

# Do the Math

## Mrs. Perkins's Electric Quilt

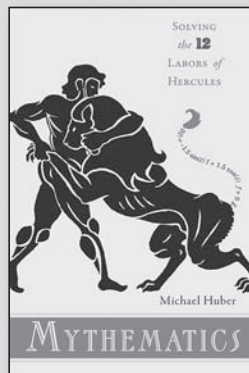

And Other Intriguing Stories of Mathematical Physics

Paul J. Nahin

"If you like mathematics, you will love this book. If you like physics, you will love it even more. A treasure trove for students of any age, and a marvelous resource for teachers."

—Kenneth W. Ford, author of *The Quantum World*

Cloth \$29.95 978-0-691-13540-3

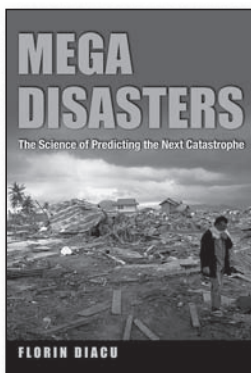

## Mythematics

Solving the Twelve Labors of Hercules  
Michael Huber

"Michael Huber ingeniously introduces many elementary mathematical and physical problems in this fascinating book. Who knew Greek mythology could be so mathematical!"

—John Adam, coauthor of *Guesstimation*

Cloth \$24.95 978-0-691-13575-5

## Megadisasters

The Science of Predicting the Next Catastrophe

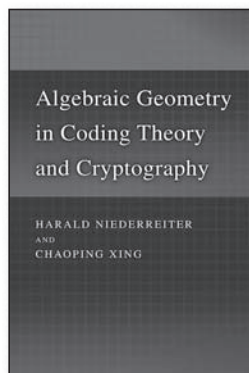

Florin Diacu

"Like a scientific detective, Diacu presents a riveting account of spine-chilling megadisasters facing our civilization, ranging from abrupt climate change to killer comets and the collapse of the world's financial system. This book held me totally spellbound."

—Edward Belbruno, author of *Fly Me to the Moon*

Cloth \$24.95 978-0-691-13350-8

For sale only in the United States, Canada, & Mexico

## Algebraic Geometry in Coding Theory and Cryptography

Harald Niederreiter & Chaoping Xing

This textbook equips graduate students and advanced undergraduates with the necessary theoretical tools for applying algebraic geometry to information theory, and it covers primary applications in coding theory and cryptography. The authors provide the first detailed discussion of the interplay between nonsingular projective curves and algebraic function fields over finite fields.

Cloth \$45.00 978-0-691-10288-7

## Outer Billiards on Kites

Richard Evan Schwartz

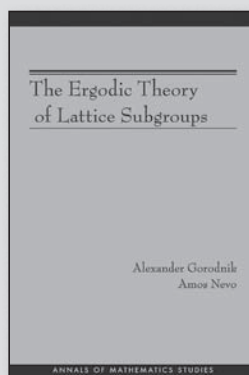

The Moser-Neumann question is an idealized version of the question of whether, because of small disturbances in its orbit, the Earth can break out of its orbit and fly away from the Sun. In *Outer Billiards on Kites*, Richard Schwartz presents his affirmative solution to the Moser-Neumann problem. He shows that an outer billiards system can have an unbounded orbit when defined relative to any irrational kite.

*Annals of Mathematics Studies*, 171

## The Ergodic Theory of Lattice Subgroups

Alexander Gorodnik & Amos Nevo

Here, Alexander Gorodnik and Amos Nevo develop a systematic general approach to the proof of ergodic theorems for a large class of non-amenable locally compact groups and their lattice subgroups.
