

NEW RELEASES for JMM 2008

Making Mathematics with Needlework

edited by sarah-marie belcastro and
Carolyn Yackel

\$30.00; Hardcover; January 2008

"This book demonstrates the interplay between mathematics and needlework, including stories of what happens when mathematicians turn to their hobbies but still continue to think about mathematics. I hope this book will encourage mathematicians to develop more tactile ways to explore abstract ideas and to make them more accessible to their students."

—DAINA TAIMINA, Adjunct Professor of
Mathematics, Cornell University

"How exciting it is for this knitting nerd to see a book that combines two loves of my life, math and needlework! This book makes it clear why they were natural partners all along. I wish this had been one of my textbooks when I was in school."

—NORAH GAUGHAN, author of *Knitting Nature*

The Presidential Election Game

Steven J. Brams

\$29.00; Paperback; January 2008

"Brams employs decision and game theory approaches to analyze the 'strategic, game-like features of presidential campaigning' . . . The examples are contemporary, the writing is crisp, and the insights are prodigious. In short, the reading is rewarding"

—*Library Journal*

"*The Presidential Election Game* could be a useful adjunct to a course on mathematical modeling. It can illustrate how even mathematically simple models can lead to useful conclusions, and it should stir up many ideas in the mind of the curious reader."

—*American Mathematical Monthly*
