## The Statistical Theory of Linear Systems

E. J. Hannan and Manfred Deistler

*Classics in Applied Mathematics 70*

Originally published in 1988, this book deals with identification (in the sense of obtaining a model from data) of multi-input and multi-output linear systems, in particular systems in ARMAX and state space form. This edition includes an extensive new introduction that outlines central ideas and features of the subject matter, as well as developments since the book's original publication.

## Linear and Nonlinear Inverse Problems with Practical Applications

Jennifer L. Mueller and Samuli Siltanen

*Computational Science and Engineering 10*

This new textbook explains how to identify ill-posed inverse problems arising in practice and how to design computational solution methods for them; explains computational approaches in a hands-on fashion, with related codes available on a website; and serves as a convenient entry point to practical inversion. It is the only mathematical textbook with a thorough treatment of electrical impedance tomography, and these sections are suitable for beginning and experienced researchers in mathematics and engineering.

## Physics and Partial Differential Equations, Volume I

Tatsien Li and Tiehu Qin,

Translated by Yachun Li

This classic title bridges physics and applied mathematics in a manner that is easily accessible to readers with an undergraduate-level background in these disciplines. Readers who are more familiar with mathematics than physics will discover the connection between various physical and mechanical disciplines and their related mathematical models.

Readers who are more familiar with physics than mathematics will benefit from in-depth explanations of how PDEs work as effective mathematical tools to more clearly express and present the basic concepts of physics.

## Control and Optimization with Differential-Algebraic Constraints

Edited by Lorenz T. Biegler, Stephen L.

Campbell, and Volker Mehrmann

*Advances in Design and Control 23*

Readers will find the most recent theory for the optimal control of differential-algebraic equations, along with several state-of-the-art numerical methods and real-world applications, all presented in a readable fashion so the results are accessible to the widest audience.

## From Vector Spaces to Function Spaces: Introduction to Functional Analysis with Applications

Yutaka Yamamoto

This treatment of analytical methods of applied mathematics starts with a review of the basics of vector spaces and brings the reader to an advanced discussion that includes the latest applications to systems and control theory. The text is designed to be accessible to those not familiar with the material and useful to working scientists, engineers, and mathematics students.

2012 • xiv + 268 pages • Hardcover • 978-1-611972-30-6  
List Price \$89.00 • SIAM Member Price \$62.30 • OT127
