EMS Textbooks in Mathematics

Tammo tom Dieck
Algebraic Topology

ISBN 978-3-03719-048-7. September 2008
578 pages. Hardcover. 16.5 x 23.5 cm
78.00 US\$

This textbook on algebraic topology covers the material for introductory courses (homotopy and homology), background material (manifolds, cell complexes, fibre bundles), and more advanced applications of the basic tools and concepts (duality, characteristic classes, homotopy groups of spheres, bordism). A special feature is the rich supply of nearly 500 exercises and problems at the end of each section. Prerequisites are basic point set topology (as recalled in the first chapter), some acquaintance with basic algebra (modules, tensor product), and some terminology from category theory. The aim of the book is to introduce advanced undergraduate and graduate (masters) students to the basic tools, concepts and results of algebraic topology. Sufficient background material from geometry and algebra is included.

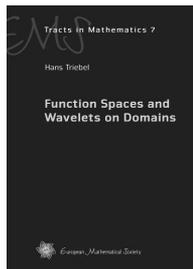

EMS Tracts in Mathematics Vol. 6

Erich Novak, Henryk Woźniakowski
**Tractability of
Multivariate Problems**
Volume I: Linear Information

ISBN 978-3-03719-026-5. September 2008
395 pages. Hardcover. 17.0 x 24.0 cm
98.00 US\$

This is the first of a three-volume set comprising a comprehensive study of the tractability of multivariate problems. It is of interest for researchers working in computational mathematics, especially in approximation of high-dimensional problems, but may be also suitable for graduate courses and seminars.

EMS Tracts in Mathematics Vol. 7

Hans Triebel
**Function Spaces
and Wavelets on Domains**

ISBN 978-3-03719-019-7. September 2008
265 pages. Hardcover. 17.0 x 24.0 cm
78.00 US\$

The book is addressed to two types of readers: researchers in the theory of function spaces who are interested in wavelets as new effective building blocks for functions, and scientists who wish to use wavelet bases in classical function spaces for various applications.
