“Exam-Hell” in Korea

Kang-Tae Kim

Perhaps you have heard of the terminology “Entrance-Exam Hell”. Yes, it is the term that describes the “rigor” of the entrance exam to colleges and universities in certain Asian countries. The Korean term “Ji-ok” in this “Ip-si-jì-ok” (entrance-exam-hell) is translated to mean “hell”. But perhaps the more correct translation may be “dungeon”, in the sense that it does not carry any religious connotations and that the term just indicates an environment that is very difficult for anyone to survive.

Whatever the correct translation may be, “exam-hell” is the stage a young student goes through in order to enter a good university. All young Korean students know very well that, sooner rather than later, they have to be drawn into the dark mouth of exam-hell! They also know what “rigor”—read: difficult and harsh test—is waiting for them in exam-hell. In fact, a large part of the exam is national and standardized, whose contents are officially required by the Ministry of Education (MOE), one of the more important government agencies in Korea.

The exams and the curriculum leading up to them are national and standardized. Once the exam contents are announced, not only does the “power of exam-hell” reign over the lives of young Korean students, but it also shakes the whole of Korean society. Young students have to plan for their futures accordingly, and parents and all senior members of the family have to consider carefully what they can do for their delicate young. For better or for worse, the future of their young members of our cohort is, by and large, the future of the family.

The power of exam-hell is suffocating. Koreans feel that the preparation time is insufficient. Pressured young souls sometimes feel an urge to ask, “Why? Do I/we have to go through exam-hell? I mean, may I ask why I should?” The question is not forbidden, at least not in principle; but it is in real life. Grown-ups will immediately say, “No time to waste on such questions! Save time to study more.” Yes, it is madness. But in Korean society—in which “obedience to seniors” is still a virtue—good girls and boys swallow their fireball deep down and walk, bravely, into the path leading eventually toward the mouth of exam-hell.

I fortunately teach at POSTECH, one of the most prestigious institutions in Korea. So I get to meet the most successful students who come through exam-hell in the freshman classes. Yes, they are good! They have mastered the basic concepts and techniques from first-year calculus—differentiation and integration of elementary functions, including some transcendental functions, and even some techniques of integration. The majority of them are ready, without fear, to learn ordinary differential equations, calculus of functions in several variables, and linear algebra. They are ready to absorb new, challenging knowledge. This is admirable! In fact, I remember the conversations I had with several prominent French colleagues on various occasions. They studied the Korean system of education in some of their national committees! I confirmed their finding, saying, “Yes, almost all Korean universities have a rigorous selection process for their entering freshmen.” And they said, approvingly, “Fantastique!” They really admired that part of the Korean system. In this regard, exam-hell can be a system that even a more advanced country can envy.

There seems to be nothing in this world that is just “good”. While exam-hell produces these “able

In Korea, entrance-exam-hell is generally understood as “evil”. MOE’s present intention seems to be to change it into a system similar to that of the United States, namely, each university runs an American-style admissions office. I wonder if they have considered the fact that Korea may be quite different. Last year POSTECH ran such a new system; I was amazed at reading the resumes of the applicants. They may not be going through the old exam-hell, but they are driven to perform many other new things—it is a new exam-hell. It is unthinkable for me and for anyone to insist that the old exam-hell is ideal. But this is the year 2010 and, to Koreans and to anyone, the systems of the more advanced countries are no longer a hidden secret. It is high time to study ourselves and the other systems carefully—together to build a good outcome for all of our youngsters. After all, they are our future, are they not?

Acknowledgments: I thank Professor Michael Fowler, Ed. D., at Handong Global University (in Pohang, Korea) for showing me some of his research results and sharing views.

Salary and Fringe Benefits
Salary will be highly competitive, commensurate with qualifications and experience. The University offers a comprehensive fringe benefit package, including medical care, plus a contract-end gratuity for appointment(s) of two years or longer, and housing benefits for eligible appointee(s). Further information about the University and the general terms of service for appointments is available at http://www.cuhk.edu.hk/personnel. The terms mentioned herein are for reference only and are subject to revision by the University.

Application Procedure
Please send full resume, copies of academic credentials, a publication list and/or abstracts of selected published papers, together with names, addresses and fax numbers/e-mail addresses of three referees to whom the applicants’ consent has been given for their providing references (unless otherwise specified), to the Personnel Office, The Chinese University of Hong Kong, Shatin, N.T., Hong Kong (Fax: (852) 2696 1462) by the closing date. The Personal Information Collection Statement will be provided upon request. Please quote the reference number and mark “Application - Confidential” on cover.
