

# Do the Math

*Dana Mackenzie, Winner of the 2012 Joint Policy Board for Mathematics Communications Award*

## The Universe in Zero Words

The Story of Mathematics as Told through Equations

*Dana Mackenzie*

“Dana Mackenzie is a very good writer. I was constantly amazed at his ability to describe complicated mathematics in a few sentences in a way that the average reader—not the average mathematician or the average math major, but the average reader—can understand.”

—David S. Richeson, author of *Euler’s Gem*

Cloth \$27.95 978-0-691-15282-0

## A Wealth of Numbers

An Anthology of 500 Years of Popular Mathematics Writing  
*Edited by Benjamin Wardhaugh*

“This accessible and inviting anthology shows how entertaining it can be to think about mathematics. The selection, organization, and commentaries result in a unique book that is equal to far more than the sum of its parts.”

—Paul C. Pasles, author of *Benjamin Franklin’s Numbers*

Cloth \$45.00 978-0-691-14775-8

*Winner of the 2010 Euler Book Prize, Mathematical Association of America*

## Euler’s Gem

The Polyhedron Formula and the Birth of Topology

*David S. Richeson*

“The author has achieved a remarkable feat, introducing a naïve reader to a rich history without compromising the insights and without leaving out a delicious detail.”

—*Choice*

Paper \$16.95 978-0-691-15457-2

## Numerical Methods

Design, Analysis, and Computer Implementation of Algorithms

*Anne Greenbaum & Timothy P. Chartier*

“This is an excellent introduction to the exciting world of numerical analysis. Fulfilling the need for a modern textbook on numerical methods, this volume has a wealth of examples that will keep students interested in the material.”

—Michele Benzi, Emory University

Cloth \$95.00 978-0-691-15122-9

## Mumford-Tate Groups and Domains

Their Geometry and Arithmetic

*Mark Green, Phillip A. Griffiths & Matt Kerr*

Mumford-Tate groups are the fundamental symmetry groups of Hodge theory, a subject which rests at the center of contemporary complex algebraic geometry. This book is the first comprehensive exploration of Mumford-Tate groups and domains. Containing basic theory and a wealth of new views and results, it will become an essential resource for graduate students and researchers.

Paper \$75.00 978-0-691-15425-1  
Cloth \$165.00 978-0-691-15424-4

## Some Problems of Unlikely Intersections in Arithmetic and Geometry

*Umberto Zannier*

*With appendixes by David Masser*

This book considers the so-called Unlikely Intersections, a topic that embraces well-known issues, such as Lang’s and Manin-Mumford’s, concerning torsion points in subvarieties of tori or abelian varieties. More generally, the book considers algebraic subgroups that meet a given subvariety in a set of “unlikely” dimension.
