
The Pythagorean Theorem

A 4,000-Year History

Eli Maor

"This excellent biography of the theorem is like a history of thought written in lines and circles, moving from ancient clay tablets to Einstein's blackboards. . . . There is something intoxicating about seeing one truth revealed in so many ways. It all makes for hours of glorious mathematical distraction."

Nonplussed!

Mathematical Proof of Implausible Ideas

Julian Havil

"*Nonplussed!* is a collection of lovely paradoxes: facts that are provable logically but are nevertheless seriously counterintuitive."

Introduction to Ramsey Spaces

Stevo Todorcevic

Introduction to Ramsey Spaces presents in a systematic way a method for building higher-dimensional Ramsey spaces from basic one-dimensional principles. It is the first book-length treatment of this area of Ramsey theory, and emphasizes applications for related and surrounding fields of mathematics, such as set theory, combinatorics, real and functional analysis, and topology.
