Crocheting Adventures with Hyperbolic Planes
Daina Taimiņa

\$35.00; Hardcover

“I must say that the title of Daina Taimiņa’s book is a bit misleading, since it’s far from being only about hyperbolic planes

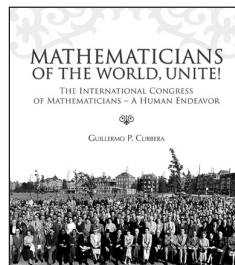

and crocheting. It does indeed contain simple and beautifully illustrated explanations of those two subjects, along with scholarly histories of both of them. However, it does the same for many other parts of art and science and mathematics, and all this in a beautifully simple and simply beautiful book.”

—John H. Conway, Princeton University, author of *The Symmetries of Things*

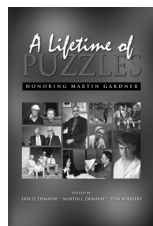

Mathematicians of the World, Unite!
The International Congress of Mathematicians—A Human Endeavor
Guillermo P. Curbera

“I welcome this book and hope it will inspire international cooperation without politics and promote curiosity and interest in the whole area of mathematics.”

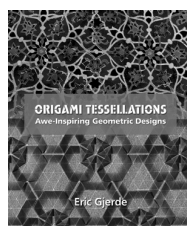

—Lennart Carleson, Royal Institute of Technology, Sweden
