

Do the Math

Nine Algorithms That Changed the Future

The Ingenious Ideas That Drive Today's Computers

John MacCormick

With a foreword by Chris Bishop

"MacCormick clearly explains some of the algorithms used by hundreds of millions of people daily. Not the simple algorithms like arithmetic and sorting, but more complex things such as how to determine the importance of web pages, if and when we are justified in trusting a computer-mediated conversation with another person, and the puzzling issue of what *cannot* be computed."

—Chuck Thacker, winner of the 2010 Turing Award

Elliptic Tales

Curves, Counting, and Number Theory
Avner Ash & Robert Gross

"Assuming only what every mathematically inclined freshman should know, this book leads the reader to an understanding of one of the most important conjectures in current number theory—whose proof is one of the Clay Mathematics Institute's million-dollar prize problems. The book is carefully and clearly written, and can be recommended without hesitation."

—Peter Swinnerton-Dyer, University of Cambridge

In Pursuit of the Traveling Salesman

Mathematics at the Limits of Computation

William J. Cook

"A gripping insider's account of one of the great mathematical problems. This book shows how deep mathematical insights can arise from apparently simple questions, and how the results can be applied to that most human of objectives: to achieve a desired outcome in the best possible way. *In Pursuit of the Traveling Salesman* deserves to become an instant classic."

—Ian Stewart, author of *Professor Stewart's Hoard of Mathematical Treasures*

Circles Disturbed

The Interplay of Mathematics and Narrative

Edited by Apostolos Doxiadis & Barry Mazur

"This collection is a pioneering effort to trace the hidden connections between mathematics and narrative. It succeeds magnificently, and represents a very significant contribution that will appeal to the professional mathematician as well as the general educated reader. The articles are written by top authorities in their fields."

—Doron Zeilberger, Rutgers University

Symmetric Markov Processes, Time Change, and Boundary Theory

Zhen-Qing Chen

& Masatoshi Fukushima

This book gives a comprehensive and self-contained introduction to the theory of symmetric Markov processes and symmetric quasi-regular Dirichlet forms. In a detailed and accessible manner, the authors cover the essential elements and applications of the theory of symmetric Markov processes, including recurrence/transience criteria, probabilistic potential theory, additive functional theory, and time change theory.

The Ambient Metric

Charles Fefferman

& C. Robin Graham

This book develops and applies a theory of the ambient metric in conformal geometry. This is a Lorentz metric in $n+2$ dimensions that encodes a conformal class of metrics in n dimensions. The ambient metric has an alternate incarnation as the Poincaré metric, a metric in $n+1$ dimensions having the conformal manifold as its conformal infinity. In this realization, the construction has played a central role in the AdS/CFT correspondence in physics.
