

Do the Math

Math Bytes

Google Bombs, Chocolate-Covered Pi, and Other Cool Bits in Computing

Tim Chartier

“A magnificent and curious romp through a wonderful array of mathematical topics and applications: maze creation, Google’s PageRank algorithm, doodling, the traveling salesman problem, math on *The Simpsons*, Fermat’s Last Theorem, viral tweets, fractals, and so much more. Buy this book and feed your brain.”

—Clifford A. Pickover, author of *The Math Book*

Cloth \$24.95 978-0-691-16060-3

Everyday Calculus

Discovering the Hidden Math All around Us

Oscar E. Fernandez

“With a clear style and refreshing approach, this book shows how elementary calculus is relevant to practical day-to-day events familiar to us all.”

—John Adam, author of *X and the City: Modeling Aspects of Urban Life*

“A fun and delightful read.”

—Thomas Garrity, Williams College

Cloth \$24.95 978-0-691-15755-9

Enlightening Symbols

A Short History of Mathematical Notation and Its Hidden Powers

Joseph Mazur

“*Enlightening Symbols* explains the origins of symbols used in mathematics. But this fun book is so much more than this. Filled with interesting stories, captivating material, and delightful observations, it offers readers a better understanding of the nature of mathematics and a wonderful overview of mathematical history.”

—Dominic Klyve, Central Washington University

Cloth \$29.95 978-0-691-15463-3

Introduction to Computational Science

Modeling and Simulation for the Sciences

Second Edition

Angela B. Shiflet & George W. Shiflet

“[This book] has been carefully and thoughtfully written with students clearly in mind.”

—William J. Sater, *MAA Reviews*

“A masterpiece. I know of nothing comparable. I give it five stars.”

—James M. Cargal, *UMAP Journal*

Cloth \$99.50 978-0-691-16071-9

Chow Rings, Decomposition of the Diagonal, and the Topology of Families

Claire Voisin

In this book, Claire Voisin provides an introduction to algebraic cycles on complex algebraic varieties, to the major conjectures relating them to cohomology, and even more precisely to Hodge structures on cohomology.

Annals of Mathematics Studies, 187

Phillip A. Griffiths, John N. Mather, and Elias M. Stein, Series Editors

Hangzhou Lectures on Eigenfunctions of the Laplacian

Christopher D. Sogge

This book introduces eigenfunctions on Riemannian manifolds.

Christopher Sogge gives a proof of the sharp Weyl formula for the distribution of eigenvalues of Laplace-Beltrami operators, as well as an improved version of the Weyl formula, the Duistermaat-Guillemin theorem under natural assumptions on the geodesic flow.
