Problem Solving Books

Mathematical Olympiad Treasures

TITU ANDREESCU, *The University of Texas at Dallas, Richardson, TX, USA*; BOGDAN ENESCU, *B.P. Hasdeu National College, Buzau, Romania*

"I took great pleasure in reading *Mathematical Olympiad Treasures*, by Titu Andreescu and Bogdan Enescu. This book is the fruit of the prodigious activity of two well-known creators of mathematics problems in various mathematical journals." —MAA ONLINE

2004/VI, 234 PP., 99 ILLUS./SOFTCOVER

CORNERSTONES Textbooks

Basic and Advanced Algebra

ANTHONY W. KNAPP, *State University of New York, Stony Brook, NY, USA*

"Finally, the author's notorious mastery style of writing, which stands out by its high degree of clarity, elegance, refinement, and accuracy, also rules over this newest textbook of his, which is very likely to become one of the great standard texts in algebra for generations."

Geometric Function Theory

Explorations in Complex Analysis

STEVEN G. KRANTZ, *Washington University, St. Louis, MO, USA*

"The presentations of the topics are clear and the text makes [for] very good reading; basic ideas of many concepts and proofs are carefully described, non-formal introductions to each chapter are very helpful, a rich collection of exercises is well composed and helps the student to understand the subject."

Additional Textbooks

A Geometric Approach to Differential Forms

DAVID BACHMAN, *Pitzer College, Claremont, CA, USA*

"[The author's] idea is to use geometric intuition to alleviate some of the algebraic difficulties...The emphasis is on understanding rather than on detailed derivations and proofs. This is definitely the right approach in a course at this level." —MAA REVIEWS

Approximation of Additive Convolution-Like Operators

Real C*-Algebra Approach

VICTOR D. DIDENKO, *University Brunei Darussalam, Brunei*; BERND SILBERMANN, *TU Chemnitz, Germany*

This book deals with numerical analysis for certain classes of additive operators and related equations, including singular integral operators with conjugation, the Riemann-Hilbert problem, Mellin operators with conjugation, double layer potential equation, and the Muskhelishvili equation. The authors propose a unified approach to the analysis of the approximation methods under consideration based on special real extensions of complex C*-algebras. The list of the methods considered includes spline Galerkin, spline collocation, qualocation, and quadrature methods.
