

Certificate in Quantitative Finance

A six-month program for mathematicians and scientists wanting to leverage their skills as "quants" in investment banking or hedge funds.

Considering a career move into finance?

Not using your math skills in your current position?

The CQF is an intensive mathematical finance program consisting of formal lectures and workshops delivering the necessary knowledge base and skills needed to succeed in the fast-paced environment of the financial markets.

The fastest-growing Quantitative Finance program in the world. Delivered by leading practitioners and led by Dr Paul Wilmott.

Programs are designed for professionals and delivered on a part-time basis via 2.5 hr sessions.

All classroom sessions are recorded so delegates have the option of studying in their own time and repeating the classes as often as they wish – all modules are fully supported by programming workshops.

Delegates can access the course from anywhere in the world. The CQF Alumni Network represents an exclusive global community of quantitative practitioners.

To find out more about the CQF, book your place at one of our International Information Sessions presented by Paul Wilmott by emailing CQF@7city.com.

London	18th September	NYC Midtown	6th November
