anchored around a sequence of selected primary sources showcasing a masterpiece of mathematical achievement. There are numerous exercises and historical photographs.

2007. XII, 340 p. 75 illus., 2 in color.
