### Pseudo-Differential Operators

#### Theory and Applications

##### SERIES EDITOR:

MAN WAH WONG, York University, Toronto, ON, Canada

*Pseudo-Differential Operators: Theory and Applications* is a series of moderately priced graduate-level textbooks and

monographs. Viewed in a broad sense, pseudo-differential operators relate to topics such as harmonic analysis, PDEs, geometry, mathematical physics, microlocal analysis, time-frequency analysis, imaging and computations. This series highlights modern trends and novel applications of pseudo-differential operators in mathematics, natural sciences, medicine, scientific computing, and engineering.

### Quantization and Arithmetic

ANDRÉ UNTERBERGER, Université de Reims, France

The primary aim of this book is to create situations in which the zeta function, or other L-functions, will appear in spectral-theoretic questions. A secondary aim is to connect pseudo-differential analysis, or quantization theory, to analytic number theory. Both are attained through the analysis of operators on functions on the line by means of their diagonal matrix elements against families of arithmetic coherent states: these are families of discretely supported measures on the line, transforming in specific ways under the part of the metaplectic representation or, more generally, representations from the discrete series of  $\mathrm{SL}(2, \mathbb{R})$ , lying above an arithmetic group such as  $\mathrm{SL}(2, \mathbb{Z})$ .

ISBN 978-3-7643-8790-7/\$59.95

PSEUDO-DIFFERENTIAL OPERATORS, VOL. 1

#### Other forthcoming volumes:

### Global Pseudo-differential Calculus on Euclidean Spaces

ERNESTO BUZANO; LUIGI RODINO, both Università di Torino, Italia

ISBN 978-3-7643-8511-8/\$69.95 (TENT.)

### Pseudo-Differential Operators and Symmetries

#### Background Analysis and Advanced Topics

MICHAEL Ruzhansky, Imperial College, London, U.K.; VILLE TURUNEN, Helsinki University of Technology, Finland

ISBN 978-3-7643-8513-2/\$119.00 (TENT.)

### On Pseudodifferential Operators and Applications

NICOLAS LERNER, Université de Rennes, France

ISBN 978-3-7643-8509-5/\$99.00 (TENT.)

### D-Modules, Perverse Sheaves, and Representation Theory

RYOSHI Hotta, Okayama University of Science, Okayama, Japan; KIYOSHI TAKEUCHI, University of Tsukuba, Japan; TOSHIYUKI TANISAKI, Osaka City University, Osaka, Japan

Key to *D*-modules, *Perverse Sheaves*, and *Representation Theory* is the authors' essential algebraic-analytic approach to the theory, which connects *D*-modules to representation theory and other areas of mathematics. Significant concepts and topics that have emerged over the last few decades are presented, including a treatment of the theory of holonomic *D*-modules, perverse sheaves, the all-important Riemann–Hilbert correspondence, Hodge modules, and the solution to the Kazhdan–Lusztig conjecture using *D*-module theory.

2008/XII, 412 PP., 66 ILLUS./HARDCOVER

ISBN 978-0-8176-4363-8/\$89.95

PROGRESS IN MATHEMATICS, VOLUME 236

### Dimension and Recurrence in Hyperbolic Dynamics

LUIS BARREIRA, Universidade Técnica Lisboa, Portugal

The main objective of this book is to give a broad unified introduction to the study of dimension and recurrence in hyperbolic dynamics. It includes discussion of the foundations, main results, and main techniques in the rich interplay of four main areas of research: hyperbolic dynamics, dimension theory, multifractal analysis, and quantitative recurrence. It also gives a panorama of several selected topics of current research interest. All the results include detailed proofs, many of them simplified or reworked for this book.

2008/APPROX. 315 PP./HARDCOVER

ISBN 978-3-7643-8881-2/\$74.95

PROGRESS IN MATHEMATICS, VOLUME 272

### Growth Theory of Subharmonic Functions

VLADIMIR S. AZARIN, Bar Ilan University, Ramat Gan, Israel

In this book an account of the growth theory of subharmonic functions is given, which is directed towards its applications to entire functions of one and several complex variables. The presentation aims at converting the noble art of constructing an entire function with prescribed asymptotic behaviour to a handicraft. All necessary material is developed within the book, hence it will be most useful as a reference book for the construction of entire functions.

BIRKHÄUSER ADVANCED TEXTS

### Introduction to Probability with Statistical Applications

GEZA SCHAY, University of Massachusetts, Boston, MA, USA

*Introduction to Probability with Statistical Applications* targets non-mathematics students, undergraduates and graduates, who do not need an exhaustive treatment of the subject. While the presentation is rigorous and contains theorems and proofs, linear algebra is largely avoided and only a minimal amount of multivariable calculus is needed.

2007/X, 318 PP., 44 ILLUS./SOFTCOVER

ISBN 978-0-8176-4497-0/\$39.95

### Frames and Bases

#### An Introductory Course

OLE CHRISTENSEN, Technical University of Denmark, Lyngby, Denmark

Based on a streamlined presentation of the author's previous work, *An Introduction to Frames and Riesz Bases*, this new textbook fills a gap in the literature, developing frame theory as part of a dialogue between mathematicians and engineers. Newly added sections on applications will help mathematically oriented readers to see where frames are used in practice and engineers to discover the mathematical background for applications in their field. The primary focus of the work is on basic topics without too many side remarks making it easier for students to follow the presentation.

2008/APPROX. 335 PP., 14 ILLUS./HARDCOVER

ISBN 978-0-8176-4677-6/\$49.95

APPLIED AND NUMERICAL HARMONIC ANALYSIS

### Group-based Cryptography

ALEXEI MYASNIKOV, McGill University, Montreal, QC, Canada; VLADIMIR SHPILRAIN, The City College of New York, NY, USA; ALEXANDER USHAKOV, Stevens Institute of Technology, Hoboken, NJ, USA

This book examines relations among three different areas of mathematics and theoretical computer science: combinatorial group theory, cryptography, and complexity theory.

**Key features:** first monograph that explores the area of "non-commutative cryptography"; employs decision problems (as opposed to search problems) in public key cryptography, which allows for the construction of cryptographic protocols with new properties; provides a rigorous mathematical justification of security for protocols based on infinite groups, as an alternative to the security model known as semantic security.
